

Baby Sahithi Samudrala

Java Backend Developer | Spring Boot | Microservices | Kafka

Frisco, TX | (551)-375-7127 | baby.sahithi@hotmail.com

Java Backend Developer with **over 4 years of experience** designing and developing **scalable backend systems** using **Java, Spring Boot, and microservices architecture**. Proven expertise building **high-performance REST APIs, event-driven microservices, and distributed backend platforms** supporting **80K+ enterprise users and 2M+ monthly API transactions**. Experienced implementing **Kafka-based event streaming, Redis distributed caching, and SQL performance optimization**, improving backend scalability, reducing API latency by **30%+**, and enabling reliable service communication across **cloud-native microservices environments on AWS**.

TECHNICAL SKILLS

Programming Languages: Java, SQL

Backend Frameworks: Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate

Microservices & Architecture: Microservices Architecture, Distributed Systems, Event-Driven Architecture, RESTful API Design, API Gateway, Service-to-Service Communication, Backend System Design

Messaging & Event Streaming: Apache Kafka, Event Streaming, Message Queues, Asynchronous Processing

Databases: PostgreSQL, MySQL, MongoDB, Data Modeling, Query Optimization, Indexing Strategies, Transaction Management

Caching: Redis Distributed Caching

Cloud & DevOps: AWS (EC2, S3, RDS), Docker, CI/CD Pipelines, Kubernetes, Jenkins, GitHub Actions, Containerized Microservices Deployment

Testing: JUnit, Mockito, Integration Testing, API Testing

Tools: Git, GitHub, Maven, Postman, Agile/Scrum, Jira

PROFESSIONAL EXPERIENCE

Java Backend Developer | Concentrix, Newark, CA

Mar 2024 - Current

- Developed scalable **Spring Boot microservices** handling over **2M monthly API requests**, improving backend scalability and reducing response latency by **30%** through optimized service communication and database access strategies.
- Designed and implemented **RESTful APIs** supporting transaction processing and workflow automation across distributed backend services, enabling secure system integration for **40K+ active enterprise users**.
- Built **event-driven microservices architecture** using **Apache Kafka**, enabling asynchronous processing and improving backend system throughput by **35% across distributed services**.
- Implemented **Redis distributed caching layer** for high-frequency APIs, reducing database load by **35%** and improving application response times during peak traffic across microservices environments.
- Developed secure backend services using **Spring Security and JWT authentication**, enabling protected service-to-service communication and enforcing access control across enterprise backend systems.
- Optimized **PostgreSQL database performance** through SQL query tuning, indexing strategies, and transaction optimization, reducing reporting query execution time by **28%**.
- Documented backend APIs using **Swagger/OpenAPI**, improving developer productivity and enabling faster integration between frontend applications and backend microservices.

Backend Developer | Optum, India

May 2021 – Jul 2023

- Developed **Java Spring Boot microservices** supporting enterprise healthcare platforms used by **80K+ users**, enabling scalable backend services and reliable processing of large healthcare datasets.
- Built **REST APIs for healthcare data processing and reporting workflows**, improving backend processing efficiency by **30%** while enabling seamless integration between frontend applications and backend services.
- Implemented **Kafka-based asynchronous messaging** enabling distributed processing of healthcare data across multiple backend services and improving system reliability during high-volume data workflows.
- Improved **database performance through SQL optimization and indexing strategies**, reducing data retrieval latency by **35%** and improving backend reporting system performance.
- Developed **unit and integration tests** using **JUnit and Mockito**, increasing backend test coverage to **85%** and improving stability of microservices deployments.

PROJECTS

Distributed E-Commerce Order Processing Platform

- Designed **Spring Boot microservices architecture** for order processing, payment management, and inventory services supporting **high-volume product transactions** across distributed backend systems.
- Implemented **Kafka event streaming and Redis caching**, improving order processing throughput and enabling reliable communication between backend services during peak traffic.

Restaurant Ordering Backend System

- Developed **RESTful APIs using Spring Boot** for menu management, order processing, and payment workflows supporting scalable backend services for high-traffic digital ordering platforms.
- Optimized backend **database queries and service performance**, reducing API response times by **32%** and improving real-time order tracking across distributed services.

EDUCATION

Master of Science in Computer Science | Stevens Institute of Technology, Hoboken, NJ

CERTIFICATION

- AWS Certified Developer – Associate**
- Meta Front-End Developer Professional Certificate – Coursera**
