

ANANDHI GUNNIYA MOHANRAM

anandhi.066@gmail.com | +1 (240) 660-6526

SUMMARY

- Over 8 years of experience in software testing, data analysis, and UI/UX design.
- Experienced in manual testing, defect tracking, and ensuring software quality across web-based applications, with hands-on expertise in Agile methodologies, sprint planning, and team collaboration.
- Experienced in preparing test scenarios, test cases and executing test cases in diverse environments (Training, QA), validating backend data using SQL, and maintaining requirement traceability using tools like Team Foundation Server (TFS).
- Performs Section 508 accessibility compliance testing and troubleshooting cross-browser compatibility issues using developer tools.
- Collaborates closely with cross-functional teams, including developers and business analysts, to clarify requirements and address issues efficiently.
- 1+ year of experience as a data analyst with strong process orientation, analyzing health data, soliciting stakeholder feedback, and driving process improvements.
- 5+ years of experience in UI/UX design and front-end development of responsive web applications using HTML5, CSS3, and Bootstrap framework.
- Demonstrates strong analytical thinking and the ability to translate data into informative visuals and actionable reports.
- Experienced in developing visual reports, KPI dashboards, and scoreboards using tools like Power BI and Tableau Desktop.
- Capable of transforming design concepts and constraints into high-fidelity wireframes, interaction mockups, user experience flows, and functional UI prototypes.
- Experienced in managing visual layouts, aesthetics, and ensuring browser compatibility.
- Experienced in creating visual design prototypes using tools such as Adobe Dreamweaver, Photoshop, Fireworks, and Draw.io.
- Experience in building layout designs using platforms like WordPress and OpenCart, including plugin integration and customization.
- Strong foundational knowledge in data analytics, graphic design, logo design, wireframing, interactive design and development, requirement analysis, usability testing, and documentation.

EDUCATION

- Bachelor of Engineering in Computer Science, 2009

EXPERIENCE

- Presently working as a Test Engineer at adroitts, USA, Since April 2024 to Present.
- Worked as a Data Analyst at Numpy Ninja, USA, from December 2022 to April 2024
- Worked as a UI Developer & UX Designer at Aalpha Net Solution, India, from August 2010 to February 2016.

TECHNOLOGY STACK

IDE & Project Management Tools:

- Eclipse, PostgreSQL Admin, Jira, Team Foundation Server (TFS)

Technologies & Scripting Languages:

- HTML5, Cascading Style Sheet (CSS), JavaScript (JS), jQuery, Media Query
- Bootstrap Forms, Bootstrap Theme, Bootstrap Layout, Bootstrap Components
- Font-awesome, OpenCart, WordPress, AngularJS, JSON, Python, MS Excel

Data Analytics & Virtualization Tool:

- Tableau, Power BI

Design & Web Accessibility Evaluation Tools:

- Adobe Dreamweaver, Adobe Photoshop, Adobe Fireworks, WAVE Plugin

Database:

- PostgreSQL

PROFESSIONAL EXPERIENCE

Jr. Software Tester – Digital Infuzion LLC, Rockville, MD (April 2024 to Present)

CRMS - Resource Scoring and Protocol Abstraction & Clinical Document Assembly and Review

The Resource Scoring and Protocol Abstraction (RSPA) application facilitates the management of grant-related studies through resource scoring and protocol abstraction. It enables users to view grant and contract award details, create studies, perform resource scoring, request new protocol numbers, and abstract protocol information. Additionally, it supports quality control (QC) and review processes to ensure the accuracy of the abstracted data.

The Clinical Document Assembly and Review (CDAR) application streamlines the development and review of protocol-related documents, including Protocols and Informed Consent Forms. It allows users to import protocol document templates, create documents based on those templates, and insert reusable document assets. CDAR also supports exporting documents for offline editing or read-only access, re-importing them as new versions, and comparing inserted assets to ensure consistency and accuracy.

Responsibilities:

- Assist in understanding business and functional requirements to develop test cases and scenarios.
- Execute manual test cases for web-based applications in various environments such as QA and Training.
- Perform testing types including functional testing, regression testing, and system testing to identify application defects.
- Document test results clearly and accurately.
- Log and track defects in a test management tool (e.g., Team Foundation Server) and retest after fixes.
- Maintain test case libraries and contribute to updating test documentation as needed.
- Collaborate with senior testers and developers to understand the test plan and support test case preparation.
- Prepare test data and assist in setting up the test environment for execution.

- Run basic SQL queries to validate data accuracy in the backend and ensure correct data flow within the application.
- Use tools like TFS to log bugs, execute test cases, and monitor progress.
- Perform basic Section 508 compliance checks under guidance.
- Attend daily stand-up meetings, sprint planning, and retrospective sessions.
- Provide updates on testing tasks and participate in backlog grooming with the testing team.
- Learn testing methodologies, SDLC processes, and defect management practices from senior team members.
- Receive mentorship and on-the-job training on tools, automation basics, and testing standards.
- Support user acceptance testing (UAT) sessions by helping with test execution and capturing feedback.
- Assist in preparing simple training materials or walkthroughs as directed.

Data Analyst – Numpy Ninja, USA (December 2022 to March 2024)

Sepsis Monitoring Systems

A clinical intelligence platform that detects sepsis by accurately alerting clinical staff to enable early intervention, improve patient outcomes and reduces the cost of care. Sepsis Monitor's intuitive analytics dashboards provide a comprehensive view of sepsis program performance to drive impactful Plan-Do-Study-Act (PDSA) that improves alert performance, bundle compliance, and sepsis performance and outcomes.

Responsibilities:

- Visual Story-teller skilled at creating insightful representations from datasets for soliciting feedback from the stakeholders and incorporating the same to enhance efficacy of processes.
- Worked with clinical dataset for designing a KPI dashboard (Length of stay, throughput etc...) for ICU Sepsis patients using Tableau calculated field, Level of Detail (include, exclude, fixed), filters, parameters, sets which will help to improve ICU operational efficiency by 30%.
- Determined SIRS using advanced Tableau visualization feature and created a dashboard for the identified SIRS patients' using vitals - HR, temperature, respiration and clinical parameters – PaCo2 and WBC, thus helping the stakeholders to identify and monitor patients more susceptible to the further stages of Sepsis.
- Analysed the role of demographic parameters with respect to sepsis which helped in inferring that patient' in the higher age bracket (65+) especially males have a longer length of stay and are more vulnerable to sepsis as compared to females.
- Identified the dominant biomarkers - WBC, Platelets, base Excess and lactate which plays a significant role in the incidence of Sepsis by using concepts of advanced Tableau like Dual axis, Blended axes, control charts, spark line charts, funnel charts, pareto charts, correlation charts in addition to basic charts like Bar plots, Box plots, scatter plots, heat map and thus requires regular monitoring by the clinicians.
- Used python pandas / Numpy library for data cleaning, data wrangling and missing data analysis.
- Adept in Python visualization libraries like Matplotlib and seaborn for deriving insights through exploratory data analysis.
- Data preparation from relational database using PostgreSQL by using SQL queries.
- Implemented Machine Learning algorithm -Boost and achieved AUCROC = 81.

- Applied weighted hyperparameter feature for improving the data imbalance to 90 % and hence model performance by 70%.
- Used Stratified k-fold cross-validation to evaluate the performance of the model.
- Involved in the process of implementation Agile Methodology using Scrum and Trello.

UI Developer/UX Designer- Aalpha Net Solution, India (August 2010 to February 2016)

Matrimonial Management Systems

A web application that supplies a framework to provide to modern responsiveness layouts, informative pages, registration and manages all aspects of the profile management, interested profile, chat, view profile data, normal and advance search functions, membership management etc. for the end users. also, it manages administrative features like user management, membership plan management, payment management, content management system (CMS) for admin users.

Responsibilities:

- Develop light weight with modern look and feel, responsive design layout.
- Develop responsive web design application using Bootstrap, HTML5 and CSS.
- Develop responsive theme design using Media Query, jQuery, HTML5 and CSS3 and Bootstrap framework.
- Develop low-fi wireframes, conceptualization, visual communication, drawing.
- Develop applications following Section 508 accessibility and usability standards.
- Develop a UX design to support rich user experience and light weight code that makes it a great theme for small or medium-sized business to get up and running quickly.
- Evaluate usability of existing features and recommend changes.
- Develop create custom UI elements, interactions, and data visualizations.
- Develop high-fidelity mock-ups and prototypes.
- Develop web application to support cross-browser compatibility.
- Troubleshoot and analyse websites and applications using developer tools.
- Understating the requirements and preparing the design documents by interacting with UX peers, developers, and its stakeholders.

CERTIFICATIONS/TRAINING

- NIH Information Security and Management Refresher Training 2025

ACCOMPLISHMENTS

- Participated in SQL Boot Camp, SQL Hackathon, and Datathon events at Numpy Ninja, USA
