Summary

Recently completed my Master of Science in Business Analytics from St. Bonaventure University. Skilled in data analysis, data visualization, predictive and prescriptive analytics, and systems analysis. Proficient in leveraging data-driven strategies to generate valuable business insights and support decision-making. Eager to apply analytical expertise and knowledge in an entry-level Data Analyst or Business Analyst position.

Skills

- **Programming Languages**: Python, R, SQL, Bash, PowerShell
- **Data Analysis & Analytics Tools**: Excel, Tableau, Power BI, SAS
- **Statistical Analysis**: Regression, classification, time series forecasting
- **Database Management**: Data Warehousing, ETL processes, MySQL, SQL Server
- **Business Intelligence**: Data visualization, reporting, dashboards
- **Operating Systems**: Linux, Windows
- **Project Management**: Agile methodologies, project planning, scheduling
- **Soft Skills**: Critical thinking, problem-solving, communication, teamwork, attention to detail

Projects

1. Sales Forecasting Model
    - Tools: Python (Pandas, Scikit-learn), Excel, Tableau
    - Description: Use historical sales data to forecast future sales trends. I did apply time series analysis, regression models to predict sales for the next months or quarters.
    - Key Skills: Data cleaning, time series forecasting, predictive modeling, evaluation metrics (e.g., MAE, RMSE).

2. Customer Segmentation Analysis
    - Tools: Python (Pandas, Scikit-learn), KMeans Clustering, Tableau, Power BI
    - Description: Use customer demographic and transactional data to segment customers into different groups (e.g., high-value customers, frequent buyers). Apply clustering techniques like KMeans. Visualize the segmentation results to uncover patterns and behaviors that could drive marketing strategies.
    - Key Skills: Data exploration, clustering algorithms, visualization, segmentation strategies.

3. Predictive Analytics for Sales Forecasting
    - Tools Used: Python (Pandas, Scikit-learn), Excel
    - Developed a sales forecasting model using historical sales data. Applied machine learning algorithms such as linear regression and decision trees to predict future sales and improve business strategy.

5. Business Ethics Case Study Analysis

- Tools Used: Excel, PowerPoint
- Conducted a detailed analysis of ethical challenges in data analysis, focusing on privacy concerns, data bias, and compliance with data protection laws.

6. Customer Data Update
- Tools: Excel, SQL
- Worked on a college project to update and clean a sample customer database. Used SQL queries and Excel to identify and fix missing or incorrect data, improving data accuracy and consistency.

Education

Master of Science in Business Analytics
St. Bonaventure University — Graduation Date: [Dec 2024]

- Relevant Coursework:
  - System Analysis & Instrumentation: Focus on Linux & Windows systems, Bash and PowerShell scripting, authentication and authorization processes, system security.
  - Predictive Analytics: Applied statistical models and machine learning algorithms to predict future trends and outcomes based on historical data.
  - Prescriptive Analytics: Employed optimization techniques to recommend actions based on data insights.
  - Business Ethics: Examined the ethical considerations in data analysis and business decision-making.
  - Analytical Programming: Developed programming skills using languages such as Python and R for data analysis and manipulation.
  - Data Warehousing: Learned database architecture, ETL processes, and how to manage large datasets for analysis.
  - Data Visualization: Gained proficiency in using data visualization tools like Tableau and Power BI to communicate data insights effectively.

Certifications and Trainings

The Ultimate MYSQL Bootcamp (Udemy) [Oct 2024]
AWS Certified Cloud Practitioner (Udemy) [Oct 2024]
Google Data Analytics Certificate [In progress]
SQL - MySQL for Data Analytics and Business Intelligence (Udemy) – [In progress]
