Professional Summary

- 4+ years of experience as a **Java/J2EE** Developer in all phases of Software Development Life Cycle (SDLC) including analysis, design, implementation, integration, testing and maintenance of applications using Java/J2EE and Object - Oriented Client-Server technologies.
- Extensive experience in using **J2EE** related technologies including **JDBC, JSP, Servlets, JMS** and knowledge of multiple technologies including **Java, J2EE, XML, RDBMS, SQL and PL/SQL**.
- Hands on Experience on developing User Interface Using **HTML, CSS3, Bootstrap, Javascript, Angular, React**.
- Working Experience in different modules of Spring Application Framework (**Spring Core, Spring Data, Spring JDBC, Spring Hibernate, Spring MVC, Spring AOP, Spring REST**).
- Strong in using **MVC** Frameworks in the development of the web application.
- Experience in writing complex Database Queries, Stored Procedures, Triggers, and Cursors.
- Experience with various **J2EE** design patterns like **DTO, DAO, MVC, Singleton and View Object** in the development of Enterprise Applications.
- Proficient in programming by using the IDE's such as **Eclipse, My Eclipse, IntelliJ**.
- Experienced in developing Microservices with **Spring Boot, Spring REST, Eureka, API – Gateway**.
- Experienced in developing **Spring security, JWT and OAuth 2.0** based authentication
- Experience in database development and implementation using different **RDBMS like MySQL 5.5 and Oracle**.
- Experience in working with **Git & GITHUB** for version control
- Implemented **REST** Services using Spring Boot to interact with **Service Layer, and DAO layer API** and return response in **JSON** Format.
- Experience in using various **Amazon Web Services (AWS)** Components like **EC2 and S3**.
- Proficient with container systems like **Docker** and **container orchestration like EC2 Container Service**.
- Proficient in deploying and configuring multi-tier, clustered enterprise applications on web/application servers such as **JBOSS and Tomcat**.
- Used **Agile** methodology in developing the application, which includes iterative application development, 2 week-sprints, daily stand-up meetings, Sprint Planning, and customer reporting backlogs(bugs).
- A quick learner and self-starter possessing initiative spirit at various levels and a team player with good communication, demonstrational and managerial skills for analyzing user requirements and ensuring functionality, excellent interpersonal abilities & maximum contribution to attain the team goal.

Education: Bachelor's in Computer Science

Tribhuvan University, Kathmandu, Nepal (December 2018)

Technical Skills:

Java/J2EE Technologies	Servlets, JSP, JDBC, JMS, SpringBoot, Spring MVC, Spring Security, Spring AOP
Programming Languages	Java, C++, JavaScript, SQL
Application/Web Servers:	IBM WebSphere, JBoss and Tomcat
Frameworks	Spring 4.x/5.x, Hibernate 4.x/3.x
IDEs	Eclipse 3.x, IntelliJ IDEA, STS
Web technologies	JSP, JavaScript, jQuery, AJAX, XML, XSLT, HTML, CSS, HTML5
Web Services	Soap, RESTful
Methodologies	Agile, Waterfall, TDD/BDD
Modeling Tools	UML, Visio, Draw.io
Testing technologies/tools	JUnit, Mockito, Jasmine, POSTMAN
Database Servers	Oracle 8i/9i/10g, DB2, SQL Server 2000/2005/2008, MySQL
Version Control	GIT, BitBucket
Build Tools	Maven, Gradle
Platforms	Windows, UNIX, Linux

Professional Experience:

Client: Bank Of America, Charlotte , NC

Date: May 2021 to present

Role: Java Developer

Responsibilities:

- Involved in analysis, specification, design, and implementation and testing phases of Software Development Life Cycle SDLC.
- Actively interacted with Business Analysts for requirement gatherings and analysis. Involved in different **Scrum meetings, grooming sessions, and sprint planning.**
- Developed the Presentation and Controller layers using **React, and used JavaScript libraries, HTML, CSS**, Business logic using Spring **IOC, AOP, DTO**, and Persistent layer **DAO, JPA Hibernate** for all modules. Worked with tech manager and business analyst on standing up azure DevOps sprint board
- Worked with azure DevOps team on creating vertical teams and projects and validating teams permissions
- Implemented azure-pipelines.yml file for services CI/CD pipeline

- Troubleshoot pipeline files when agent server wasn't automatically deploying config and application war file for apps
- Developed the application using different industry standard design patterns like **MVC, Singleton, DAO, DTO, Iterator and Factory Pattern** etc for re-usability.
- Used **MySQL** database for SQL, PL/SQL scripts, stored procedures, functions, triggers.
- Manipulated data using **CRUD** operations of **MySQL** database management system and handled database access and data transmission based on **RESTful** web service.
- Developed Spring Boot **REST Microservices, Dockerized Containers** and deployed into **AWS EC2** instances.
- Worked on **JMS** (Java mail sender) service to generate automated emails throughout the applications and used Freemarker template language (**FTL**) to generate email templates.
- Worked on **SL4J** to validate functionalities and JUnit for unit testing
- Used **Hibernate**, Object Relational Mapping (**ORM**) solution, technique of mapping data representation from **MVC** model to **MySQL Relational data model**.
- Hands-on experience in building **API** using Java core concepts- Object oriented Programming, **Multithreading, Exceptional Handling, Collections Framework**.
- Good understanding of version control software like **GIT**, progress tracking software like **JIRA** and Continuous Integration and Development (CI/CD) tools like **Jenkins**.
- Used props, states, keys, refs in **React.js** to build the **UI components**.
- Used **React-router** to route the pages on the client-side and built **Single Page Application (SPA)**
- Used **Middleware, Redux-Promise** in application to retrieve data from Back-End and to also perform **RESTFUL** services.
- Good understanding of deploying **Docker** contained **Spring Boot Microservices** into **AWS EC2** container service using **AWS** admin console and used **lambda** to run applications in **AWS console**.

Environment:

J2EE, Java 1.8, Spring Boot, Microservices, API Gateway, REST API, SL4J, POSTMAN, Hibernate ORM, JSON, Maven, GitHub, Junit, MySQL, DB2, Jenkins, Swagger, AWS EC2, JIRA, HTML, CSS, REACT

Client: TransUnion, Chicago, IL

Date: Feb 2019 to Apr 2021

Role: Java Developer

Responsibilities:

- Worked with a team of developers to modify the existing traditional web-based application.
- Actively participated in requirements **gathering, analysis, design, and testing phases**.
- Worked with **Agile** Methodologies and followed **Scrum** approach for the development process.
- Interact with Architects and business to translate product requirements to technology solutions.
- Extensively worked with core java like **collections, String Builder, and interfaces**.
- Implemented Spring **MVC Dependency Injection** for integrating various **Java Components**.
- Developed views and controllers for client and manager modules using **Spring MVC** and **Spring Core**.
- Developed the **RESTful** web services using **Spring MVC**.
- Designed and developed the **UI** using **HTML5, CSS3, ReactJS, jQuery, AJAX, Bootstrap, JavaScript, and Typescript**.

- Implemented **OAuth** 2.0 based authentication for microservices communication.
- Develop **SOAP** and Restful web services using **JAX-WS** and **JAX-RS** technologies
- Implemented **REST Services** using **Spring Boot** to interact with **Service Layer**, and **DAO** layer **API** and return response in **JSON** Format.
- Implement cross cutting concerns like **logging**, **security**, and **transaction** management across all the modules of the applications.
- Implemented **React Routes** to enable navigation from one component to another.
- Develop user interfaces for internet applications with front-end technologies using **ReactJS (routes, models, components, controllers, templates)**, **jQuery**, **JavaScript**, **HTML**, **CSS**.
- Used **Spring Config** server for centralized configuration and Splunk for centralized logging.
- Involved in installation & configuration of Jenkins pipeline to support various java builds and **Jenkins** plugins to automate continuous delivery of framework using **Maven** on multiple environments.
- Provided support for troubleshooting and resolving production issues during releases and post releases.
- Responsible for storing and maintaining the **Java** source code at Comcast **GitHub** Repository.
- Work Closely with the Quality Assurance team to ensure delivery of high quality and reliable Web and Micro Service Application together.
- Coordinate with the Operation Support team for Production Deployment.
- Providing daily status in scrum meetings with the client.

Environment: Java 1.8, Spring Boot Micro services, Spring REST framework, Spring Batch, Spring JPA, Spring MVC, Spring JDBC, IOC, AOP, Jackson JSON/XML, React JS, Bootstrap, Jenkins, Docker, Junit, Mockito, Bitbucket, Git, JIRA, Eclipse, Maven.

May 2018 – Dec 2018

BLUE CROSS HOSPITAL, Kathmandu Nepal

APPLICATION DEVELOPMENT INTERN

Blue Cross is a retail registry system originally based in Kathmandu Nepal with the goal to venture more towards patient health. One of its major clients was KTM Valley. I was involved with their modern Health Care System project called My Care System. This project included modules like Medicine Schedules and Insurance module which automatically sends the information of patient medical details, and the insurance company details to My Care System. And other modules included the management of Patient's details, the management of Doctor's details and personalization options for patients.

- Understanding functional specifications, designing, and developing creative solutions to meet business requirements.
- Designed the Architecture of the project as per MVC standards.
- Used proprietary framework for the development of the module
- Designed UI interfaces web pages using Adobe illustrator and XD, implemented design for a My Care Butler.
- Developed UI Screens in JSP, HTML, Java Script, XML and CSS
- Unit Testing, Integration Testing, Bug Fixing.

Environment: Windows 2000/XP, Unix, Java, J2EE, JSP, Servlets, J2EE JSP, Servlet, JDBC, Angular, MVC Framework, HTML, JavaScript, CSS, SQL, Oracle, Tomcat.
