EDUCATION

Master of Information Systems, Illinois State University, Normal — May 2024
Relevant Coursework: SQL, R, Problem Solving with Python, Machine Learning, System Analysis and Design, Data Visualization

Bachelor of Technology, Computer Science, SR Engineering College, Hanamkonda — May 2020
Relevant Coursework: Big Data and Analytics, Artificial Intelligence, Network Security, Project Management, Web Technologies

SKILLS

PROGRAMMING LANGUAGES | Python (NumPy, Pandas, Matplotlib, Seaborn, SciPy), R, C, PHP, JavaScript, HTML, CSS
DATA MANIPULATION & ANALYSIS | Excel (Power Query, Pivot Tables, VLOOKUP), Python (Pandas, NumPy), R, SQL
DATA VISUALIZATION | Power BI, Tableau, Matplotlib, Seaborn
DATABASES | MySQL, PostgreSQL, MongoDB, SQL Server Management Studio (SSMS), Snowflake, Google BigQuery
CLOUD & BIG DATA | Microsoft Azure, Azure Databricks, AWS (S3, Lambda, Athena, Glue), GCP (BigQuery basics)
ETL & DATA PIPELINES | Alteryx, Apache Airflow, Talend
TOOLS & PLATFORMS | Jupyter Notebook, VS Code, Git/GitHub, Excel, Microsoft Power Automate, Google Data Studio
STATISTICS & MACHINE LEARNING | Hypothesis Testing, Regression, Classification, Clustering, Time Series (basic)

EXPERIENCE

Data Analyst — June 2020 - Nov 2022
DXC Technology — Hyderabad, India

- Collaborated with stakeholders to gather requirements and define KPIs, aligning BI solutions with business goals and identifying critical financial insights and risk areas.
- Connected and integrated data from multiple sources including TIBCO DV, SQL databases, Excel, SharePoint, SEMrush, and BrightEdge using ETL tools like Informatica to ensure a unified and accurate data pipeline.
- Conducted exploratory data analysis (EDA) using python and Excel to uncover patterns, detect outliers, and generate descriptive statistics.
- Cleaned and transformed data using Power BI Query Editor by removing irrelevant columns and applying filters, improving report performance by 20% and usability by 15%.
- Built dynamic dashboards and complex reports in Power BI using DAX, time intelligence functions, and custom measures to deliver strategic insights based on historical and real-time data trends.
- Implemented row-level security (RLS), page-level and visual-level filters, configured Power BI paginated reports, and managed report refresh schedules to ensure secure and timely access to data.
- Automated data workflows and approval processes using Power Automate, significantly reducing manual interventions and improving process efficiency.
- Applied Python (Pandas) and advanced SQL (joins, subqueries, performance tuning) for deeper data validation, cleansing, and transformation to support custom reporting needs.
- Provisioned cloud infrastructure on Azure (VNets, SQL Databases, Blob Storage, Azure Data Factory) and AWS (EC2, S3, Redshift, RDS) to support scalable and secure analytics environments.
- Gained Proficiency in a visualization tool and conducted training sessions to my peers to enhance team capabilities; mentored junior analysts.
- Assisted in creating UAT documentation and supported end-users during testing phases, helping ensure solution quality and smooth implementation within Agile sprint cycles.

PROJECTS

Retail Sales Performance and Demand Forecasting

- Extracted and transformed 500K+ sales transactions using SQL and Power BI Query Editor; applied filtering techniques and structured raw data for reporting, improving dashboard performance by 15%.
- Designed custom data models by integrating multiple data sources and applying statistical analysis to identify sales drivers, contributing to a 10% reduction in stockouts and enhanced inventory planning.
- Developed interactive Power BI dashboards with DAX measures and time-series forecasting, providing data-driven insights that improved sales strategy effectiveness by 20%.

Automated Data Pipeline for Orders Validation and Processing

- Designed and implemented an automated data pipeline in Azure Data Factory triggered by file arrivals in ADLS Gen2, reducing manual effort by 50% and enabling processing of 10,000+ files.
- Orchestrated end-to-end data flow across Azure services (Data Factory, Databricks, Key Vault, SQL Database), improving pipeline performance and ensuring secure data transfer.
- Optimized Spark jobs in Databricks and enabled cross-cloud data integration with AWS, improving pipeline execution efficiency by 25% and increasing reliability by 30%.

CERTIFICATIONS

- Microsoft Certified: Data Analyst Associate (Certification Number: H801-9290)
- Microsoft Certified: Data Engineer Associate (Certification Number: 7CFXF2-63160A)
