NITHISH GOLLAPAPANI

DevOps Engineer

Location: Los Angeles, CA | **Phone:** (747) 366-0412 | **Email:** nithishgollapapani@gmail.com | LinkedIn | GitHub

SUMMARY

- DevOps Engineer with over 4+ years of experience in managing cloud infrastructures, automation, and CI/CD pipeline creation.
- Expertise in cloud platforms including AWS, Microsoft Azure, and Google Cloud Platform (GCP), ensuring high availability and scalability across multi-cloud environments.
- Proven experience in containerization and orchestration with Docker and Kubernetes for seamless deployment and scaling of microservices.
- Skilled in building and optimizing CI/CD pipelines using tools like Jenkins, GitLab CI, CircleCI, and Azure DevOps for rapid application delivery and updates.
- Strong background in cloud automation with Terraform and CloudFormation for Infrastructure as Code (IaC), ensuring efficient and consistent infrastructure management.
- Experienced in monitoring and logging using tools like Prometheus, Grafana, ELK Stack, and Datadog, enabling real-time system insights and proactive issue resolution.
- Familiar with security management using Vault, Key cloak, and OAuth, ensuring secure application integration and compliance with industry standards.
- Adept in agile methodologies, using Jira, Confluence, and Slack for efficient collaboration with cross-functional teams and successful project delivery.
- Demonstrated success in optimizing systems, including AI-driven projects like Supply Chain Optimization, with a focus on performance, cost-efficiency, and scalability.

SKILLS

- **Programming Languages**: Python, Go, Bash, Shell scripting, Java, C, C++, Golang
- **Cloud Platforms**: AWS: (EC2, IAM, S3, EBS, EFS, SDK, EKS, ECR, ECS, RDS, DynamoDB, Aurora, Lambda, CloudWatch, Step Functions, SQS, SNS, CloudTrail), Microsoft Azure: (Azure DevOps, Azure Pipelines, Azure Repos, Azure Kubernetes Service (AKS), Azure Functions, Azure Logic Apps, Azure Monitor, Azure App Service, Azure Key Vault, Azure Blob Storage, Azure Virtual Machines, Azure Cosmos DB, Azure SQL Database, Azure Active Directory, Azure Application Insights), Google Cloud Platform: (Google Kubernetes Engine, Cloud Build, Cloud Run, Cloud Functions, Cloud Storage)
- **Containerization & Orchestration**: Docker, Kubernetes, OpenShift, Docker Swarm
- **CI/CD Tools**: Jenkins, GitLab CI, Travis CI, CircleCI, Maven, Gradle
- **Version Control Systems**: Git, GitHub, GitLab, Bitbucket, SVN
- **Monitoring & Logging Tools**: Prometheus, Grafana, Nagios, Datadog, ELK Stack (Elasticsearch, Logstash, Kibana), Splunk
- **Infrastructure Automation & Configuration Management**: Ansible, Chef, Puppet, Salt Stack, Vagrant
- **Operating Systems**: Linux (Red Hat, Ubuntu, CentOS), Windows Server
- **Networking & Security**: TCP/IP, DNS, VPN, Vault, Key cloak, OAuth, firewalls, security groups
- **Databases**: MySQL, PostgreSQL, Oracle, MongoDB, Cassandra, Redis
- **Automation & Configuration Management**: CloudFormation, Terraform
- **Collaboration & Agile Tools**: Jira, Confluence, Slack, PagerDuty
- **Networking & Load Balancing**: NGINX, HAP Roxy
- **Other Skills**: Kubernetes Helm charts, Microservices, SDLC, Hybrid/Multi-cloud environments

WORK EXPERIENCE

DXC Technology — **January 2024 – Present**

DevOps Engineer

- Spearheaded the Cloud Migration for Financial Services initiative, transitioning core banking systems to a multi-cloud setup across AWS, Azure, and GCP, enhancing system reliability and reducing downtime by 30%.
- Engineered containerized solutions with Docker and orchestrated them using Kubernetes on EKS and GKE, enabling seamless deployment and improved system performance.
- Automated infrastructure provisioning and deployments using Terraform and CloudFormation, ensuring efficient management and minimal manual configuration.
- Designed and managed CI/CD workflows with Jenkins and Azure DevOps, accelerating the release cycles and improving software delivery consistency.
- Set up comprehensive monitoring and log management through Prometheus, Grafana, and ELK Stack, enabling real-time insights and proactive issue resolution.
- Integrated Vault and Key cloak to manage secure authentication and access control, enhancing the overall security posture of cloud-based applications.
- Collaborated with cross-functional teams using tools like Jira, Confluence, and Slack, driving agile project management and efficient communication.
- Delivered continuous support for cloud infrastructure, optimizing resource allocation and implementing cost-effective strategies to maximize performance.

DXC Technology **July 2023 – Dec 2023**
DevOps Engineer - intern

- Spearheaded the development of a centralized log aggregation system using the ELK Stack (Elasticsearch, Logstash, Kibana) to enhance multi-cloud visibility and accelerate issue resolution.
- Configured Prometheus and Datadog for real-time system monitoring, enabling early detection of incidents and reducing response times.
- Automated log ingestion and structuring through Logstash and Fluentd, optimizing data pipelines for efficient analysis.
- Built custom Grafana dashboards to provide live system health metrics and integrated alerting mechanisms for rapid response to critical events.
- Optimized log retention and storage strategies by implementing AWS S3 lifecycle rules, ensuring efficient cost management while maintaining compliance.

Infosys **Jan 2020 – July 2022**
DevOps Engineer

- Worked on the Supply Chain Optimization using AI and implementing cloud solutions to enhance inventory management and demand forecasting using machine learning models and real-time data analytics, reducing inventory forecasting errors by 25%.
- Automated infrastructure provisioning using Terraform and CloudFormation, ensuring seamless deployment of AI models and associated applications in the cloud.
- Leveraged AWS EC2 for scalable compute instances to run AI algorithms and S3 for data storage, enabling faster data processing and analytics.
- Utilized Microsoft Azure DevOps and Azure Functions to implement automated workflows for continuous integration and delivery of AI models and cloud applications.
- Containerized legacy applications with Docker and orchestrated containers using Kubernetes to streamline deployment and scaling of microservices supporting AI models.
- Developed and maintained CI/CD pipelines using Jenkins, GitLab CI, and Travis CI, ensuring continuous delivery of code updates and AI models to cloud environments.
- Implemented centralized logging and monitoring using Nagios, Datadog, and ELK Stack for real-time insights into the performance of AI models and cloud infrastructure.
- Applied OAuth for secure integrations between various cloud applications, ensuring data security and compliance with industry standards in the supply chain optimization process.
- Collaborated with cross-functional teams using GitHub and GitLab for version control, enabling seamless code management and collaboration in a multi-cloud environment.

PROJECTS

Containerized Microservices Deployment for Media Platform

- Containerized legacy monolithic applications and migrated them to microservices architecture using Docker and orchestrated using Kubernetes on AWS EKS.
- Utilized Jenkins and CircleCI for continuous integration, enabling automated testing and deployment of microservices in the cloud environment.
- Integrated Prometheus and Grafana for monitoring and visualizing containerized applications, ensuring the media platform's performance met SLAs.

Multi-cloud Data Integration for Retail Analytics

- Managed a multi-cloud environment using AWS S3, Azure Blob Storage, and Google Cloud Storage to centralize retail data for analytics processing.
- Designed and implemented CloudFormation and Terraform for Infrastructure as Code (IaC), ensuring the infrastructure is consistent and scalable across multiple cloud platforms.
- Employed Maven and Gradle for building automation, optimizing data processing pipelines in the retail analytics environment.

IoT Data Processing for Smart City Project

- Deployed and orchestrated IoT devices using Kubernetes for real-time data collection and processing, enabling insights for smart city infrastructure management.
- Managed cloud environments with AWS EC2 and Azure IoT Hub, ensuring smooth operation and data flow from IoT sensors to cloud storage.
- Integrated Elasticsearch and Kibana to visualize IoT data and perform real-time analytics, enabling city administrators to optimize resources and operations.

EDUCATION

California State University Northridge **Aug 2022 – Dec 2023**
Master of Science in Computer Science
Sreenidhi Institute of Science and Technology **Aug 2017 – May 2021**
Bachelor of Technology in Computer Science

CERTIFICATIONS

- **Certified Kubernetes Administrator (CKA)** – The Linux Foundation **April 2023**
- **AWS Certified Solutions Architect - Associate** – AWS **August 2023**
