PROFESSIONAL SUMMARY

Innovative and results oriented Full-Stack Software Engineer with 7 years of experience in designing, developing, and maintaining web-based enterprise applications. Proven expertise in delivering scalable, high quality software using Java, Spring, Hibernate, MySQL, and various web technologies. Skilled in managing all phases of the software development life cycle (SDLC) and deploying applications in Unix environment and cloud environments such as AWS and GCP. Strong communicator and effective mentor with a passion for clean code and continuous learning, seeking a full-time role to contribute technical expertise and drive impactful solutions.

TECHNICAL SKILLS

Languages: Java, SQL, HTML, CSS, JavaScript, TypeScript, Python, Bash

Frameworks: Spring Boot, Spring Security, Hibernate, JPA, Flask, Django, FastAPI, React.js, Flutter

Web Technologies: HTML5, CSS3, Bootstrap, Tailwind, RESTful APIs, JSON, XML, JSP, Servlets

Databases: MySQL, PostgreSQL, Oracle, MongoDB, Firebase

DevOps & Cloud: AWS (EC2, S3, RDS, Lambda, Fargate, IAM), GCP, Docker, Jenkins, Maven, Tomcat, JBoss, Postman, GitLab, GitHub, CI/CD, Terraform, Unix/Linux

Tools: IntelliJ, Eclipse, VS Code, Jira, Notion, Trello, Git

Mobile Development: Swift (iOS), Java (Android), Flutter/Dart

Methodologies: Agile (Scrum), Test-Driven Development (TDD), CI/CD, Code Review, Version Control, SDLC

PROFESSIONAL EXPERIENCE

Software Engineer II

Alesig Consulting (U.S. Department of Labor Project) – Remote | *May 2022 – Feb 2025*

- Modernize federal legacy systems by migrating legacy Struts 1 and Struts 2 applications to Java Spring Boot, increasing system performance by 20% and reducing downtime by 30%.
- Develop and maintain full-stack Java EE applications for government agencies using Java, Spring MVC, Spring Boot, Hibernate, and MySQL.
- Manage deployments in a hybrid infrastructure environment, including on-premises Unix/Linux servers and AWS EC2 instances.
- Integrate multi-factor authentication (MFA) with Spring Security to improve application security and ensure federal cybersecurity compliance.
- Refactor legacy code to improve performance, incorporate security fixes and upgrade libraries.
- Build CI/CD pipelines with Jenkins and GitLab, reducing deployment time by 5% and ensuring rapid and consistent production releases across multiple environments.
- Participate in all SDLC phases, including requirements analysis, design, development, testing, deployment, and maintenance.
- Create and maintain REST APIs for internal and external integrations.

PROFESSIONAL EXPERIENCE (Continued)

- Mentor junior developers and review code for adherence to coding standards.
- Automate data processing and reporting pipelines using Linux shell scripts and SQL, reducing manual workload by over 50%.
- Apply Test-Driven Development (TDD) practices with JUnit, resulting in higher test coverage and fewer production bugs.
- Create and maintain SOPs, technical processes, deployment guides, and functional feature documentation.

Full-Stack Engineer

ONYX LLC – Remote | *May 2019 – Dec 2021*

- Lead deployment of a full-stack mobile app to Google Cloud Platform (GCP)
- Design a cross-platform UI using Flutter and Dart, unifying iOS and Android codebases for faster, more consistent release cycles.
- Build native mobile app components in Swift (iOS) and Java (Android), improving user engagement.
- Develop and optimize Python Flask backend services, improving API response times by 30%.
- Collaborate with product and design teams to ship new features aligned with customer needs and business goals.
- Conduct comprehensive code reviews and refactoring across backend Python and frontend mobile layers, improving maintainability and reducing technical debt by 30%.
- Integrate third-party APIs such as Firebase Authentication and OAuth providers (Discord, Gmail, YouTube, Twitch) into mobile application to enable seamless, secure multi-provider login and enhance the user onboarding experience.

LAMP Stack Developer

Opsmart – Gaithersburg, MD | June 2017 – February 2019

- Reduce latency by over 15% and improve user experience by optimizing, updating, and maintaining a client-facing website using HTML, JavaScript, and PHP.
- Boost application reliability and performance by architecting and integrating comprehensive automated test suites using PHPUnit, enabling early detection of regressions and ensuring consistent functionality across development cycles.
- Optimize SQL queries and manage MySQL database schema changes.
- Use Unix shell commands for deployments, logs analysis, and bug troubleshooting.
- Configure and maintain Linux CentOS environments for new hires, streamlining the onboarding process and ensuring consistent development setups across the team.

EDUCATION & CLEARANCE

Bachelor of Science in Computer Science

University of Maryland Global Campus – Adelphi, MD

Clearance: U.S. Citizen – Public Trust
