Summary

Data Analyst with a Master's in Data Analytics Engineering. Skilled in SQL, Python, Tableau, and Power BI, with hands-on experience designing ETL workflows (dbt, Talend) and deploying analytics solutions on AWS (Glue, Athena, S3, Lambda, Redshift). Proven track record of automating reporting pipelines, building KPI dashboards, and translating data into business decisions that improve forecast accuracy and reduce operational costs.

Education

Northeastern University — Boston, MA, USA
Master of Science in Data Analytics Engineering, Sep. 2023 – Dec. 2025

Vellore Institute of Technology — India
Bachelor of Technology in Computer Science and Engineering, Jul. 2019 – Aug. 2023

Experience

Data Analyst — Mar. 2026 – Present
Adaptive Concepts, USA
- Developed AI forecasting models in **Python** and AWS across **100K+** records to identify KPI patterns and performance insights.
- Benchmarked **Random Forest**, **Gradient Boosting**, **ARIMA**, and **Exponential Smoothing** models, identifying **30%** variance in forecasting accuracy via **RMSE**, **MAE**, and **MAPE**.
- Engineered data pipelines for cleaning, feature engineering, and model evaluation to deliver scalable analytics workflows on AWS.

Financial Data Analyst Co-op — Aug. 2024 – Dec. 2024
Mimecast, USA
- Designed and deployed **Tableau** dashboards tracking **20+** financial KPIs across 4 product lines, improving forecast accuracy by **15%** and directly informing strategic decisions for a $500M+ ARR business.
- Reduced reporting cycle time by **40%** by optimizing **Snowflake** data marts with **dbt** and performance-tuned SQL models.
- Automated executive KPI reporting via **dbt** macros and SQL, eliminating manual preparation and delivering daily GTM insights through full automation.
- Standardized QA workflows via Power Query and **dbt** tests, saving 20+ audit hours/month and boosting KPI accuracy by **25%**.
- Built a **Tableau** conversion funnel for 5,000+ trial users, surfacing 3 key drop-off points that tightened ARR forecasting.

Data Analyst — Oct. 2023 – Aug. 2024
Northeastern University, USA
- Automated ETL pipelines across **Snowflake** and **AWS** (S3, Glue, Lambda, Athena, Redshift), eliminating **90%** of manual ingestion across **50+** tables.
- Optimized **AWS Glue** job performance by **30%** with a 5-member engineering team and validated **100K+** multi-source records in **PostgreSQL** to **99.5%** accuracy for cross-functional stakeholders.
- Executed **A/B** tests on KPI logic using **t-tests** and **chi-square** at **95%** confidence, preventing regressions before deployment.

Data Analyst Intern — Jan. 2023 – Jun. 2023
Corizo, India
- Led a 3-person team building **ARIMA** and **Prophet** forecasting models at **92%** accuracy, improving inventory planning and reducing excess stock costs by **15%**.
- Automated variance reporting using **VBA**, **Power Query**, and **SQL**, cutting manual reporting effort by **80%** and enabling analysts to redirect ∼10 hours/week to higher-value analysis.
- Built **Tableau** dashboards visualizing forecast vs. actuals and fulfillment KPIs, eliminating **10%** of excess inventory.

Projects

Flight Prices and Public Holidays Dashboard | *Power BI, DAX, Excel* (Link) — Sep. 2025 – Oct. 2025
- Merged and cleaned flight pricing, holiday, and traveler datasets using **Power Query** to standardize data across sources, enabling seamless integration into the Power BI dashboard.
- Built a U.S. map, airline comparisons, and a **calendar heatmap** with **DAX measures** tracking daily ticket price fluctuations.
- Identified that fares peak on holidays and drop immediately after, with certain states consistently showing higher average fares.

Patient Readmission Risk Analytics | *Python, scikit-learn, SQL* (Link) — Oct. 2023 – Dec. 2023
- Analyzed **70K+** patient records from **130 US hospitals** across a 10-year dataset to identify drivers of diabetes readmission.
- Applied **Random Forest**, **Gradient Boosting**, and **Logistic Regression**, achieving an F1 score of **0.72** vs. a 0.65 baseline.
- Identified **3** high-risk patient cohorts using **Matplotlib** and **Seaborn**, delivering targeted intervention recommendations.

Technical Skills

Analytics & Modeling: SQL, Python (Pandas, NumPy, scikit-learn, Statsmodels), R, Statistical Modeling, A/B Testing, Forecasting
Data Engineering: AWS (S3, Glue, Lambda, Athena, Redshift), Snowflake, dbt, PostgreSQL, ETL Design
BI & Visualization: Tableau, Power BI, QuickSight, Matplotlib, Seaborn, Excel (Power Query, PivotTables)
Tools & Workflow: Git, Jira, Agile/Scrum, Google Analytics, Alteryx, Documentation & QA

Certifications

Tableau Desktop Specialist
Google Foundations — Data Analytics
