PROFESSIONAL SUMMARY:

A certified **ETL Developer** with over 4 years of professional experience working with big data technologies like **Apache Spark, Mongo DB, Tableau** with the cloud platforms such as **Azure, AWS. Microsoft Certified Associate, Python Developer, ETL Developer**, worked on **Azure Data bricks** for data processing, Scheduling and visualizations.

- ❖ Proficient with Azure services, such as **Azure Blob Storage, Azure Database, Azure Data Factory, Azure Synapse Analytics, Azure Cosmos DB, Azure Monitor, Azure Active Directory, Virtual Machines, Azure Database, Azure Data Lake Analytics.**
- ❖ Expertise in **ETL pipelines** which were created in **Azure Data Factory** to transfer data from on-premises to **Azure SQL Datawarehouse**. Worked with **MySQL, PostgreSQL** and **MongoDB** for large scale applications and for storing structured and unstructured data.
- ❖ Familiar with the **Hadoop** distribution and its parts which include **HDFS, MapReduce, MySQL, Sqoop, Hive, and Kafka.**
- ❖ Solid understanding of **NoSQL** databases, including **Dynamo DB, Cosmo DB, Mongo DB, Cassandra, and HBase**, and their integration.
- ❖ Expertise in **AWS** services including **S3, EC2, SNS, RDS, EMR, Kinesis, Lambda, Step Functions, Glue, Redshift, DynamoDB, Elasticsearch, Service Catalog, CloudWatch** and **IAM**.
- ❖ Expertise in handling data manipulation and numerical calculations using Python packages like **Pandas** and **NumPy**.
- ❖ Worked with **Tableau** and **PowerBI** for data analysis, and worked on **Azure Databricks** for Data processing, scheduling and management and visualizations.
- ❖ Experience with version control systems like **Git, GitHub** to keep track of every modification in the **database**. Familiar with building and utilizing **data frames**, as well as with using **Apache Spark** for large scale data processing.
- ❖ Developed complex **SQL queries**, stored procedures, functions, packages, tables, views, and triggers for various kinds of relational databases, including **MS SQL Server, Oracle, DB2, MySQL, and PostgreSQL**.
- ❖ Expertise in performing numerical calculations and data wrangling using **Python** programs like **Pandas** and **NumPy**, worked on multiple scripts and designed the database using **ERD**, allowing for data visualization at each step.
- ❖ Expertise in using **spark-SQL** with a variety of data sources, including **JSON, Parquet**, and commonly used **Spark Data Frames API** over **Cloudera** platform for performing analytics on **Hive data**.
- ❖ Expertise in using **Azure Stream Analytics** for instant data processing and analysis, as well as **Azure Data Lake Storage** for extensive data processing and storage.
- ❖ Expertise in data modeling with **Star, Snowflake, Data, and Transactional** schemas.
- ❖ Expertise in working with **MySQL, POSTGRE SQL** and **Non-RDBMS** like **Mongo DB**. I also worked with **Cloud Era** for faster and easier data management and data analytics for data anywhere.
- ❖ Worked with **Azure Dashboard** for creating dashboards and **OLAP** tools like **Kyvos** and **Druid** for real-time data analysis.
- ❖ Worked with **SSAS (SQL Server Analysis Services)** for complex **data modeling** and analysis to improve BI capabilities.
- ❖ Proficiency in implementing relational databases from Java programs using **ORM (Object-Relational Mapping)** frameworks like **Hibernate** and **JDBC (Java Database Connectivity)**.
- ❖ Worked with **QuickSight** to provide business intelligence reports and powerful **data visualizations** for data-driven decision-making. Expertise in **Amazon QuickSight** with various data sources, which includes **Amazon RDS, Aurora, Redshift, and S3**.
- ❖ Worked with **Pandas** for generating reports based on dashboards

TECHNICAL SKILLS:

AWS Services	Amazon EC2, S3, Simple DB, MQ, ECS, Lambdas, Sage maker, RDS, Elastic Load Balancing, SQS, Identity and access management, Cloud Watch, EBS and CloudFormation.
Azure	Azure Data Lake, Data factory, Databricks, SQL database, SQL Datawarehouse, Functions, Synapse, Blob Storage, Event Hub.
Big data Technologies	Spark, Hadoop, HDFS, Hive, Sqoop, MapReduce, Kafka, Kinesis, Zookeeper, HBase, Apache Spark.
Hadoop Distributions	Hortonworks, Cloudera
Relational Databases	MySQL, Oracle, Microsoft SQL Server, PostgreSQL
NoSQL Databases	Mongo DB, Cassandra, Dynamo DB, Cosmo DB
Programming languages and tools	Python, R, Scala, UNIX, PySpark, Spark SQL
BI Tools	Power BI, Tableau
Cloud Technologies	Databricks, AWS, Azure, Snowflake
CI/CD tools	Git, Jenkins, Azure DevOps
Build and CI Tools	Docker, Kubernetes, Jenkins

Client: South Jersey gas

Role: ETL Developer

Location: New Jersey, US

Year: August 2022 – Till date

Responsibilities:

- ❖ Configured **Hadoop** and Spark on **Amazon EMR** clusters for handling data in a distributed manner, which enables the processing of large amounts of data.
- ❖ Implemented **PySpark** scripts to process and transform data **from Amazon S3 (Simple Storage Service) and HDFS (Hadoop Distributed File System)**, for data processing tasks mainly carried out in big data environments.
- ❖ Worked on carrying data transformation, aggregation, and cleaning tasks which are essential in getting raw data for additional processing or analysis.
- ❖ Automated **ETL (Extract, Transform, Load)** workflows, coordinating Spark jobs, and managing dependencies are essential activities in large-scale data processing environments. These processes are made easier by **Amazon Web Services (AWS)** through its automated ETL service, **AWS Glue**.
- ❖ Worked with IBM DataStage, an **extract, transform, and load (ETL)** tool for integrating, transforming, and loading data on several platforms and systems.
- ❖ Worked on **MapReduce**, a framework which combines distributed computing, parallel processing, and **Hadoop integration**. Used to analyze and generate big datasets in parallel across a distributed cluster of computers.
- ❖ Worked on real-time data processing using **Apache Spark Streaming**, which includes ingesting and analyzing continuous streams of data in real-time.
- ❖ Worked on using **AWS Lambda** functions to automate the process of loading data into **Amazon S3** (Simple Storage Service), which offers a serverless and scalable way of handling data storage activities.
- ❖ Worked with tools, platforms, and techniques designed for managing large-scale datasets which is necessary when integrating big data technology to handle large scale data sets effectively.

- ❖ Worked with big data technologies to handle large volumes of data in an effective manner, which enables reliable processing and analysis of data at scale. Used **Hadoop** and **Apache Spark**, distributed computing frameworks, to parallelize data processing jobs across machine clusters, maximizing scalability and performance.
- ❖ Worked with **data integration** strategies and **ETL (Extract, Transform, Load)** tools to ingest and integrate data from cloud storage and on-premises systems with ease.
- ❖ Worked on big data platforms combined with machine learning and artificial intelligence frameworks (such as **TensorFlow** and **PyTorch**) for conducting complex analyses and extracting insights from large datasets.
- ❖ Configured batch intervals and processing logic to effectively handle micro-batches of streaming data. Spark Streaming apps were implemented to monitor specified S3 locations for incoming data files or objects.
- ❖ Worked with **Redshift** to perform analytical query processing by effectively storing and analyzing large volumes of structured data.
- ❖ Worked with Applied Python to carry out complex **data transformations**, implementing unique functions and algorithms to meet specific requirements for processing that went beyond Spark's capabilities.
- ❖ Worked on python for processing tasks that Spark could not provide natively. Its many libraries and adaptability allowed for effective **data manipulation** and analysis.
- ❖ Designed and implemented **Extract, Transform, Load (ETL)** workflows with Informatica to effectively pull data from several sources, modify it as needed which meets business needs, and import it into **Redshift** data warehouse for reporting and analysis.
- ❖ For optimizing data processing and storage in distributed contexts, designed **data partitioning** and distribution strategies. Worked on partitioning strategies to balance data distribution to avoid hotspots and guarantee workload distribution by horizontally dividing data among nodes for **parallel processing**.
- ❖ Worked on developing and implementing **MapReduce** projects to effectively process massive amounts of unprocessed data. worked on the **MapReduce** programming model, which takes advantage of the **Hadoop** ecosystem's scalability and fault tolerance to parallelize data processing jobs across distributed computing clusters.
- ❖ Worked with **Spark SQL** and Python scripts to apply complex transformations and business logic to big datasets using **Amazon EMR (Elastic MapReduce)**.

Client: Charter Communications

Location: Fortworth, Texas

Role: Python Developer

Year: Feb 2021 – June 2022

Responsibilities

- ❖ Created and put into use **Django** models, views, and templates to handle application data and generate dynamic webpages while maintaining data security, and integrity.
- ❖ By Using the **TensorFlow** and **Keras** framework, deep learning models were trained to address classification, regression, and sequence prediction issues which includes text analysis, image recognition, and time series forecasting.
- ❖ Designed and developed **HTML5**, **CSS3**, and **JavaScript** frameworks/libraries like Foundation, Material Design, **Bootstrap** to create responsive user interfaces for web applications.
- ❖ Worked with Plotly.js and **Chart.js** for creating interactive, responsive graphs and charts which let users see relationships, trends, and patterns in data sets using tooltips and dynamic filtering.
- ❖ Developed visualizations using **Matplotlib** to analyze and share insights from both organized and unstructured data sources, such as Excel spreadsheets, **CSV files**, **SQL databases**, and **JSON/XML** data formats.
- ❖ Deployed machine learning models with the **Flask** framework that expose the capabilities of predictive analytics as **RESTful APIs**, allowing real-time inference to be integrated with online and mobile apps.
- ❖ Worked with **OpenCV** for creating unique image acquisition pipelines and processing workflows for offline and real-time applications, as well as to capture frames from webcams, video streams, image files.
- ❖ Implemented **pandas** to extract insights and patterns from structured and unstructured datasets by data manipulation and analysis which includes cleaning, filtering, aggregation, and visualization.
- ❖ Set up static and interactive visualizations of traffic flow, vehicle counts, congestion levels which are derived from data analysis using Python scripts and **Jupyter Notebooks** with **Matplotlib**, **Seaborn**.
