## EDUCATION

**The Catholic University of America** **Washington D.C, USA**
**Master of Science, Data Analytics** Dec 2025
Coursework – Database Management Systems (DBMS), Analytics in Python, Statistics, Time Series Analysis, Financial Analytics

**Jawaharlal Nehru Technological University** **Hyderabad, Telangana, India**
Bachelor of Technology, Computer Science May 2020

## TECHNICAL SKILLS

**Data Analysis & Querying:** SQL (advanced), Python (Pandas, NumPy), R, SAS

**Data Visualization:** Tableau, Power BI, Looker Studio, Microsoft Excel (advanced formulas, Pivot Tables, executive summaries)

**Data Platforms & Pipelines:** Snowflake, BigQuery, Redshift, Azure, AWS, DBT, SSMS, Dagster, Docker

**Analytics & Statistical Methods:** Trend analysis, KPI definition, regression, hypothesis testing, A/B testing, time series forecasting

**Tools & Collaboration:** Git/GitHub, VS Code

## WORK EXPERIENCE

**Connyct** **College Park, Maryland, USA**
**Data Analyst Intern** Jun 2025 – Dec 2025

- Built 13+ Power BI dashboards hooked up to Snowflake showing quality metrics, operational KPIs, and basic financial trends; reduced manual reporting time by 30%.
- Created end-to-end pipelines in Snowflake SQL for the heavy lifting and used Power Query to pull everything together; brought in data from 10+ different sources and improved consistency + completeness by 20%.
- Handled 15–20 ad-hoc requests each month (mostly customer feedback, failure root causes, operational weirdness) and usually got answers back to people in 1–2 business days.
- Identified recurring false positives in alerts, dug into the patterns, and tweaked the logic to knock them down by 25%
- Developed repeatable SQL and Python workflows to automate recurring insights, charts, and reporting templates; partnered cross-functionally to validate data accuracy and definitions for consistent externally facing analytics.
- Led bi-weekly stakeholder meetings with Quality, Engineering, and Operations teams to prioritize needs, drive dashboard adoption, and translate complex data into actionable recommendations.

**HCL Tech** **Hyderabad, Telangana, India**
**Senior Data Analyst** Mar 2021- Mar 2024

- Designed advanced Power BI dashboards (DAX, RLS, drill-through) and standardized Tableau reports across 5+ business units for 50+ users, cutting ad-hoc query volume by 35% and improving cross-functional visibility.
- Developed customer/operational analytics models (segmentation, predictive elements) using SQL and Python (pandas); reduced churn by 11% and enhanced targeting accuracy while supporting marketing, finance, and operations performance reporting.
- Automated and optimized SQL models with DBT and constructed star-schema semantic models to enable self-service BI, decreasing IT dependency by 40% and reducing query runtime by up to 70% through high-latency query audits and documentation.
- Eliminated $150K in licensing overhead by transitioning legacy data testing workflows to an automated Python + SQL framework, delivering 80% improvement in manual processing speed and recurring reporting efficiency gains of 15%.
- Delivered trend analyses, KPI summaries, and executive dashboards in Power BI, Tableau, and Looker Studio for leadership, marketing, and operations teams.
- Collaborated with Marketing, Finance, Quality, Engineering, and Ops to align on key metrics (budget variance, compliance, failures); turned analysis into slides and summaries used to fix processes.
- Mentored junior analysts on SQL optimization, data controls, analytical best practices, and maintained centralized repositories for queries, datasets, and documentation to support data governance and repeatable insights.

## PROJECTS

**Walmart Forecast** Aug 2025 – Dec 2025

- Built an end-to-end 28-day forecasting pipeline using SQL and Python, covering data ingestion, feature engineering (81 features), model training, and validation.
- Achieved 4.5% MAPE through rigorous model evaluation, KPI monitoring, and iterative performance improvement.
- Evaluated before-and-after labor planning scenarios, identifying $175M–$400M in potential annual savings from improved staffing and overtime optimization.
