

Tejaswini Cherukuru Rajashekar

Binghamton, New York | (607) 296-8556 | crtejaswini3@gmail.com

SUMMARY

Dedicated Mulesoft developer with over 2 years of experience and a Bachelor's degree in Computer Science, currently pursuing a Master's in Computer Science, developed RESTful API Modeling Language (RAML) for efficient API lifecycle management. Facilitated batch integrations with connectors such as HTTP, Database, Salesforce, and Snowflake, enabling effective large-scale data migrations. Engineered Mule applications featuring advanced flows, error handling, and data validation, deployed through CI/CD pipelines using GitHub, Jenkins, and Azure DevOps. Managed reliable data exchanges using Amazon SQS and enhanced security with tokenization, encryption, and certificates, earning the Ace Award for exceptional project contributions twice.

EDUCATION

Binghamton University, State University of New York, Thomas J. Watson College of Engineering and Applied Science

Master of Science in Computer Science

Expected May 2025

Relevant Coursework: Data Structures and Algorithms, Object-Oriented Programming, Operating Systems, Software Project Management, Programming Languages, Computer Security

Cambridge Institute of Technology, Bengaluru, India

Bachelor of Engineering in Computer Science

June 2022

Cumulative GPA: 3.56/4.00

Relevant Coursework: Database Management Systems, Computer Organization, Software Engineering

TECHNICAL SKILLS

Languages: C, Java

Integration Tools: Mulesoft

Web Technologies: HTML5, CSS3

Database: MySQL

Deployment tools: Jenkins, Azure DevOps

IDEs: Anypoint Studio, Android Studio, Eclipse

Other: Salesforce, Snowflake

Certifications:

- Completed the certification on Developer - Level 1, Mulesoft *Dec 2021*
- Pursued 'Python for Data Science' from NPTEL (National Programme on Technology Enhanced Learning) *Aug 2020*

PROFESSIONAL EXPERIENCE

Software Engineer, Apisero Global Integrations Solutions Private Limited, Bengaluru, India *Sep 2021-July 2023*

- Created and developed RESTful API Modeling Language (RAML) that made it simple to manage the API lifecycle from design to deployment to sharing.
- Created batch integrations to move large amounts of data between the source and the final system.
- Used a variety of connectors for the data migration, including HTTP, Database, Salesforce, Workday, Snowflake, files, and SFTP.
- Created Mule Flows, Scopes, Error Handling techniques, and Message Filters Validation Transformation.
- Used SQL and database technologies and built effective SQL to read and write data.
- Utilized the Anypoint Runtime Manager to deploy, manage, and monitor the Mule applications in a sandbox, staging, or production environment.
- Utilized Continuous Integration and Continuous Deployment (CI/CD) to automate Mule deployments with GitHub, Jenkins, and Azure DevOps Pipelines.
- Used Amazon Simple Queue Service (SQS) to accomplish various functions and move data between dispersed application components without losing messages or requiring each component to be constantly available.
- Developed custom objects and lightning apps in Salesforce to store and manage data while it was being migrated to the end platform.
- Used security methods, including access tokens for authentication and authorization, decryption, encryption, and security certificates.
- Received the Ace Award twice for contribution to the projects.

INTERNSHIP

Web Developer, Suven Consultants and Technology Private Limited, Bengaluru, India

Jun 2021-Jul 2021

Created website replicas:

- 365 Entertainment (similar to Hotstar.com)
- Blogging (similar to Medium.com and CSS3Animations)
- Voter Registration (a replica of Form 6 from the National Voter Service Portal)

RESEARCH EXPERIENCE

Detection of Diabetes using Machine Learning | Cambridge Institute of Technology, Bengaluru, India

Sep 2021–Jul 2022

Team size: 3

Brief description: The project aims to combine the findings of several machine learning approaches to perform a patient's early diabetes prediction with a higher degree of accuracy. The algorithms K nearest neighbor, Logistic Regression, Random Forest, Support Vector Machine, and Decision tree are employed. When a patient receives a diabetes diagnosis, this model also offers food plans to manage the disease.

Individual Role:

- Fetched the relevant diabetic dataset, which has eight attributes, and then performed data pre-processing, a machine learning technique that entails transforming unrefined data into appropriate configuration. Cleaning data, integrating data, and transforming data.
- Performed scaling to split the data as an 80% training set and 20% as a test set.
- Analyzed the various algorithms based on various metrics and determined the best-performing algorithm as the support vector machine.
- Created and tested the model for the support vector machine learning algorithm based on the training set.
- Designed the front-end interface, using Html, CSS, and Django for displaying the prediction results as well as to display the diet plans.
- Technology used: Front end: HTML, CSS, Python, Django.

Mobile Application 'Recipe Manual' using Android Studio | Cambridge Institute of Technology, Bengaluru, India

Aug 2021

Brief description: This application saves time by providing recipes in a few simple steps. Quick Recipes app streamlines the process of finding recipes by fetching ingredient and title searches. With new recipes being uploaded daily, users will always have new foods. The project has been implemented using Core Java, Android, and SQLite.

Smart City using OpenGL | Cambridge Institute of Technology, Bengaluru, India

Mar–Jul 2021

Brief description: The smart city project was created using OpenGL software and focuses on providing quality life to the residents with the minimal possible resources. It mostly emphasizes the value of solar energy.

Airline Reservation | Cambridge Institute of Technology, Bengaluru, India

Sep 2020–Jan 2021

Team size: 4

Brief description: This project provides details like flight availability, passenger details, a list of passengers, and payment details. It enables the storing and retrieval of passenger-related data and the completion of transactions pertaining to their travel and more. When a traveler uses Core Java, Swings, or MySQL to reserve a ticket, the system also permits the addition of records.

Individual Role:

- Created and validated the schema that represents the logical view of the entire project.
- Implemented backend using MySQL to organize the data in a structured form of tables, which facilitates the faster retrieval and modification of the data.
- Created triggers, a stored procedure that gets invoked automatically in response to an event, displaying the details of the passengers who have booked the ticket on a given day.

PRESENTATIONS AND POSTERS

● Organized the departmental festival 'Chiguru 2022' at Cambridge Institute of Technology, India

Aug 2022

● Co-organized the national conference on 'Recent Trends in Engineering and Technology' at Cambridge Institute of Technology, India

Jun 2022

● Acted as the placement coordinator for the college's Computer Science Department, India

2021–2022

● Won prizes in singing competitions at college level, Cambridge Institute of Technology, Bengaluru, India

2021

COMMUNITY SERVICE

● Volunteered at Cognition India NGO, whose purpose is to empower youth to address global issues pertaining to sustainable development, India

2021–2022

● Helped government school students score better, preparing charts, posters, and worksheets, India

2021–2022

● Conducted garbage disposal awareness campaigns to encourage people to use cloth bags instead of plastic ones, plant more trees, and dispose of waste properly, India

May 2022
