PROFESSIONAL SUMMARY

Efficiency is the heartbeat of a successful business. I focus on building scalable data systems that provide real-time insights through automation, leveraging SQL to architect clean environments and Python to build scripts that handle heavy data lifting. By implementing automated SQL views and Python scripts, I have successfully reduced data processing times by 40%.

EDUCATION

Master of Science in Applied Computer Science Columbus State University, Columbus, GA (Jan 2023 - May 2025)

TECHNICAL SKILLS

- **Data Analysis:** Python (Pandas, NumPy), SQL (Advanced PL/SQL), Web Scraping.
- **Visualization:** Power BI, Tableau
- **Databases:** SQL Server, MySQL.

DATA ANALYTICS PROJECTS

Banking Operations & Credit Analysis | Python, SQL Server, Power BI | Dec 2025 – Jan 2026

Developed an end-to-end analytics solution to monitor loan applications and credit risk. Integrated SQL Server with Python for ETL processes. Designed a dashboard to track KPIs like debt-to-income ratios, improving reporting efficiency by 40%.

Cricket World Cup: Advanced Sports Analytics | Python, BeautifulSoup, Power BI | Dec 2025 – Jan 2026

Engineered a "Best XI" selection tool using T20 World Cup data scraped via Bright Data. Performed data transformation in Pandas to benchmark player performance metrics for data-driven squad selection.

Sales Intelligence & Revenue Optimization | SQL, Tableau, Power BI | Dec 2025 – Jan 2026

Architected a data pipeline from a relational database to an interactive dashboard. Developed automated SQL views for real-time sales tracking, resulting in a 15% improvement in identifying underperforming product categories.

Streaming Service Content Strategy (Netflix) | Power BI | Dec 2025 – Jan 2026

Designed a comprehensive dashboard visualizing content distribution across 70+ countries. Analyzed trends in genres and ratings to provide acquisition recommendations.

PROFESSIONAL EXPERIENCE

Wipro | Senior Process Associate | Jan 2018 – Feb 2022

- Worked as Senior Process Associate in Waymo (way movement) process for the self-driving car being built by Google.
- Verified memory packets sent to Self-driving car (SDC). Labeled the objects for the radar navigation for SDC.
