

Bala Sai Ganesh Chintala

(989) 621-4541 | bsgchintala@gmail.com

Objective

Enthusiastic about leveraging strong analytical and data visualization skills capabilities to enhance business intelligence and implement data-driven strategies. Aiming to optimize performance and decision-making processes in a fast-paced and evolving business environment.

Education

Master of Science in Information Systems

Central Michigan University, GPA: 3.8

Bachelor of Science in Electronics and Communication Engineering

R.V.R. & J.C. College of Engineering

Emphasis on SQL, C#, Python, LabVIEW, AutoCAD

National Service Scheme (NSS) Volunteer Member

Certifications

- Snowflake Snow Pro Core
- Tableau Desktop Specialist
- AWS Certified Data Engineer - Associate
- Google Cloud Data Analytics
- Microsoft Azure AZ - 900
- Advanced SQL

Technical Skills

- **Data Tools:** Power BI, Tableau, AWS (Lambda, S3, SNS, SQS, Glue, Firehose)
- **Technical Languages:** Python, SQL
- **Database Management:** Oracle, Snowflake, MySQL Workbench, SQL Server
- **Data Integration:** API data gathering, Snowflake Data warehousing, RESTful APIs
- **Other Technologies:** Advanced Excel, Tableau Prep Builder, Jira

Professional Experience

Community School of the Arts Foundation

AWS Database Intern

06/2024 – Present

Technologies Used: AWS, Python (Flask, FastAPI), RESTful APIs, Dialogflow, Watsonx.ai

- Developed an AI-powered chatbot integrated with Canvas LMS, leveraging data made available through ETL pipelines to ensure real-time access to LMS data.
- Integrated the chatbot backend with Canvas API, utilizing data pipelines built with AWS services to provide reliable and consistent access to data.
- Designed and implemented role-specific conversational workflows to deliver personalized interactions, improving user experience and satisfaction.
- Implemented role-based NLU models that are continuously refined based on real-time data extracted and transformed using AWS Glue, improving response accuracy and personalization.
- Designed backend workflows using Python (Flask, FastAPI) to process real-time data sourced from AWS ETL processes, enabling seamless interactions with the LMS through the chatbot.
- Automated data transformation and loading processes with AWS Glue to ensure that data accessed by the chatbot remains accurate and up to date, enhancing the chatbot's response reliability.
- Monitored and optimized data workflows with AWS CloudWatch to ensure the stability of ETL processes, directly supporting the chatbot's performance and interaction quality by reducing latency and errors.
- Created detailed technical documentation outlining system architecture, API integrations, and conversational workflows, ensuring clarity and ease of knowledge transfer across teams.

Central Michigan University, Workforce Management System

Student Assistant

08/2023 – Present

Technologies Used: AWS, Snowflake, Tableau Prep Builder, Power BI, Jira

- Utilized Python libraries to perform data manipulation, mapping, cleansing, and feature engineering. Developed and analyzed datasets using Python.
- Utilized AWS Lambda to extract data from external APIs, developed ETL scripts in AWS Glue to process large datasets across various databases, and implemented SNS and SQS for notification integration, ensuring seamless maintenance of ETL pipelines.
- Collaborate with data architects, modelers, and IT team members on project goals, creating an effective data-driven environment for the business.
- Created SQL queries and ETL processes to load data into Snowflake, facilitating comprehensive data analysis and reporting.
- Conducted debugging of Snowflake mappings, along with testing of stored procedures and functions, performance, and unit testing.
- Implemented Tableau reports that highlight critical trends and insights to enable data-driven business decisions.
- Automated the scheduling and distribution of Tableau reports, ensuring that key stakeholders receive up-to-date information without manual intervention.
- Documented system configurations, processes, and workflows, providing clear guidelines for future reference and training.

Max Life Insurance

Data Engineer

05/2022 – 06/2023

Technologies Used: Python, Excel, SQL

- Executed SQL queries via stored procedures and leveraged parallel processing for data extraction, improving records management and reducing report generation time by 20%.
- Contributed to the compilation and cleansing of large datasets using Python Pandas for clinical research purposes.
- Utilized Excel for data validation, aggregation, and pivot table creation to support key business analytics projects.
- Optimized Excel workbooks by automating repetitive tasks using Python, improving productivity and reducing manual effort.
- Collaborated with cross-functional teams to optimize data pipelines, using Excel for initial data validation and Python for automation and scalability.
- Performed data reconciliation and validation between Excel spreadsheets and Python outputs to ensure consistency and accuracy in reporting.

Professional Summary

A Software Engineer with a passion for transforming complex business operations into user-friendly digital systems. Proficient in enabling data-driven business decisions to elevate operational efficiency. Committed to continuous technological advancement to provide innovative, actionable insights.
