Sathvika Gottam

SOFTWARE DEVELOPMENT ENGINEER

NJ, USA | Mobile: (347) 509-5046 | sathvikareddyg7@gmail.com

SUMMARY

- Software Developer with 4+ years of experience in developing robust, scalable applications for fintech and e-commerce sectors.
- Expertise in Java, Spring Boot, and React/Angular for full-stack development, with a proven track record of optimizing system performance and enhancing user experience.
- Proficient in designing and implementing microservices architectures, resulting in significant improvements in processing times and system scalability.
- Strong experience with AWS services including EC2, S3, and Lambda, for building efficient and cost-effective cloud-based solutions.
- Skilled in database management and optimization, working with MySQL, MongoDB, and implementing ORM technologies like Hibernate to enhance query performance.
- Adept at developing and integrating RESTful APIs, improving system interoperability and facilitating seamless data exchange between components.
- Strong background in data processing and analysis, utilizing technologies like Kafka for real-time data streaming and implementing machine learning models for predictive analytics.
- Experienced in Agile methodologies, CI/CD practices, and DevOps tools such as Jenkins, Docker, and Kubernetes for streamlined development and deployment processes.

SKILLS

Programming Languages:	Core Java, C, C++, SQL, C#
Frameworks:	Struts, Hibernate, Spring Boot, Spring Batch, Spring Security, Spring AOP, Spring Core, Spring IOC, Angular 12, jQuery, Node.js, React.js, Express.js
Web Technologies:	HTML, HTML5, CSS/CSS3, AJAX, jQuery, Bootstrap, XML, JSON, UI Material, SASS, Typescript, ES6, Redux, React Hooks, REST API, RESTful API
Java/J2EE Technologies:	Servlets, Spring, EJB, JPA, JTA, JDBC, JSP, JSTL, Webservices, Microservices, Spring MVC, Hibernate, ORM
Database:	Oracle SQL, MySQL, MongoDB, PostgreSQL, PL/SQL, DynamoDB
Cloud Platforms:	Amazon Web Services
IDEs:	Visual Studio Code, Eclipse IDE, IntelliJ IDEA, Spring Tool Suite (STS)
Web/Application Servers:	Oracle WebLogic, IBM WebSphere, Apache Tomcat 8.0, Apache Tomcat, JBoss
Testing Tools:	JUnit, Mockito, Selenium
Build/ Other Tools:	Maven, Gradle, ANT, Jenkins, Docker, Kubernetes, SOAP/REST API, Postman, Jira, SonarQube, Kafka, Jupyter
Methodologies:	SDLC, Agile, Waterfall, SCRUM
Version Control:	Git, GitHub, SVN, Bitbucket
Operating System:	Windows, Linux, Mac OS

EXPERIENCE

Software Engineer | JP Morgan & Chase CO., NJ **Oct 2023 – Present**

- Designed and implemented highly scalable, independent microservices in Java, utilizing Spring Boot for rapid deployment and configuration, ensuring efficient transaction workflows and system modularity.
- Employed Hibernate for object-relational mapping, streamlining the integration of Java objects with the MySQL database, resulting in a 20% improvement in query performance and faster data access.
- Built dynamic, user-friendly interfaces using Angular, ensuring a seamless and responsive experience, which improved user interaction speeds by 15% through optimized component loading and rendering.
- Leveraged Apache Kafka to handle real-time data streams, ensuring the system processed high-frequency financial transactions with minimal latency, maintaining near-zero delays for critical operations.
- Integrated AWS Lambda for executing event-driven, serverless functions, reducing infrastructure overhead by 30%

and allowing the system to scale dynamically during peak usage.

- Utilized Docker to containerize application components, improving the deployment process by 40%, enabling seamless scaling and reducing environment-related issues during deployment.
- Conducted full-stack performance optimizations, including backend API tuning and front-end enhancements, resulting in a 15% increase in overall platform speed and responsiveness.
- Managed API versioning to ensure backward compatibility during feature updates and bug fixes, allowing multiple versions of the API to run concurrently without breaking existing client integrations.
- Employed Java Concurrency utilities, such as ExecutorService and ConcurrentHashMap, to handle parallel processing and improve the performance of the system's transaction handling.
- Collaborated with cross-functional teams in Agile sprints, ensuring timely delivery of key project features, adapting quickly to changes, and improving the overall development lifecycle.

Software Developer | Cognizant, India **Feb 2019 – Jan 2022**

- Developed dynamic and responsive user interfaces with React.js for an e-commerce platform, enhancing the online shopping experience and improving user engagement through interactive components.
- Contributed to a 25% increase in online sales and a 20% reduction in order processing time by optimizing system performance and user experience.
- Made complex SQL queries to handle diverse data retrieval needs, such as generating sales reports, customer purchase histories, and inventory status, ensuring accurate and efficient data reporting.
- Created and integrated RESTful APIs to connect various internal and third-party services, ensuring seamless data synchronization and efficient service interactions across the platform.
- Employed Spring MVC to build the web layer of the application, handling HTTP requests and responses, and mapping them to appropriate business logic and views.
- Leveraged Java 8 features such as lambda expressions, streams, and Optional to write more concise and expressive code, enhancing readability and performance.
- Designed and implemented a microservices architecture to break down the e-commerce platform into independently deployable and scalable services, improving modularity and system resilience.
- Utilized JSON Web Tokens (JWT) for token-based authentication, providing a secure and stateless way to manage user sessions and authorize access to protected resources.
- Used JavaScript to create interactive and dynamic user interfaces, including features like real-time form validation, dynamic content updates, and asynchronous data fetching using AJAX.
- Established and managed Jenkins CI/CD pipelines to automate build, test, and deployment processes, leading to a 50% reduction in deployment time and errors.
- Implemented features and improvements that significantly boosted customer satisfaction and operational efficiency, demonstrating the platform's effectiveness in meeting client needs.
- Employed the OpenAPI Specification (formerly Swagger Specification) to define API endpoints, request/response models, and authentication methods in a standardized format, ensuring consistency and clarity in API design.
- Utilized Mockito to mock dependencies of service classes, such as repository and external API calls, enabling isolated testing of business logic without relying on actual implementations or external systems.

EDUCATION

Master of Science in Computer Science - New Jersey Institute of Technology (NJIT), Newark, NJ, USA
Bachelor of Technology in Computer Science and Engineering - GITAM University, Hyderabad, India
