

PROFESSIONAL SUMMARY:

- Around 5+ years of experience in the IT industry, comprising Java/J2EE enterprise web application design, development, maintenance & support involving all SDLC activities like requirements analysis, design, implementation, reviews, unit testing, integration testing, and production deployments. Worked on Amazon Web Services like EC2, ELB, VPC, S3, Cloud Front, IAM, RDS, Route 53, Cloud Watch, SNS, Auto Scaling, Elastic Load Balance, AMIs, Dynamo DB, firewalls, routing technologies, and DNS, Amazon RDS DB services.
- Professional experience in using core Technologies: **Java, J2EE, Servlets, JSP, JDBC, JavaBeans, JavaScript, JNDI, HTML, XML, Web services, AngularJS, Bootstrap framework, jQuery.**
- Good experience working with Amazon **Web Services** like **EC2, S3, Amazon Simple DB, Amazon RDS, Amazon Elastic Load Balancing, Amazon SQS, AWS Identity and Access Management, AWS Cloud Watch, Amazon EBS, and Amazon CloudFront.**
- Experience in working with the Struts **framework, Hibernate, and MVC** architecture.
- Worked on Hibernate for mapping the Java objects to a relational database and SQL queries to fetch, insert, and update the data from the database.
- Expertise in using **Oracle, SQL Server, MySQL** databases, and writing SQL and PL/SQL queries.
- Experience in using Web/Application servers like **WebLogic, JBoss, Glassfish, and Tomcat.**
- Well experienced in functional and technical systems analysis & design, system architectural design, presentation, process interfaces design, process flow design, system impact analysis, and design documentation and presentation.
- Experience in working on the **MVC** pattern using AngularJS, creating a user interface, and a single-page web application.
- Experience in JVM Performance Tuning: Garbage Collector and Heap Analysis, Thread dumps, Heap dumps, Memory Leaks, Connection Leaks, Core Dump, Profiling, Refactoring.
- Extensive knowledge in database transaction management for database-related changes by integrating **JDBC, Hibernate, and Spring Boot.**
- Experience with Data structures & Algorithms like Stack, Queue, Linked List, Linear search, bubble sort, and binary search algorithms, etc.
- Used **GitHub** for the version control.
- Having sound Knowledge in **NoSQL** databases like **DynamoDB and MongoDB**
- Experience in the design and maintenance of database platforms like **JDBC and Hibernate.**
- Experience in **UNIX/Linux** shell scripts for data-driven automatic processing.
- Selecting the appropriate **AWS** service based on compute, data, or security requirements.
- Experience in the Integration of Amazon Web Services **AWS** with other applications and infrastructure.
- Experience in developing applications using **TDD** (Test Driven Development) & Unit testing process.
- Utilize **EBS** to store persistent data and mitigate failure by using snapshots.
- Experience in using Jenkins for Continuous Integration and Sonar jobs for Java code quality.
- Experience in writing **ANT, Maven** build scripts, providing logging facility using Log4j, and Writing JUnit test cases.
- Good experience in the SCRUM process of Agile (Iterative) development methodology.
- Setting up AWS Oracle **RDS** databases for a new project, using Data Pump to migrate data to Relational Database Services (RDS).

TECHNICAL SKILLS:

Operating systems:	UNIX, Linux/Solaris, Windows.
Programming Languages:	Java, J2EE, python, C and C++.
Technologies:	Servlets, JSP, JSTL, JDBC, JAX, JNDI, EJB, JMS, XML, XSLT, AJAX, HTML, JavaScript, AngularJS, jQuery, Backbone JS, GWT and Web services.
Build Tools:	Ant, Maven.
Database Tools:	Oracle 11g, 10g/9i, MySQL, PostgreSQL, Dynamo DB and MongoDB.
Frameworks:	Spring4.0, Spring MVC, Struts2.3.3, Hibernate4.3.0, JSF 2.2.
Application Servers:	IBM Apache Tomcat, Glassfish, WebSphere, JBOSS, WebLogic and AmazonEC2.
Java IDEs:	NetBeans, Android Studio, IBM RAD, Eclipse.
Utilities:	Log4j, Junit, TOAD, JMeter.
Cloud Computing:	Amazon EC2, Amazon S3, Amazon RDS, AWS Lambda, Amazon SQS, AWS Identity and access management, AWS CloudWatch, Amazon EBS other services of the AWS family.

PROFESSIONAL EXPERIENCE:

Atlanticus Holdings Corporation, Atlanta, Ga.
Java with AWS Developer

Oct 2023 to Present

Responsibilities:

- Developed an overall new layout of the web portal.
- Involved in all the phases of the portal changes - analysis, design, development, testing, and deployment.
- Developed User Interface using **HTML**, **Bootstrap**, **CSS**, **JavaScript**, and **AngularJS**.
- Utilized Spring framework features, including **Spring IOC**, **Spring AOP**, and **Spring Batch**.
- Spring configuration files are created for dependency injection.
- Designed and deployed XML files for Dispatcher Servlets, Application Context, and Controllers to implement the Inversion of Control (**IOC**) module in Spring.
- Developing micro services in a cloud environment.
- Developed new user-facing features using **React.js**.
- used CloudFormation templates (**CFT**) to find the resources needed for the formation of cloud formation stacks
- Used a **NOSQL** database, Amazon DynamoDB, to store data of the reporting Application.
- Used Amazon CloudWatch to monitor **AWS** services and Amazon CloudWatch logs to monitor the application.
- Implemented Object-relation mapping in the persistence layer using the Hibernate (ORM) framework. Extensively used DAO patterns, including mapping DAO objects, a configuration file, and classes to interact with the database.
- Developing Web pages by using HTML5, CSS3 with LESS, AngularJS, and Angular UI Bootstrap.
- Developed a **Java API** to interact with the **Amazon SQS** used in sending bulk emails.
- Generated **JSON** format data packets from the middle-tier controller to the front-end using Jackson JSON API.
- Used **JSON** for data exchange between the browser and server. Used **JSR353** for processing and manipulating **JSON** objects.
- Modeled **JSON** data from the database and coded request handlers for parsing and sending relevant data to the client (browser) side.
- Developed web services using **JAX-WS** to interact with legacy applications (backend processes).
- Used **Apache SVN** for repository management and **Ant** for build management.
- Updated database scripts to accommodate changes due to UI overhaul (for both **Oracle** and **PostgreSQL**).
- Involved in writing SQL stored procedures on **Oracle** and **PostgreSQL**.
- Developed an interactive web application using **Node.js**, a pure JavaScript application framework.
- Selecting the appropriate **AWS** service based on compute, data, or security requirements.
- Integration of Amazon Web Services (AWS) with other applications' infrastructure.
- Experience working with **Docker** to improve our (CD) Continuous Delivery framework to streamline releases
- Used **JIRA** for defect management and to keep track of bugs and issues.
- Built an application using **MAVEN** and used **Log4J** to generate log files for the application.
- Extensively implemented Spring Boot, dependency Injection (**DI**), and aspect-oriented programming (**AOP**) features along with Hibernate.
- JUnit/Mockito Frameworks were used for performing unit & integration testing by writing test cases.
- Used client-side **MVC** frameworks like **AngularJS** for Single Page Application developments.
- Ported the application's native application and database servers from **WebSphere/Oracle** to **JBoss/PostgreSQL**.

Environment: Java/J2EE, Spring 3.2.5, Hibernate 4.0, Struts 2.3.3, EJB 3, Windows (development), RHEL 5 (deployment -JBoss), WebSphere 8, JBoss EAP 5, Bootstrap, Java Script, AngularJS, Node Js, Oracle 11g, PostgreSQL9, UML, SVN, AJAX, ExtJs 3.3, JSR 353, JNDI, JAX-WS, Ant, AWS (Amazon Dynamo DB, Amazon SQS, Amazon Cloud Watch, Amazon Lambda), Agile Scrum.

Amdocs, India,
Java with AWS Developer

March 2022 to Aug 2023

Responsibilities:

- Designed and developed an application using Spring **MVC** and Spring Templates.
- Used various Core Java concepts such as Exception Handling, Collection APIs to implement various features and enhancements.
- Used Spring Core for the concept of Inversion of Control (**IOC**) and implemented using dependency injection.
- Used Oracle 11g hosted in Amazon RDS as the Database.
- Designing, coding, unit testing, defect fixing, deployments, issues debugging, etc., for multiple modules in CONGO.

- Used Hibernate for connecting to the database and mapping the entities by using Hibernate annotations.
- Designed and developed the framework to consume the web services hosted in Amazon **EC2** instances.
- Worked with **Spring Core**, **Spring MVC** Framework for Dependency Injection (DI), and Spring Context to provide message sources.
- Building reusable components and front-end libraries by using **React.js**.
- Amazon **EC2** is also used for deploying and testing the lower environments, such as Dev, INT, and Test.
- Amazon **IAM** was used to maintain the user credentials and was also involved in creating custom **IAM** policies for various groups defined within the organization.
- Amazon S3, an object storage service, is used to store and retrieve media files, such as images.
- **CloudWatch** is used to monitor the application and to store the logging information.
- Involved in writing **Java API** for Amazon Lambda to manage some of the **AWS** services.
- Exported **SQL** data into Elastic Search to allow much faster and scalable user searches from the database.
- Developed an **AngularJS** Single Page Application consuming **JSON** data from RESTful services.
- Used AngularJS framework for building web-apps and is highly efficient in integrating with RESTful services.
- Debugging production issues, root cause analysis, and fixing.
- Developed front end using **JSF**, **JSTL**, **HTML5**, **CSS3**, **JavaScript**, **jQuery** and **AngularJS**.
- Developed Junit test classes for unit testing purposes.
- Involved in setting up **Maven** configuration and helping with Continuous Integration (**CI**) Issues.
- Developed a server running script for automation using the **JBoss** application server
- Extensively used **GIT** as the version control Tool.
- Configured **Log4j** for adding the debugging information in the code base.
- Involved in debugging the defects, code review, and analysis of Performance issues.
- Integrated different other modules with the existing reporting applications.
- Extensively used JUnit/Mockito and developed JUnit test classes.
- Involved in Jenkins configuration.
- Worked on production issues, used JIRA for issue tracking.

Environment: Java, Multithreading, core Java, Spring 4.0, Hibernate ORM 4.3.0, Spring web-flow, Spring MVC, Spring AOP, Spring Hibernate, JSP, JSF 2.2, JSTL, HTML5, CSS3, Ajax, Java Script, AngularJS, Node Js, XML, Web services (Soap and Rest), JBoss 6.3, Oracle11g, Amazon EC2, Amazon S3, Amazon Cloud Watch, AWS Lambda, Amazon IAM, Elastic Search, GIT, JIRA, Junit, Unix, Log4j.

Navit Software Solutions Pvt Ltd, India,
Senior Java Developer

May 2021 to Feb 2022

Responsibilities:

- Utilized Spring framework features, including Spring **IOC**, Spring **MVC**, and Spring Batch.
- Created **POJO** classes and spring configuration files to use dependency injection.
- Introduced the concept of rich web-based user interface design with the implementation of an **AJAX**-based JavaScript framework.
- Developed the services for auto and home policy premium derivation by interacting through **EAI** Services and Web Services for Quote.
- Developed Hibernate mapping file and the **HQL** queries for retrieving data from the Oracle database.
- Used **IBM** WebSphere Application Server and **RAD** to develop the application.
- Used **MySQL** as the backend Database.
- The **Javadoc** tool parses the declaration and documentation comments in a set of Java source files and produces a corresponding set of HTML pages.
- Used Hibernate in the data access layer to access and update information in the database.
- Involved in integrated unit testing and code review.
- Developed Junit test cases for all the developed modules.
- Implemented WSDL XML document to locate and describe the Web services.
- Implemented JAXB to convert XML to Java object and Java object to XML.
- Debugging production issues, root cause analysis, and fixing.
- Integrated different other modules with the existing reporting applications.

Environment: Java, Spring 3.1, Hibernate 4.0, JSF, JSP, HTML5, Ajax, JavaScript, Web Services, MySQL, WebSphere 8.5, IBM ClearCase, Junit.

EDUCATION

- Master's in Computer Science at Kennesaw State University
