

AKSHAY PATEL

DevOps Engineer

Phone: (706) 675-5251

Mail: mail2akshaypatel1976@gmail.com

PROFESSIONAL SUMMARY:

- Overall 5+ years of extensive IT experience, particularly focused on DevOps & Cloud Engineering with Azure, AWS Cloud, Configuration Management, and Linux Administrator.
- Demonstrated expertise in cloud implementations (AWS, Azure) involving code compilation, packaging, debugging, automation, deployment, and management across multiple environments.
- Responsible for creating infrastructure as code using Terraform to define and provision complete environments, including infrastructure components, modules, and dependencies.
- Proficient in architecting and configuring public/private cloud infrastructures utilizing Amazon Web Services (AWS) such as EC2, Elastic Load Balancers, Elastic Kubernetes Service, S3, RDS, DynamoDB, VPC, Direct-Connect, Route 53, CloudWatch, Kinesis, CloudFormation, IAM, and Lambda.
- Proficient in managing Kubernetes using Helm charts, ensuring reproducible builds, customizable deployments, and smooth releases of Helm packages.
- Experience in creating and deploying Docker images to Kubernetes clusters, ensuring seamless operation.
- Automated deployment and management of infrastructure using Terraform, creating and maintaining Terraform templates for provisioning servers, databases, and networking resources.
- Utilized various AWS resources and services, including VPC, EC2, RDB, S3, IAM, EBS, Security Groups, Auto Scaling, SES, SNS, RDS, Route53, and Lambda for setting up and building AWS infrastructures using CloudFormation JSON templates.
- Created Jenkins-based CI/CD system on Kubernetes container environment, leveraging Kubernetes and Docker for building, testing, and deploying applications.
- Managed Amazon Redshift clusters, handling cluster launches and node type specifications.
- Built and configured virtual data centers in AWS, including Virtual Private Cloud (VPC), subnets, security groups, route tables, and Elastic Load Balancer (ELB) to support enterprise data warehousing.
- Experience with building systems using Team Foundation Server (TFS).
- Implemented Azure for securing web applications and deploying them to the platform.
- Expertise in automating, configuring, and deploying instances on AWS, Azure, and data centers.
- Worked with Atlassian products such as JIRA, Confluence, and Bitbucket.
- Designed highly available, cost-effective, and fault-tolerant systems using AWS services such as EC2, S3, Auto Scaling, Elastic Load Balancer (ELB), AMIs, and Glacier for QA, UAT environments, and infrastructure servers.
- Utilized AWS Elastic Beanstalk for deploying and scaling web applications and services developed with various technologies.
- Worked with CloudFormation, Ansible, Chef, and Terraform for automated deployments of AWS and OpenStack.
- Experience in complete software development life cycle (SDLC) with Agile, Scrum, JIRA, and Waterfall methodologies.
- Deployed and managed EC2 instances on AWS, encompassing various Linux and Windows flavors.
- Worked on Azure Synapse Analytics for implementing PySpark Notebooks.
- Executed pilot migrations of Dev/Test workloads to Azure using Azure Site Recovery.
- Created and deployed VMs on Microsoft Azure, managing virtual networks, Azure AD, and SQL.
- Skilled in writing automation scripts to support infrastructure as code in AWS/Azure and performing Linux/Windows Administration.
- Proficient in developing and running Shell, Perl, and Python scripts.
- Worked with Ansible and Terraform to provision resources from multiple cloud service providers, including AWS and Azure.
- Experience in developing and deploying applications using JBoss, IBM WebSphere Application, and Apache Tomcat.
- Proficient in installation, configuration, maintenance, and troubleshooting of various Linux distributions and Windows Servers.
- Solid understanding of Java, C, and C++.
- Proficient in cloud provisioning tools like Terraform and CloudFormation, serving as a champion for their usage.
- Experienced in executing XML, Ant, Shell, Perl, and JavaScript scripts, as well as Java scripts.

TECHNICAL SKILLS:

AWS Services	RDS, EC2, EKS, ECR, VPC, IAM, Cloud Formation, EBS, S3, ELB, Auto Scaling, Cloud Trail, SQS, SNS, SWF, Cloud Watch, AWS Glue, Secret Manager.
Cloud Platforms	Microsoft Azure, AWS, GCP.
Azure Services	Virtual Machines, App Services, Key vault, function app, Blob storage, Azure Active Directory (Azure AD), Service Bus, Azure Container Registry (ACR) and Azure Kubernetes Service (AKS), Azure SQL, Azure Cosmos DB.
Version Control Tools	Git, GitHub, GitLab, Bit Bucket and Azure Repos.
CI/CD	Jenkins, Azure Pipelines, GitLab CI, Circle CI, Travis CI, Argo CD, GitHub.
Configuration/Automation/Infrastructure Tools	Ansible, Puppet, Chef, Terraform, AWS Cloud Formation, Azure Resource Manager (ARM).
Container Platforms	Docker, Kubernetes, Spinnaker, OpenShift, Helm.
Monitoring Tools	Nagios, Splunk, Datadog, Grafana, Prometheus, CloudWatch Logs, Azure Monitor.
Languages/Scripting	Java J2EE, Python, Shell scripting, PowerShell, YAML, XML, Go Lang, Groovy Scripts.
Build Tools	Maven, Ant, Gradle, MS Build.
Artifactory	JFrog and Nexus.
Application/Web Servers	Nginx, IIS, Httpd, Tomcat, Apache, Web sphere.
Documentation	Confluence.
Operating Systems	Microsoft Windows XP/NT Pro 2000, Linux, UNIX, RHEL, CentOS, Solaris, Ubuntu.
Tracking Tools	Jira, Azure Boards.
Code Scanning	SonarQube, JFrog, Veracode, X ray, ECR Inspector.
Databases	RDS, Cosmos DB, Postgres, MS SQL, Cassandra, My SQL DB, Mongo DB, Data Lake.
Logging	Cloud Watch, Cloud Trail, Azure App Insights, Azure Monitor.
Deployment Tools	Azure DevOps Server, Octopus.

PROFESSIONAL EXPERIENCE:

Client: RVO Health | Jan 2023 to till date

Role: Cloud DevOps Engineer / SRE

Responsibilities:

- Successfully migrated over 50 applications, including 100 sub-applications, to DEVOPS standards.
- Developing a specialized application to help individuals find treatment options and search for doctors or hospitals using Angular for the front-end and Java for the back end.
- Extensive experience in designing and implementing architectures for EC2 instances on AWS, ensuring high availability and security compliance.
- Installed monitoring and alerting systems for CI/CD components using tools such as Nagios, CloudWatch, ELK Stack, and Azure Monitor.
- Experience with NAGIOS for server monitoring and alerting services.
- Expertise with source code management tools like Tortoise SVN and GitHub, as well as version control systems such as Subversion, Perforce, and GIT.
- Managed S3 buckets on both platforms, implementing policies, lifecycle management, and ensuring data storage optimization.
- Provisioned and configured various environments, including Hadoop EMR clusters, OpenShift platforms, and Kubernetes deployments.
- Utilized Docker for container-based deployments, managing images, registries, and integrating with Kubernetes.
- Designed event-driven architectures using AWS EventBridge and similar services for seamless service communication.
- Developed PowerShell scripts for system automation and administration tasks, including managing Active Directory and system configurations.

- Installed and configured servers across different environments, including RHEL, Unix, and Windows, utilizing various management tools like WinRM and SSH.
- Implemented and managed TCP/IP networks in diverse environments, ensuring connectivity and security.
- Used AWS Secret Manager and similar tools for securely managing sensitive credentials.
- Developed and maintained ETL jobs using AWS Glue, Azure Synapse Analytics, and other services for efficient data processing.
- Managed and optimized data pipelines using tools like Apache Airflow, Cribl, Vector, and Azure Databricks.
- Proficient in front-end technologies and Core Java programming, integrating with platforms like AEM for web experiences.
- Developed Ansible playbooks for software configuration, deployment, and maintenance tasks.
- Automated build and deployment processes using tools like Maven, Jenkins, Harness, and Octopus Deploy.
- Managed CI/CD pipelines with tools like Concourse CI, Jenkins, and Azure Pipelines for web applications and microservices.
- Implemented VM automation pipelines and infrastructure as code using tools like Terraform and Azure Bicep.
- Managed artifact repositories like Artifactory for building artifacts and integrated them with CI/CD pipelines.
- Assisted in setting up Bitbucket repositories and configuring CI/CD workflows for teams.
- Managed accounts, VPCs, Virtual Networks, and other infrastructure components, with a focus on automation and cost control.
- Developed automation scripts in Bash, Python, and PowerShell for encryption, scheduling, and configuration tasks.
- Proficient in SQL, PL/SQL, and database optimization techniques, working with various database systems.
- Designed cost-effective solutions leveraging serverless services and cloud cost optimization tools.
- Deployed and managed Splunk instances for log aggregation and analysis.
- Acted as a Subject Matter Expert (SME) on security testing methodologies, including SAST and DAST, providing expertise on code security analysis.
- Developed tools and scripts for automation using languages like Python and PowerShell to enhance operational efficiency.
- Configured and managed various Azure IaaS components and services alongside AWS deployments.
- Proficient in Node.js for building server-side applications and APIs, leveraging its event-driven, non-blocking I/O model effectively.

Environment: AWS Cloud (EC2/EMR), Azure, Splunk, Spark, Terraform, Control plane, Opsin sight, Kibana, Jenkins, PostgreSQL, Azure CLI, OpenShift, Docker, Cloud Watch, Ansible, Kubernetes, Python Scripts, CICD Pipelines, YAML, Snowflake, GIT, Bash, Linux, AKS, Maven, Nagios, Java/J2EE, Azure Databricks.

Client: Wells Fargo | June 2019 to Aug 2021

Role: DevOps Engineer

Responsibilities:

- Developed Ansible Playbooks to automate build and deployment processes and managed data bags for improved environment handling.
- Created Ansible playbooks for various database configurations to enhance and streamline product setup, transitioning production support scripts to Ansible roles and provisioning AWS servers with Ansible Playbooks.
- Utilized SonarQube for continuous code quality inspection and automatic bug detection.
- Automated Nagios alerts and email notifications with Python scripts executed via Ansible.
- Installed, configured, and maintained Apache Web Server and WebSphere Application Server on Red Hat Linux.
- Gained experience with Red Hat Linux kernel, including memory upgrades and swap management.
- Managed installations using Red Hat Linux Kickstart and Sun Solaris Jumpstart, and configured DNS, DHCP, NIS, NFS, and other network services on Sun Solaris 8/9.
- Utilized multiple EC2 instances and ensured highly durable and available data using S3 data store, versioning, lifecycle policies, and AMI creation for mission-critical server backups.
- Automated deployments with AWS by creating IAMs and integrating Jenkins with AWS using the CodePipeline plugin and set up EC2 instances for virtual servers.
- Implemented Docker-Maven plugin and Maven POM to build Docker Images for microservices, using Dockerfile to build images from Java JAR files.
- Installed external functions like EBS CSI Driver, Elastic Load Balancer, and VPA Controller to create a fully operational cluster.
- Istio Controller on EKS cluster for Service Mesh Networking to control traffic flow.
- Set up and configured the ELK stack on a Kubernetes cluster, designing and deploying Elasticsearch, Kibana, and Logstash manifests on EKS.

- CloudWatch to monitor AWS resources such as EC2 instances, RDS databases, and Lambda functions.
- Used Git for version control and integrated it with Jenkins for a CI/CD pipeline, tracking code quality and managing users with Maven and Ant build tools, and wrote Maven pom.xml build scripts.
- Worked with MongoDB NoSQL database for replica setup and sharding, and managed replica sets.
- Installed, configured, and managed monitoring tools like Nagios for resource and network monitoring.

Environment: Python, AWS (ECR, EBS, EKS, Auto Scaling, Security Group, and RDS), GIT, Ansible, Docker, Maven, SonarQube, Jenkins, Nagios.

Client: MetLife | May 2018 to June 2019

Role: DevOps Engineer

Responsibilities:

- Defined and Implemented CI and Release Management Processes, Policies, and Procedure.
- Configured the Jenkins pipeline for creation of Images, pushing them to ECR and deploying the containerized applications on to Elastic Kubernetes Cluster (EKS).
- Defined service level objectives (SLOs) for data-driven decision-making.
- Configured and automated the Jenkins Pipelines/Build jobs for Continuous Integration and Deployments Dev to Production environments for Tomcat applications using Jenkins Groovy Scripting.
- Designing, deploying, and maintaining the application servers on AWS infrastructure, using services like AWS EC2, S3, Glacier, VPC, Lambda, Route53, SQS, IAM, Cloud Front, RDS, and AWS CloudFormation etc.
- Involved in deploying and managing applications using Elastic Beanstalk, including setting up environments, configuring deployments.
- Configured ansible along with terraform on Jenkins pipeline to deploy certain application-level dependencies on the Worker Nodes of the EKS Cluster.
- Conducted Chaos Engineering experiments to enhance system resilience.
- Analyzed post-incident reviews to drive continuous improvement.
- Implemented proactive monitoring with Prometheus & Grafana for high availability.
- Designing and configuring VPCs by defining IP address ranges, subnets, network ACLs and configuring security groups.
- Wrote Terraform scripts to deploy different AWS Infrastructure components related to the respective services, managed various resources and data elements defined in the scripts.
- Designed and Implemented AWS EKS Cluster using Terraform from Scratch to implement a fully working EKS Multi Node Cluster.
- Developed CI/CD system with Jenkins on Kubernetes container environment, utilizing Kubernetes and Docker for the CI/CD system to build, test, deploy and configured Kubernetes (EKS) to deploy scale, load balance, scale and manage Docker containers with multiple names spaced versions.
- Participated in on-call rotations, ensuring SLA compliance.
- Wrote Docker files for microservice applications and good understanding of volumes and Networking for containers.
- Experience in writing YAML files for Microservices applications.
- Conducted capacity planning for scalable infrastructure.
- Integrated Access Gateway with identity providers, such as AWS SSO to manage access to AWS resources and designed policies to control and secure AWS resources and services.
- Contributed to runbook development for efficient operations.
- Responsible for identifying and troubleshooting performance issues with EC2 instances, RDS databases, and Lambda functions.
- Creating and managing S3 buckets and implemented access controls for S3 buckets, like bucket policies, ACLs, and IAM roles.

Environment: Jenkins, GIT, ANT, MAVEN, Nexus, Ansible, SVN, Shell Scripts, Sonar, Python Scripts, Red Hat Kickstart server, EKS, Splunk, Azure Databricks.

Client: Genpact | Sep 2017 to May 2018

Role: Linux System Administrator

Responsibilities:

- Installed, configured, maintained, and supported RedHat Linux, Solaris, and HP-UX systems.

- Automated tasks using bash scripting and managed user accounts, permissions, and packages with RPM and YUM.
- Troubleshot server issues, configured Yum repository servers, implemented password-less authentication with Fuse, and deployed DHCP servers.
- Designed high availability clustering solutions, administered DNS, LDAP, NFS, NIS, and Sendmail, and managed SAN/NAS storage.
- Provided 24/7 support, managed source control systems (Subversion and GIT), and configured SSH servers and application servers.
- Managed build definitions deployed continuous integration tools (Jenkins/Bamboo), and used Ant and Maven for software builds.
- Assisted with environment setup and replicated Jenkins build server to a test VM.
- Installed and configured Apache and Tomcat web servers.

Environment: CentOS, Linux Ubuntu, Apache, Nginx, Automation (Bash scripting), Monitoring tools (Nagios), Shell scripting, Networking (TCP/IP, DNS, DHCP), Virtualization (VMware, VirtualBox), Security (Firewalls, SELinux).

EDUCATION:

- Bachelors in computer science, Gujarat Technological University (GTU), Ahmedabad, Gujrat, India.
- Master of Science in Business Analytics from Trine University, Angola, IN, USA.
