

BALPREET GURM

Software Engineer

Dallas, TX | (857) 544-2788 | balpreetsgurm@gmail.com | [LinkedIn](#)

SUMMARY

- Results-driven Software Engineer with 3+ years of experience in designing, developing, and maintaining enterprise-level applications across diverse industries, leveraging cloud platforms to drive efficiency, scalability, and high-performance software solutions.
- Proficient in designing and implementing scalable and high-performance applications using Java, JavaScript, Spring Boot, Spring MVC, and Spring Security, ensuring secure and efficient solutions for complex business challenges.
- Developed and deployed RESTful APIs; utilized advanced front-end technologies such as AngularJS and ReactJS to build highly interactive and responsive web applications, ensuring exceptional user experiences.
- Demonstrated expertise in managing and optimizing SQL and NoSQL databases, including MySQL, Oracle, and MongoDB, significantly improving data storage, retrieval, and overall application performance.
- Extensive experience in cloud architecture, having successfully designed and implemented scalable infrastructures on AWS and Azure platforms, leveraging services like EC2, S3, Lambda, RDS, RedShift, Glue, and Blob Storage.
- Skilled in containerization and orchestration using Docker and Kubernetes, standardizing CI/CD pipelines to ensure rapid and error-free deployments across development, testing, and production environments.

TECHNICAL SKILLS

Programming Languages:	Java, JavaScript, Python, SQL, C#
Databases:	MySQL, Oracle, MongoDB, SQL Server
Web Technologies:	HTML, CSS, JavaScript, Bootstrap, XML, jQuery, React Js, Express Js, Restful API, TypeScript
Cloud Technologies:	AWS (EC2, S3, Lambda, CloudWatch, RDS, RedShift, Glue, Athena), Azure
Frameworks:	Spring Boot, Spring MVC, Spring Security, Angular, Hibernate, Node JS
Methodologies:	SDLC, Agile (Scrum), Waterfall
Testing Tools:	Selenium, Postman, JUnit
Version Control Tools:	Git, GitHub, GitLab, BitBucket
IDEs:	Visual Studio Code, Eclipse, IntelliJ IDEA
Other Tools:	Docker, Kubernetes, Shell Scripting, Terraform, Redux, Linux, Bash, Maven, JIRA, RabbitMQ

EDUCATION

Northeastern University	Boston, USA
Master of Science in Telecommunication and Computer Network	Jan 2021 – Dec 2022
Mumbai University	Mumbai, India
Bachelor of Engineering in Electronics and Telecommunication Engineering	Aug 2016 – Jul 2020

PROFESSIONAL EXPERIENCE

Caelius Consulting, Inc	Texas, USA
Software Engineer	Apr 2023 – Present
• Engineered and sustained robust enterprise-level applications utilizing Java, Spring Boot, Spring MVC, and Spring Security, ensuring high performance, security, and scalability across multiple projects. • Developed RESTful APIs while implementing React.js for the frontend, integrating compound backend technologies to enhance data transmission and create more effective, responsive, and dynamic user interfaces. • Designed, fine-tuned, and managed complex SQL queries in Oracle databases, focusing on optimizing overall data access performance and ensuring the efficient execution of critical backend data processing queries. • Leveraged Microsoft Azure platform solutions such as Blob Storage, Data Factory, and Data Bricks to architect and implement 4 scalable cloud infrastructures for data processing, storage, and analysis. • Executed containerization and orchestration of deployments using Docker and Kubernetes, standardizing CI/CD pipelines to accelerate and ensure error-free delivery across development, testing, and production environments. • Conducted comprehensive API testing using Postman on 15+ API endpoints, ensuring functionality, performance, and security against established software quality standards. • Maintained version control using GitHub by overseeing code repositories, performing code reviews, and collaborating with cross-functional teams to track and implement code changes for new features or bug fixes. • Applied the Agile methodology from business analysis and requirements gathering through design, implementation, and deployment phases, ensuring project schedules were adhered to and delivering high-quality software that met client requirements and objectives.	
Neo Prism Solutions	Texas, USA
Software Engineer	Feb 2023 – Mar 2023
• Architected and deployed a comprehensive management system using Java, JavaScript, and Spring Boot, boosting functionality to support a significant increase in user base while maintaining response times under 100 milliseconds. • Refined and managed data strategies by efficiently utilizing AWS S3, Glue, Redshift, and AWS Lambda, leading to improved data retrieval speeds and reduced storage costs. • Crafted and integrated RESTful APIs with JavaScript and GraphQL endpoints, enhancing query efficiency, reducing latency, and increasing data access flexibility, which resulted in noticeably faster API response times and improved overall system performance.	

- Developed and deployed Java-based applications within the Enterprise Application Integration (EAI) Platform, driving complex, seamless integration across enterprise systems and enhancing overall data flow and connectivity.
- Optimized SQL queries and MongoDB databases within the EAI Platform, significantly enhancing performance, data handling, and storage efficiency, leading to improved overall system integration.
- Deployed over 20 RESTful APIs using Express.js, driving seamless interoperability between front-end and back-end components of the Platform, and ensuring efficient data exchange and functionality.
- Architected and optimized the cloud infrastructure for the platform utilizing AWS services including CloudWatch, RDS, RedShift, and Glue, ensuring robust scalability, high availability, and superior performance across integrated applications.
- Designed and implemented dynamic and responsive web interfaces for the platform using Angular and D3.js, creating visually compelling, interactive data visualizations and user-friendly interfaces to streamline interaction with integrated systems.
- Streamlined database interactions by integrating Hibernate ORM for Object-Relational Mapping (ORM), which simplified data access and reduced complexity across 12 interconnected applications.
- Collaborated with cross-functional teams during the EAI Platform development, leveraging Agile methodologies by participating in sprint planning sessions, daily scrums, and retrospectives to ensure timely delivery of integration tasks.
- Executed comprehensive acceptance tests using Selenium, significantly improving software quality by detecting and addressing integration issues early, which streamlined regression testing and enhanced overall system reliability.
- Enhanced version control and code management through Git, facilitating the integration of 30+ new features while maintaining a clean codebase and ensuring precise tracking of changes throughout the development lifecycle.
- Utilized Visual Studio Code for efficient coding and debugging, and managed project tasks with JIRA to streamline development processes and ensure successful, timely project delivery.

Certus Labs
Software Engineer

Mumbai, India
Feb 2019 – Aug 2019

- Implemented J2EE enterprise-level Java applications utilized well-defined subtypes in OOP principles such as inheritance, polymorphism ensured high extensibility, maintainability, and scalability by employing Singleton and Factory design patterns.
- Optimized multidimensional SQL queries and stored procedures in MySQL to accelerate data fetching and improve application performance; planned and developed database structures in accordance with specified standards and business requirements.
- Employed appropriate HTML, CSS, and JS in the creation of web-based interfaces for mobile devices and PCs, ensuring cross-browser compatibility for 5+ web applications, and incorporating dynamic content, sophisticated animations, and interactive elements for enhanced aesthetics and usability.
- Organized application deployment on AWS cloud services, including EC2 for scalable virtual servers, S3 for secure and durable data storage, and AWS Lambda for server less computing; implemented cost-effective and performance-efficient automation for infrastructure management and application deployment.
- Implemented Node.js for backend development, crafted RESTful APIs, and orchestrated the server side of web applications to synchronize the layout between the frontend and backend, enhancing responsiveness and efficiency.
- Integrated Redux in React applications for state management, controlled multiple and complex states in components, and enhanced application performance, leading to improved user interface performance and managing the state for 5+ complex React applications.

PROJECTS

iTunes Web Application

- Created a web application using ASP.NET Core MVC, C#, and HTML5/CSS3, integrating with the iTunes API to search and display song information, crafting a responsive and user-friendly music discovery platform
- Leveraged Http Client Factory and JSON serialization to communicate with the iTunes API, retrieving and parsing search results in real-time, resulting in an average response time of under 500 milliseconds for search requests
- Designed RESTful API using ASP.NET Web API for seamless integration and data exchange with external applications

Child Welfare and Foster Care System

- Implemented a highly efficient child adoption and foster care system by integrating 5+ separate child adoption best practices into a single software application using Java and Java Swing
- Generated detailed requirements specifications and use cases, featuring a variety of forms and input fields developed using Java Swing that allowed users to easily manage and update adoption and foster care records.
- Presented 7+ interactive dashboards using PowerBI and Tableau to showcase critical data, including the number of adopted children and the availability of children in foster care, all classified by year and geographic area.

Weather Data Web Application

- Engineered a Flask-based web application using Python, developing APIs that retrieve and present real-time weather data from the OpenWeather API, processing over 500 API requests per day and demonstrating advanced Python coding skills.
- Deployed and managed the application on AWS utilizing EC2 for scalable compute resources and Elastic Beanstalk for automated deployment and scaling, ensuring high availability and reliable performance.
- Configured and provisioned AWS infrastructure with Terraform, including Security Groups, EC2 instances, Elastic Beanstalk environments, and CodePipeline, optimizing resource management and scalability.
- Streamlined infrastructure automation with Ansible, reducing manual configuration efforts by 70% and facilitating consistent and efficient deployment of the application environment.
