Ruthiwik Nomula

Dallas, TX | (469) 947 -4301 | rutwikreddy97@gmail.com | linkedin.com/in/ruthiwik-reddy-021374286

EDUCATION

Southern Methodist University, Dallas
Master of Science in Data Engineering August 2024 - May 2026

SKILLS

Languages: Python, SQL
Data Engineering: ETL/ELT Pipelines, Data Modeling, Data Validation, Data Quality Checks
Cloud & Platforms: Google Cloud Platform (GCP), BigQuery
Technologies: Spark (PySpark – exposure), Structured & Semi-Structured Data Processing (CSV, JSON), Data Warehousing
Tools: Git

WORK EXPERIENCE

Tenet Health
Data Engineer June 2025 – Present

- Transitioned from Data Engineering Intern to full-time role based on strong performance.
- Built and optimized ETL pipelines on Google Cloud Platform (GCP) using BigQuery for healthcare data migration.
- Worked with sensitive healthcare datasets, ensuring accuracy, security, and compliance.
- Processed structured and semi-structured healthcare datasets (CSV, JSON) and implemented data validation and quality checks to ensure pipeline reliability.
- Automated scheduled data workflows and optimized SQL transformations for performance and scalability.

Prodigy Info-Tech
Data Science Intern. February 2024 – March 2024

- Developed machine learning algorithms to solve real-world problems, improving model efficiency by 20%.
- Wrote Python scripts to automate data preprocessing tasks, saving over 10 hours per week.
- Presented findings and actionable insights to senior management, enhancing decision-making processes.

PROJECTS

Crop Yield & Fertilizer Prediction Using Machine Learning
Technologies Used: Python, Machine Learning, Scikit-learn, Data Analysis

- Developed a machine learning model to predict optimal fertilizer recommendations and improve crop yield.
- Analyzed data including soil properties, temperature, moisture, and crop type to predict the ideal fertilizer for specific crops.
- Applied machine learning techniques to detect complex patterns in the data for personalized and sustainable agriculture practices.
- Performed data cleaning and transformation on structured datasets to prepare for model training.

Water Portability Prediction Using Machine Learning
Technologies Used: Python, Scikit-learn, Pandas, Matplotlib

- Developed a machine learning model to predict water portability, based on various environmental factors and water quality parameters.
- Processed and cleaned large datasets, ensuring accuracy by handling missing values and outliers.
- Achieved an 85% prediction accuracy, which can be used to provide early warnings for water quality issues.
