

JAVA DEVELOPER

Name: Devraj Paudel
Email: devrajpaudel615@gmail.com
Phone: (682) 432-3297
Location: Fort Worth, Texas

Profile Summary

- Over 5 years of experience in software analysis, design, development, and implementation of Client/Server, Intranet, and Internet applications, based on Java/J2EE technologies.
- Expertise in Core Java with a strong understanding and working knowledge of Object-Oriented Concepts like Collections, Multi-Threading, Concurrency, Exception handling, Serialization, etc.
- Proficient in designing and developing Microservices with Spring Boot.
- Involved in Agile and Waterfall Software Development Methodologies, including Scrum and Test-Driven Development.
- Ability to learn, evaluate, and adapt to new technologies very quickly.
- Strong analytical, problem-solving, and organizational skills. Able to handle multiple tasks and assignments concurrently in cross-functional teams.
- Knowledge of Agile Software Development, XP methodologies, Pair Programming, and Test-Driven Development (TDD).
- Worked on the development of Hibernate, including mapping files, configuration files, and classes to interact with the database.
- Engaged with the AWS community through forums, events, and online resources.
- Stayed updated on new AWS services and best practices for Java development.
- Responsible for implementing business requirements using Spring Core, Spring MVC, Spring Data, and Spring Security.
- Collaborated with the product team to gather requirements, design system architecture, and plan project timelines.
- Wrote clean, efficient, and well-documented code following industry best practices and Experience in writing unit tests using JUnit and Mockito.
- Participated in code reviews and provided constructive feedback to team members.
- Experience in working on longer-term assignments in functional areas like Banking and Financial Domain, Online Content Publishing Workflow Management, and Legal Information Systems.
- Experience in design patterns such as singleton, factory, abstract factory design pattern.

ACADEMIC BACKGROUND

Masters

Technical Skills

- Languages: Java, SQL.
- Enterprise Technologies: Spring (Boot, MVC, AOP, Security), Hibernate, Struts.
- Web Services: REST
- Methodology: Agile, Waterfall
- Markup Languages: HTML, XML, XSLT, JSON.
- Messaging Framework: RabbitMQ, ActiveMQ, IBMMQ.
- Build Manager: Maven, Gradle. Ant
- Testing Framework: Junit, Mockito.
- Frameworks: Hibernate, Spring Boot, JPA.
- Database: Oracle 11g, Cassandra, Postgres.
- Continuous Integration: Jenkins.
- Rest Client: Postman, SOAPUI Client & Fiddler.
- Testing Tools: Selenium, JMETER, QTP
- Deployment Server: Tomcat, WebSphere & Jetty.
- Version Control: SVN, GIT.
- Operating Systems: Windows & Linux

Work Experience:

Position: **Java Developer (May 2023 - Present)**

Company: Sanitas Medical Center

Location: Irving, TX

Responsibilities:

- Designed and developed extensive additions to an existing Struts/Java/J2EE Web Application, utilizing Service-Oriented Architecture (SOA) techniques.
- Creating APIs for different HTTPS using Rest Controller and Spring Boot.
- Involved in the analysis, specification, design, implementation, and testing phases of the Software Development Life Cycle (SDLC), using agile methodologies (SCRUM) for application development.
- Expert in skills such as Spring, Spring MVC, Spring Boot, Hibernate, JSF, XML technologies, and Struts framework with Tiles development experience.
- Leveraged Spring Boot as the primary framework for developing microservices in Java
- Embraced Amazon Web Services (AWS) to leverage cloud computing capabilities.
- Developed queries required for application development and implemented using different logics.
- Designed RESTful APIs for seamless communication between microservices.
- Performed Unit Testing, Integration Testing, and generated test cases for web applications using JUnit, Jenkins, and Log4j.
- Production support and management of NoSQL databases.
- Deployed Java web applications using AWS Elastic Beanstalk
- Maintained comprehensive documentation for each microservice, including API specifications and deployment guides.
- Established robust CI/CD pipelines using tools like Jenkins, GitLab CI, or AWS CodePipeline
- Migrated databases from SQL Databases (Oracle and SQL Server) to NoSQL Databases (Cassandra/MongoDB).

Environment: Java, SpringBoot, Spring, Struts, Hibernate, Apache, REST, Eclipse, Weblogic, Microservices, ClearCase, JUnit, AGILE, UML, Maven, AWS, Jenkins, Gitlab.

Position: **Java Developer (May 2021 - Apr 2023)**

Company: Mountain Valley Bank

Location: Greeley, CO

Responsibilities:

- Gathered requirement specifications in sessions involving both Business and IT.
- Deployed and developed web services, integrating clients with services using SOAP and RESTful.
- Developed the entire application, implementing MVC Architecture and integrating Hibernate and Spring Boot frameworks.
- Involved in the development of the presentation layer using JSP and servlets.
- Worked on the development of Hibernate, including mapping files, configuration files, and classes to interact with the database.
- Encouraged code reuse, maintainability, and consistency across microservices.
- Developed J2EE applications on Windows and Unix Platforms.
- Designed and developed Hibernate configuration and session-per-request design pattern for making database connectivity and accessing the session for database transactions, respectively.
- Utilized various AWS services like EC2, S3, Lambda, API Gateway, CloudWatch, ECS, ECR, CloudFormation.
- Leveraged AWS SDK for Java to interact programmatically with AWS services
- Deployed Java applications on Elastic Compute Cloud (EC2) instances.
- Developed the Presentation layer using JSP, HTML, custom taglib, and used AJAX/jQuery-based rich clients for an improved customer experience.
- Ensured secure and scalable interactions among microservices.
- Containerized microservices using Docker for consistency across development, testing, and production environments.
- Implemented object-relational mapping in the persistence layer using the Hibernate framework in addition to Spring functionality.
- Embraced microservices architecture to build modular, scalable, and independently deployable services.
- Involved in injecting dependencies into code using the Spring Core module.
- Worked extensively with Hibernate Query Language (HQL) to store and retrieve data from the Oracle database.
- Decomposed monolithic applications into smaller, self-contained microservices.
- Assisted in the design and development of RESTful APIs using the Spring framework.

Environment: Spring Framework, Java 1.8, JIRA/Wiki tools, Log4j, Hibernate, Microservices, IntelliJ, Gradle and Maven build process, GitHub repository, Jenkin.

Position: Java Developer (Oct 2020 - Apr 2021)

Company: Chure Hill Hospital

Location: Hetauda, Nepal

Responsibilities:

- Designed, implemented, and tested the Spring Domain Model for services using Core Java.
- Produced and consumed messages to and from Kafka Topics for Microservices Communication.
- Set up the required environment in Local, Dev, Test, and Prod environments.
- Designed and developed different PL/SQL blocks and Stored Procedures in the DB2 database.
- Created and built Jenkins Pipelines for the CI/CD Process.
- Configured CloudWatch for monitoring Java applications and AWS resources.
- Used Test-Driven Deployment (TDD) with Agile.
- Involved in coding for the integration of Jasper Reports with Java.
- Responsible for maintaining Maven Build Scripts and tweaking them if changes occur in the requirements.
- Worked on NAGIOS script and JBOSS Drools, Python, Birt, CSS2 and 3, HTML5, Udeploy.
- Performed configuration, testing, and change control documentation for the cloud stack environment.
- Monitored and optimized AWS costs using tools like AWS Cost Explorer.
- Integrated AWS CodePipeline and CodeDeploy for CI/CD.
- Used JMS-MQ Bridge to send messages securely, reliably, and asynchronously to Web Sphere MQ, which connects to the legacy systems.
- Installed and developed workflows for integration and automation in cloud-based solutions.
- Developed microservices using REST architecture.
- Used Log4j to capture logs that include runtime exceptions and for logging info helpful in debugging issues.
- Worked with the GIT repository to manage the project, participated in Continuous Integration deployment, automated

builds, and tests using Jenkins and Maven.

- Created connection pools in WebSphere.
- Participated in the entire development and implementation process, including specification, documentation, quality assurance, and release testing, being aware of business issues as they impact overall delivery.
- Tested the Restful Services using POSTMan by using JSON format.
- Conducted branching, tagging, and release activities on Version Control Tools like GIT.
- Configured and set up Tomcat, Apache, Apache Kafka, Apache Cassandra, HA proxy, Redis, etc.
- Developed and maintained web applications using Java, Spring Boot, and Rest webservice framework.

Environment: Java, Spring, Hibernate, JDBC, Oracle 11g, XML, Tomcat server, Microservices, Log4J, JSON, JUnit, LINUX, Apache Tomcat, Visual SVN, Eclipse

Position: Jr. **Java Developer (Feb 2019 - Sep 2020)**

Company: Sanima Bank Limited

Location: Kathmandu, Nepal

Responsibilities:

- Employed EJB Session beans to expose the application for use by third-party users. Utilized MDB to read messages from JMS queues for asynchronous communication. Leveraged the Java Mail API for automated email generation functionality. Worked on the consumption side of SOAP-based Web Services using AXIS 2.x, SOAP UI, and JAXB.
- Developed several stored procedures, triggers, and sequences on Oracle 11g. Created CRON Jobs and utilized Autosys to schedule daily scripts.
- Developed a microservice for extracting AML data from Enterprise Data Warehousing and pushing it to external systems in JSON format.
- Contributed to building platform components, such as pub-sub messaging systems, large-scale web services, microservices, log processing pipelines, distributed databases, middleware, object stores, and stream processing frameworks like Apache Storm or Apache Apex. Configured production servers using the Ansible Configuration Management tool to automate the implementation and production processes.
- Established the Microservices infrastructure for the product catalog, mapping localization, etc.

- Developed services according to the Service-Oriented Architecture (SOA) using the Domain Model, particularly as a supply chain company.
- Leveraged AWS S3 for scalable and secure object storage.
- Stored and retrieved application data, backups, and static resources.
- Contributed to internal tools that assist with development and service maintenance, with a primary focus on Spring components such as Servlet Controller.
- Provided access to individual users for IBM MQ objects like Queue Manager and queues.
- Participated in designing and developing JSON and XML objects with SQL Server. Utilized GIT for source control and version management of all code and resources.

Environment: Java 1.6/1.7, JSP, HTML, DHTML, Ajax, Spring MVC, Hibernate, Microservices, AWS S3, PostgreSQL, GIT, Ansible, Apache Mave
