

Absar Sarfaraz

B.S Computer Information Technology

absarsarfaraz@gmail.com | (507)-497-6232 | 1125 Lagoon Ave Apt 505, Minneapolis, MN, 55408

Education

GPA 3.71

Minnesota State University, Mankato

Jan 2023 - May 2025

B.S Computer Information Technology, Minor: Mathematics

University Of Minnesota, Twin Cities

Aug 2021 - Dec 2022

B.S Computer Science, Minor: Mathematics (Transferred to MSU due to financial constraints)

Skills: Java/Python/Javascript/HTML, PL/SQL, PowerBI, React.js, AzureDevOps, Postman, MS Visio, Agile/Scrum, Requirements Analysis, Data Modelling/Visualization, Pentesting/Vulnerability Assessment

Relevant Work Experience

Mower County - Information Technology Intern

Feb 2025 - Present

- Recently onboarded.

Ledelsea - Systems Analyst Intern

June 2024 - Dec 2024

- Enhanced a work-order tracking application to monitor and report work-order statuses, implementing SQL queries, API testing and data modeling to streamline tracking and decision-making.
- Partnered with stakeholders to identify and document business requirements, performing in-depth analysis to support enhancements in the application, with a focus on enhancing inventory management systems in backend.
- Created process flow diagrams, use case diagrams, and ER diagrams using Microsoft Visio improving communication between business and technical teams during Agile sprints.
- Applied Agile methodologies to manage data-driven projects, partnering in data analysis efforts that informed system updates and enhanced reporting accuracy of application.
- Used PL/SQL procedures to analyze and resolve business process issues, documenting high-level system flows and optimizing order and inventory systems to improve data accessibility.
- Conducted API testing using Postman, created user stories for endpoints, and identified performance bottlenecks (payload sizes, request frequencies, response times). Optimized JSON structures to ensure real-time updates on the UI.
- Gathered requirements for development of interactive Power BI dashboards to visualize key performance metrics and identify inefficiencies post-implementation.

Federated Insurance - Software Development Project

June 2023 - Aug 2023

- Collaborated with Federated Insurance through a class project to improve stability of a Java service that routes traffic during system outages.
- Efficiently debugged code and fixed a critical memory leak in the backend Java service, reducing memory consumption by 40% and improving system stability.
- Partnered in development of a React.js data dashboard for real-time visualization of classification metrics, allowing SREs to proactively monitor traffic loads during outages.

Tech Help (UMN TC) - Technology Help Specialist

Sep 2022- Dec 2022

- Identified and addressed recurring software compatibility issues on university computers.
- Conducted assessments to pinpoint areas for improvement in system configurations.
- Recommended and implemented standardized software packages and version controls.
- Improved efficiency of student projects resulting in a 20% reduction in system downtime.
