

EDUCATION

University at Buffalo, The State University of New York
Masters in computer and information sciences; GPA: 4.0/4.0

Aug 2022 - Dec 2023

Relevant courses: Data Science, Introduction to Statistical Learning, Data Structures and Algorithms, Database Management Systems, Object Oriented Programming, Advanced Operating Systems, Network Architecture.

National Institute of Technology, Durgapur, West Bengal, India
Bachelor of Technology ; GPA: 3.5/4.0

Jul 2016 - Apr 2020

TECHNICAL SKILLS

Programming and Scripting Languages: Java, JavaScript, C++, C, R, Python, XML, JSON, Shell, HTML/CSS, C#

Developer Tools: VS Code, JIRA, Eclipse, IntelliJ, Hibernate

Frameworks: SpringBoot, Spring, React JS, .Net, Node js, JSP

Operating Systems: Windows, Linux (Ubuntu, Redhat)

Containerisation: Docker, Kubernetes, Microservices

Database: MySQL, PostgreSQL, DB2, MongoDB, NoSQL

Networking: DNS, TCP/IP, VPN, Load Balancing, Firewall

Protocols: TCP/UDP, SSH, STP, HTTP/HTTPS, DHCP

Web Technologies: RESTful APIs, GraphQL, SOAP

Cloud Platforms: AWS, Azure

Software Principles: MVC, Agile Methodologies(Scrum), TDD

CI/CD: Jenkins, Maven, Gradle, Git/GitHub

Testing Frameworks: JUnit, Mockito, TestNG

WORK EXPERIENCE

University Of Nebraska System, Lincoln, NE | Application Developer.

Apr 2024 – Present

Stack : Java, JavaScript, React, Springboot, Rest API, Spring MVC, Thyme-leaf, SQL, JMeter, JUnit, Mockito, Splunk

- Developed, maintained and enhanced NESIS Enterprise Tools Application with help of Java, Spring Boot, Spring MVC.
- Implemented Hibernate ORM for robust integration with SQL databases, optimising SQL queries, utilising lazy loading, and effective indexing, resulting in a 25% improvement in data transaction speeds and a 35% speed-up in data retrieval processes..
- Deployed JUnit test suites for automated testing, and leveraged Splunk to monitor test logs and performance metrics, resulting in a 40% reduction in debugging time and improved overall system reliability.

NITS Data, Frisco, TX | Software Intern

Jul 2023 – Dec 2023

Stack : Java, SDLC, Postman, Jira, Github, JSON

- Conceptualised to design, development, and deployment of Java applications, driving 80% of project completion, maintained 90% coding standard adherence through active code reviews.
- Proposed and contributed to integration of new features and enhancements to existing applications, playing a key role in 70% of feature developments and application improvements.

Mitel Communications Private Limited, India | Senior Associate Software Engineer

June 2020 – Aug 2022

Stack : Java, SpringBoot, Rest API, Hibernate, MySQL, GraphQL, React, Kubernetes, Docker, Microservices, AWS S3, AWS EC2

- Transformed 10000+ lines of Java Cobol code into efficient, maintainable RESTful Micro-services, facilitating integration of legacy systems with modern applications.
- Integrated legacy services from monolith to Micro-services deploying Java, Spring Boot, REST API, optimised and enhanced functionality of code by 75%.
- Converted legacy code to micro-services resolved 100+ complex issues and simplified all code logic using latest Java features.
- Reduced execution time and speed by 40% while streamlining all intricate logic. Configured Jenkins pipeline and GitHub for code maintenance.

Associate Software Engineer

- Developed web application for Ray Baum operating TypeScript, JavaScript, React JS, HTML, CSS to display dashboard of customer analytics by saving maintenance cost by 3x.
- Addressed over 30+ high-priority customer issues, demonstrating effective problem-solving and customer-centric approach.
- Configured Maven as build automation tool and implemented CI/CD pipeline with Docker, Jenkins, GitHub, and AWS.
- Created 100+ unit test cases and performed regression testing, performance testing with Selenium and involved in code reviews for high quality software delivery.

ACADEMIC PROJECTS

Desktop Surveillance | Python, Open CV, TensorFlow, NumPy Apache Hive

- Led a team in conducting project analysis using Python and Tesseract OCR library, achieving 90% accuracy in remotely monitoring freelancers during off-site engagements.
- Monitoring is done by recording processes opened in system and identifying windows or tabs present (if any) in a screenshot captured periodically for every 3 minutes.

Travel Route & Weather navigator | Node js, API, HTML, JavaScript, React js, MongoDB

- Created distributed web application enabling travellers to access detailed route insights, real-time weather updates, and essential waypoints, leveraging Google API integration and advanced algorithms for effective journey planning.
- Crafted an application ensures a seamless user experience and guarantees data representation accuracy of over 95%, achieving a high level of precision to facilitate smoother travel experiences.
