REDDY RUKMINI REDDY

US Citizen | Boston, MA | reddy.ru@northeastern.edu | 857-313-4902 | LinkedIn

EDUCATION

Master of Science in Data Analytics Engineering **May 2025**
Northeastern University, Boston, MA
Relevant Coursework: Data Management for Analytics, Foundations of Data Analytics, Machine Learning Operations, Statistical Methods in Engineering
Bachelor of Technology in Information Technology **June 2023**
G. Narayanamma Institute of Technology and Science (GNITS), Hyderabad, India
Relevant Coursework: Algorithms, Database Management Systems, Artificial Intelligence, Algorithm Design and Analysis

TECHNICAL SKILLS

Programming Languages: Python (pandas, seaborn, matplotlib), C, Java
Web Development: HTML/CSS, Django, JavaScript
Databases: MongoDB, SQL
Machine Learning: Scikit-Learn, Natural Language Processing, Regression, Clustering
Tools & Technologies: Azure, Airflow, VS Code, Power BI**,** Tableau

LEADERSHIP EXPERIENCE

GNITS Rotaract social media Team - Managed social media accounts, designed promotional materials, and executed marketing strategies to enhance event visibility and engagement
Space Apps Hackathon Organizing Committee - Organized a regional hackathon, managed logistics, sponsor relations, and volunteer coordination for 100 participants

ACADEMIC EXPERIENCE

RAG Chatbot for Research Computing **September 2024 - December 2024**
Technologies used: Airflow, Azure, Docker, MLflow, DVC
- Designed and developed a RAG chatbot for access to the Research Computing Department's resources, enabling researchers with an interactive, self-service tool.
- Utilized Airflow for workflow automation, Azure for infrastructure, Docker for containerization, MLflow for model tracking, and DVC for data versioning.

Crime Data Analysis **January 2024 - March 2024**
Technologies used: Seaborn, Pandas
- Analyzed real-world crime data (2020-present) with a focus on cleaning, preparation, and exploratory analysis.
- Utilized visualization and correlation analysis to identify crime trends, seasonal patterns, and regional variations, achieving 84% system accuracy

EEG Classification **October 2023 - December 2023**
Technologies used: Neural Networks
- Built deep learning models, including CNNs, to classify EEG data and predict epileptic seizures
- Processed a 42.6 GB dataset from 22 subjects, achieving 100% accuracy, precision, and recall

Customer Segmentation **September 2023 - December 2023**
Technologies used: Python, RFM Analysis, K-means Clustering
- Conducted segmentation for E-commerce using RFM analysis and K-means clustering.
- Delivered marketing recommendations that improved customer retention by 91% and maximized revenue.

Exploratory Data Analysis on Uber Data **November 2022 - April 2023**
Technologies used: Python, Pandas, SQL
- Analyzed 16 months of Uber data to understand ride patterns, user behavior, and geographical distribution.
- Used K-means clustering with the elbow method for precise analytical insights.

Script Abstract from Video **June 2022 - September 2022**
Technologies used: Django, Google Cloud speech to text API, CSS, NLP
- Engineered an application designed to transform video input into concise and summarized text with an accuracy of 81%
- Successfully published research paper for the project in Journal of Advancement in Software Engineering and Testing
