Motivated, teamwork-oriented, and innovative Software Engineer with a BS in Petroleum Engineering. My expertise lies in executing full lifecycle software development, backed by extensive experience in software engineering principles, data analysis, and system integration. With a solid grounding in statistics, mathematics, and analytics, I am enthusiastic about collaborating with peers to deliver impactful technological solutions. My tenure as a Python Developer has sharpened my skills in system design, implementation, and problem-solving. Having actively contributed to various stages of the software development life cycle, I bring a holistic understanding of requirements gathering, architectural design, testing, and debugging.

Technical Skills

Languages and Technologies: Python, R, JSON, geoJSON, HTML, CSS, JavaScript, API Interactions, Data Mining, Social Media Mining, Machine Learning, Django, Angular

Libraries: Python (Pandas, NumPy, Matplotlib, SQLAlchemy, Flask Application, Plotly, BeautifulSoup, Selenium), JavaScript/Web (Bootstrap, D3.js, Geomapping with Leaflet.js, IfVisible.js, Plotly.js)

Development Tools and IDEs: Visual Studio Code, Jupyter Notebook

Database Technologies: SQL, MySQL, SQLite, MongoDB, ETL Processing, Big Data Analytics with Hadoop

Operating Systems: Windows 11, Linux

Tools: Microsoft Excel (Pivot Tables, VBA Scripting, Modeling, Forecasting), Tableau, Heroku, GitHub, Power BI, Essbase

Education

Rice University (Houston, TX) August 2019

Data Analytics Boot Camp

University of Houston (Houston, TX) December 2017

Bachelor of Science in Petroleum Engineering

Experience

Software Engineer

Wells Fargo

November 2021 – November 2023

- As a Software Engineer, played a key role in supporting Agile cycles aligned with vendor applications on ServiceNow. Responsibilities included developing an integration platform for forecasting, evaluating, analyzing, and preparing models for onboarding into Wells Fargo's custom platform using tools such as Excel, VBA, and Python. Demonstrated proficiency in writing custom ETL functions to retrieve and manipulate data, employing Pandas and NumPy for efficient data processing.
- Created queries to store, fetch, and inspect data and logs using SQL and PuTTY. Actively participated in building, troubleshooting, and iterating APIs using tools like Postman. Role extended to the overall development, design, and implementation of new or modified software products. Engaged in the full development life cycle, from requirements analysis and design to testing and debugging.
- Collaborating closely with other developers, designers, business analysts, and systems analysts, contributed to the development of applications capable of processing large data volumes efficiently. Served as a technical expert, providing guidance on industry best practices, guidelines, and governance for applications and systems.
- Expertise included identifying areas for modification in existing programs, writing, and implementing efficient code, and determining operational practicality. Actively participated in software design

meetings, analyzed user needs to determine technical requirements, and conducted benefit analyses for IT solutions.

- Conducted research, designed, implemented, and managed software programs, ensuring quality outcomes and adherence to best practices. Experience also extended to testing automation, contributing to the maintenance, upgrading, and deployment of existing systems.

Data Analyst/IT Coordinator

ReMedi Health Solutions

May 2021 – November 2021

- Facilitated the seamless transfer of data from one electronic health record system to another, demonstrating expertise in data migration and ensuring the integrity and accuracy of medical records.
- Demonstrated a comprehensive understanding of healthcare data management, adhering to privacy and security protocols to maintain the confidentiality and integrity of sensitive patient information.
- Collaborated closely with IT teams and healthcare professionals to address any data-related challenges, ensuring a smooth transition during the electronic health record system transfer.
- Actively participated in quality assurance processes, conducting thorough reviews of transferred data to identify and rectify any discrepancies or inconsistencies.
- Maintained up-to-date knowledge of healthcare regulations and compliance standards, ensuring adherence to industry guidelines in handling and managing health data.
- Engaged in one-to-one collaboration with diverse healthcare professionals, fostering effective communication and understanding of their unique data needs and requirements.
- Effectively communicated complex data findings to non-technical stakeholders, bridging the gap between technical aspects and the practical application of healthcare data for improved patient care and organizational decision-making.

Data Analyst/Python Developer

Consultant/Self-Employed

November 2019 – May 2021

- Conducted comprehensive data collection from diverse sources, employing techniques such as web scraping, API integration, and database querying.
- Utilized Python scripting, particularly leveraging the Pandas library, for the extraction, transformation, and loading (ETL) of data, ensuring seamless integration and compatibility across various datasets.
- Developed static, animated, and interactive visualizations using Python scripting with the Matplotlib library, enhancing data presentation for effective communication of insights to stakeholders.
- Performed thorough testing of applications and software, identifying issues, and actively engaging in troubleshooting to ensure optimal performance and functionality.
- Demonstrated proficiency in gathering, analyzing, and interpreting data using Microsoft Excel, leveraging advanced functionalities such as pivot tables, data modeling, and statistical analysis.
- Utilized Tableau for creating dynamic and interactive dashboards, providing a user-friendly interface for stakeholders to explore and understand complex datasets.
- Collaborated with cross-functional teams to understand data requirements and implemented solutions tailored to meet specific business needs.
- Maintained a keen focus on data quality, implementing rigorous validation processes to ensure accuracy and reliability.
- Adhered to best practices in data management and privacy, ensuring compliance with industry standards and regulations throughout the data lifecycle.
