SUMMARY

Data Analyst with 3+ years of professional experience across **supply chain analytics**, **financial services**, and energy operations, backed by a Master of Applied Computer Science from Southeast Missouri State University (Dec 2025).

Core stack: **SQL** (window functions, CTEs), **Python** (pandas, NumPy, scikit-learn), **Power BI** (DAX), **Tableau**, **R**, **SAP**, and **Snowflake**, applied to **demand forecasting**, **procurement analytics**, **ETL/ELT pipeline** development, and **business intelligence** reporting. Designed **dashboards** and **data pipelines** used by 25+ stakeholders at JPMorgan Chase, Wipro, and Adani Group, covering **supplier performance**, **inventory optimization**, financial reporting, and operational KPIs. Structured and analyzed 280,000+ records for **cost variance analysis**, **supply chain KPI** reporting, and **regulatory reporting** workflows across US and global enterprise environments.

TECHNICAL SKILLS

SQL & Data Warehouses: SQL (window functions, CTEs, stored procedures, query optimization), Snowflake, Google BigQuery, Amazon Redshift, Databricks, Azure Synapse Analytics, PostgreSQL, MySQL

Languages: Python (pandas, NumPy, scikit-learn, matplotlib, Seaborn), R (tidyverse, ggplot2), Bash

Visualization & BI: Power BI (DAX, Power Query), Tableau, Looker, Microsoft Excel (pivot tables, Power Query, Power Pivot), Google Data Studio

Data Engineering & Pipelines: dbt (data build tool), Apache Airflow, Apache Spark (PySpark), ETL/ELT pipelines, AWS Glue, Fivetran, dimensional modeling

Supply Chain & Operations: demand forecasting, inventory optimization, procurement analytics, supplier performance management, S&OP (Sales and Operations Planning), supply chain visibility, lead time analysis, on-time delivery (OTD), fill rate analysis, vendor scorecards, purchase order management, SAP (MM, SD modules), ERP systems, supply chain KPIs

Statistical & Analytical Methods: A/B testing, hypothesis testing, regression analysis, cohort analysis, funnel analysis, segmentation, predictive modeling, time series forecasting, statistical significance

Cloud & Practices: Amazon Web Services (AWS) (S3, Glue, Redshift, Lambda), Google Cloud Platform (GCP) (BigQuery, Dataflow), Microsoft Azure (Data Factory, Synapse Analytics), data governance, data quality, data lineage, self-service analytics, cross-functional collaboration, Git, JIRA, Confluence, Agile

EXPERIENCE

JPMorgan Chase

Feb 2026 - Present

Data Analyst

St Louis, MO

- Built **Power BI** dashboards (DAX, Power Query) tracking credit risk, trade activity, and **KPI** metrics across 3 business lines, replacing 4 manual Excel reports and saving the analytics team 10 hours of preparation time each week
- Wrote **advanced SQL** queries using window functions and CTEs against an enterprise **data warehouse** covering 500,000+ daily transaction records, producing structured **regulatory reporting** packages reviewed by senior leadership each quarter
- Automated **ETL pipelines** in **Python** (pandas, NumPy) to extract, validate, and load transaction data for 5 recurring compliance reports, cutting analyst preparation time from 3 days to under 1 day per reporting cycle
- Ran **root cause analysis** and **data quality** audits across 4 upstream source systems, resolving 200+ data discrepancies flagged during monthly reconciliation and improving accuracy for downstream **business intelligence** consumers
- Delivered **ad hoc financial analysis** on portfolio exposure and transaction anomaly patterns to business leads within 48 hours of each request, supporting faster decision-making for 2 trading desk teams
- Collaborated with **cross-functional** risk, compliance, and technology teams to define **data governance** standards and document **data lineage** across 3 reporting domains, reducing source-to-report ambiguity for 15+ analyst users

Wipro Limited

May 2022 - Dec 2023

Data Analyst, Supply Chain

United States

- Analyzed 150,000+ purchase order records across 12 vendor categories using **SQL** and **Excel** for **supplier performance management** at a Fortune 500 manufacturing client, surfacing 3 underperforming contracts flagged for renegotiation
- Designed and deployed **Power BI** dashboards tracking **on-time delivery (OTD)** rates, **fill rates**, lead times, and order cycle times for 8 regional operations managers, replacing 3 legacy Excel reports used in weekly **S&OP** reviews
- Built **demand forecasting** models in **Python** and **R** on historical order and procurement data across 3 client warehouses, delivering **inventory optimization** inputs that reduced average overstock by 2 weeks of supply
- Extracted and restructured **SAP** (MM module) **procurement analytics** datasets to surface demand and lead time fluctuations, providing weekly **supply chain visibility** reports reviewed during **S&OP** planning cycles
- Developed **Python** automation scripts for monthly **data extraction** from flat files and relational databases, cutting preparation time from 3 days to under 8 hours and freeing analysts for higher-value **predictive modeling** work
- Standardized **vendor scorecard** reporting in **Excel** and **Power BI** across 5 regional procurement offices, consolidating **supply chain KPI** metrics into a single monthly format referenced in client leadership reviews

Adani Group

May 2021 - May 2022

Data Analyst

India

- Produced daily operational **dashboards** in **Power BI** and **Excel** tracking production output, materials consumption, equipment utilization, and maintenance costs across 5 energy business units for plant operations staff
- Constructed **cost variance** and procurement cost models in **R** and Excel for 3 energy generation facilities, identifying month-over-month cost overruns and delivering trend summaries used in quarterly senior management meetings
- Queried **SQL** operational and **ERP** databases to compile production metrics, materials usage, and maintenance records supporting daily and weekly **supply chain KPI reporting** across 3 plant locations
- Executed **data quality** audits across 3 operational source systems, resolving missing and inconsistent records and reducing the error rate in quarterly reports submitted to senior leadership

PROJECTS

Operational Performance Reporting & Analytics | *Power BI, SQL, Python, Excel*

- Built **Power BI dashboards** and scheduled reports by querying 250,000+ records from multiple data sources, supporting weekly and monthly **business intelligence** and **supply chain KPI** reviews for 25+ business users
- Designed and maintained **ETL pipelines** using **SQL** and **Python** (pandas) to prepare **analysis-ready datasets** for 9 recurring reporting jobs refreshed on daily and weekly cycles, reducing manual data prep time by 6 hours per week

Cost, Trend, and Data Quality Analysis | *SAP, R, Excel, SQL*

- Organized 280,000+ records from **SAP** exports and internal spreadsheets into structured tables, building **reporting pipelines** that standardized financial and operational data across 3 source systems
- Evaluated month-over-month **cost variance** and **procurement cost** patterns using **R** and **Excel**, producing **variance analysis** and trend summaries referenced during recurring management review meetings

EDUCATION

Southeast Missouri State University

Master of Applied Computer Science

Cape Girardeau, MO

Dec 2025
