

Douglas O. Walker

Douglas.Walker88@gmail.com

EDUCATION: **Georgia Institute of Technology** (Atlanta, GA)
Bachelor of Science in Computer Engineering (May 2012)

Strategic data leader with 10+ years of experience leading data programs, operationalizing metadata and lineage frameworks, and driving analytics transformation across finance and commercial real estate domains. Proven success in launching scalable data platforms on Google Cloud, automating ETL pipelines with Python and SQL, and embedding governance protocols using Collibra. Adept at bridging technical rigor with business impact—leading cross-functional teams, optimizing data quality, and enabling federated reporting for executive decision-making. Passionate about building resilient data ecosystems that support regulatory compliance, operational efficiency, and innovation at scale.

Data Engineering & Integration

Python · SQL · Alteryx · SnapLogic · Zapier · Google Cloud Platform (BigQuery, Cloud Storage) · Oracle · Microsoft Access

Data Governance & Quality

Collibra Data Intelligence Platform · Collibra Data Quality · Metadata Documentation · Lineage Mapping · DQ Rule Design ·

Analytics & Visualization

Tableau · Power BI · Looker · Excel · KPI Dashboarding · Statistical Testing · Campaign Performance Analysis

Project & Product Management

JIRA · ServiceNow · HP Quality Center · Microsoft Project · Visio · SharePoint · Smartsheet · Agile/Scrum Methodologies

Programming & Scripting Languages

Python · JavaScript · JSON · PHP · VBA · Powershell · C · C++ · PERL · MATLAB

WORK EXPERIENCE:

CBRE, Data Management Lead - Charlotte, NC

May 2022 – Present

Led account-wide data initiatives for a major banking institution, supporting commercial real estate domains—Project Management, Work Orders, Occupancy Planning, Vendor Management, RFPs, and Employee data. Delivered scalable automation, governance, and analytics infrastructure across compliance-driven environments.

- Architected and launched a data governance program from the ground up, identifying domain-specific data owners and stewards to define metadata schemas, lineage protocols, and data quality thresholds, enabling scalable governance across commercial real estate datasets.
- Deployed Collibra Data Intelligence Platform and Collibra Data Quality to operationalize metadata management, lineage tracking, and automated scoring across sensitive banking datasets, ensuring integrity and audit readiness.
- Engineered automated workflows and documented lineage for account-level KPIs where no prior infrastructure existed, reducing manual effort by 60%, ensuring regulatory compliance, and enabling continuous monitoring of account health.
- Developed a Python-based scheduling framework to orchestrate ETL pipelines across disparate systems, ensuring daily ingestion and availability of operational datasets for strategic reporting.
- Integrated data pipelines into Google Cloud Platform (GCP), leveraging BigQuery and SQL to support federated reporting, accelerate query performance, and centralize access to curated datasets.
- Leveraged Power BI to create interactive real-time dashboards for pipeline monitoring, which helped to reduced downtime by 70% and significantly improved reporting reliability and availability.
- Supervised 2 data analysts and 2 developers to enhance data engineering, governance, and analytics, using JIRA for task and sprint tracking and leading daily stand-ups and retrospectives under Scrum/Agile methods.

New Legacy Property Group, Senior Business Data Analyst – Charlotte, NC

March 2017 – May 2022

Business Process Streamlining, Automation and Tracking

- Designed and maintained end-to-end data pipelines using Python and SQL to automate the ingestion, transformation, and delivery of municipal and real estate datasets across multiple markets.
- Developed custom API integrations to unify data sources from CRM, email, calendar, and document platforms, enabling centralized access and reducing data silos.
- Implemented data quality (DQ) checks and validation rules to ensure accuracy, completeness, and consistency across operational datasets; flagged anomalies and established remediation workflows.
- Authored metadata documentation for key datasets, including field definitions, lineage diagrams, and usage protocols to support data stewardship and cross-team transparency.

Douglas O. Walker

Douglas.Walker88@gmail.com

- Led the standardization of renovation material schedules by normalizing vendor data and creating structured reporting templates, improving forecasting and procurement efficiency.
- Collaborated with operations and marketing teams to define KPIs and build dashboards that tracked campaign performance, team productivity, and market penetration.
- Evaluated and deployed marketing and communication platforms (Launch Control, Podio, RingCentral) based on data integration capabilities, governance features, and reporting flexibility.
- Assessed e-signature platforms (HelloSign, DocuSign, Adobe Sign, PandaDoc) for compliance with contract envelope constraints, focusing on auditability, access control, and metadata retention.
- Established version control and audit trail protocols for internal documentation and client-facing deliverables, reinforcing governance and reducing risk exposure.

FIS Global, Senior Business Systems Analyst – Charlotte, NC

April 2016 – March 2017

Corporate Banking Solutions - Cash Drop Implementation

- Managed implementation of payment solutions at financial institutions for RTP, ACH, Wires and Account Transfers.
- Performed data mapping following ISO 20022 that allowed system to parse, validate and process incoming payment files.
- Created use case docs, wireframes and screen specs to paint the picture for clients of the potential implementation.
- Post design deliverables creation, lead elaboration sessions with client for feedback and updates for design approval.
- After approval, review the design docs with the Dev and QA teams in order for development and construction to kick off.
- Served as liaison during dev for clarification and updates of design docs by signing off on Test Scenarios and Dev Demos.
- JIRA defect management for previous projects that have releases that have already been delivered to the client.
- Created "BA Playbook" for the team because the process for this role and its responsibilities had not been codified.

Finance of America, Senior Business Analyst – Charlotte, NC

April 2015 – April 2016

Enterprise Data Warehouse Design and Implementation

- Created CRUD document to assist in determining the data flow across the different B2R loan origination systems.
- Created source to target mapping to analyze the data integrity and quality based on system reports prior to integration.
- Utilized data integration tool Alteryx for data extraction and batch mapping with B2R LOS web services.
- Created data model for the Amazon Redshift database based on the source to target mapping and data extractions.

Mortgage Call Report Business Analysis for NMLS Compliance

- Used NMLS Resource Center for due diligence to create detailed business requirements for compliance submissions.
- Interviewed Salesforce.com users to create mapping diagrams for NMLS compliance and B2R loan application stages.
- Created Microsoft Excel pivot tables for analysis of loan volume by state, status and if applicable reason for fallout.
- Gave presentation for final signoff from the VP of Compliance Counsel on the analysis prior to submitting results.

Foundation Loan Product Reporting Process Improvement

- Worked with the Capital Markets Group to determine the business requirements for the securitization data tape.
- Interviewed representation from Operations Group to develop business process flows and technical ecosystem maps.
- Created Excel data mapping document in order to track the source of each securitization data point and analyze gaps.
- Created solution design diagram for process automation to extract segments of the data tape from different systems.
- Interviewed respective system SME's and developers to create the functional requirement documents.

Bank of America Corporation, Business Systems Consultant – Charlotte, NC

June 2012 – April 2015

Wholesale Model Bank Payment Platform Transformation

Data Analysis and System Testing

- Created custom SQL scripts, Excel VBA and Pivot Tables to categorize system defects to perform root cause analysis.
- Created SQL script to extract HP Quality Center data into excel daily to derive re-test list based on resolved defects.
- Created RDBMS using Perl, Perl/TK and Oracle SQL to track environment details and streamline reporting for analysis.

Systems Analysis and Integration

- Lead requirements gathering sessions with the project and application teams while serving as end-to-end system SME.
- Lead inter-system integration coordination for CIT, SIT, UAT, Performance and Production environments.
- Lead solution design and triage activities with our global partner application, development, testing and support teams.
- Created and maintained diagrams of the overall system and architecture to explain current process flows and constraint
