Professional Summary

Senior Java Full Stack Developer with 3+ years of hands-on engineering experience delivering enterprise-scale, high-performance applications using Java, J2EE, Spring Boot, REST APIs, Microservices, Angular, and modern CI/CD pipelines. Extensive experience building secure distributed systems, architecting service layers, optimizing SQL queries, and developing responsive client-side applications using Angular (latest), TypeScript, JavaScript, HTML5, and CSS3. Strong background collaborating with cross-functional teams in Agile environments and leading end-to-end solution delivery with an emphasis on scalability, performance, and clean, maintainable code.

Technical Skills

Backend: Java, J2EE, Spring Boot, Spring MVC, REST APIs, Microservices, JWT, JPA/Hibernate
Frontend: Angular (v12+), TypeScript, JavaScript (ES6+), HTML5, CSS3, RxJS, Angular Material
Databases: SQL Server, PostgreSQL, MySQL, Complex Queries, Stored Procedures, Query Optimization
DevOps: Git, GitHub Actions, Jenkins, CI/CD, Docker, Linux
Architecture: Microservices, Distributed Systems, Domain-Driven Design, Layered Architecture
Other: Agile/Scrum, TDD, Code Reviews, Performance Engineering

Professional Experience

American Express	Jan 2025 – Present
<i>Senior Java Full Stack Developer</i>	United States

- Designed and implemented Spring Boot microservices handling high-volume transactional workflows.
- Developed Angular front-end modules using TypeScript, RxJS, and Angular Material, ensuring responsive UX.
- Built REST APIs with Spring Boot for secure and scalable communication across distributed services.
- Optimized SQL queries and database schemas, improving critical query performance by 40%.
- Refactored monolithic services into microservices to improve scalability and maintainability.
- Integrated CI/CD pipelines using GitHub Actions and Jenkins for automated builds and deployments.
- Performed code reviews focusing on Java, Angular, and SQL best practices and security compliance.
- Collaborated with QA, DevOps, and Product teams to deliver features across Agile sprints.
- Enhanced system performance through JVM tuning, caching strategies, and asynchronous processing.
- Built reusable Angular components and front-end architecture standards improving development efficiency.

Capgemini	Dec 2020 – Dec 2023
<i>Full Stack Developer</i>	Bangalore, India

- Developed enterprise-grade applications using Java, Spring Boot, Angular, and TypeScript.
- Built RESTful microservices with Spring Boot and integrated them with multi-tier architectures.
- Implemented Angular components, directives, and services adhering to MVC and modular architecture.
- Designed SQL procedures, complex joins, indexing strategies, and optimized database performance across environments.
- Automated CI/CD workflows enabling consistent multi-environment deployments.
- Led sprint planning, backlog refinement, and Agile ceremonies for cross-functional teams.
- Created reusable UI components and Angular services reducing code duplication by 30%.

- Rewrote legacy Java modules to modern Spring Boot microservices, improving performance and maintainability.
- Collaborated with UX teams to implement pixel-perfect front-end features with clean HTML/CSS.
- Delivered production support, debugging Java stack traces, SQL query issues, and Angular UI failures.

Education

Master of Science – Computer Science

University of Central Missouri, USA

Bachelor of Technology – Computer Science & Engineering

KHIT, Andhra Pradesh, India

Certifications

- Oracle Certified Java SE Programmer
- Spring Professional Certification
- AWS Certified Developer – Associate

Core Competencies

Full Stack Java Development | Angular Architecture | Microservices Design | REST API Engineering | SQL Optimization | CI/CD Automation | Performance Tuning | Agile Delivery | Code Quality | End-to-End Solution Ownership
