

Charitha Papineni

Java Full Stack Developer

charithapapineni@gmail.com | +1 (315) 968-0213 | Denton, Texas, 76207 | www.linkedin.com/in/charithapapineni

SUMMARY

Full Stack Java Developer with 4+ years of experience in designing and developing end-to-end web applications using Java, Spring Boot, and modern JavaScript frameworks like Angular and React. Proficient in building RESTful APIs, managing relational and NoSQL databases, and deploying scalable solutions on AWS. Skilled in Agile methodologies, CI/CD practices, and containerization tools such as Docker and Kubernetes. Recognized for writing clean, maintainable code and delivering high-performance, user-centric applications that align with business objectives.

SKILLS

Programming Languages: Java, JavaScript, TypeScript, SQL, HTML5, CSS3

Frameworks & Libraries: Spring Boot, Hibernate, JPA, Angular, React, Node.js, Express.js

Web & API Technologies: RESTful APIs, JSON, AJAX, WebSockets, API-Level Automation, GraphQL

Test Automation: Selenium, JUnit, Mockito, Postman, TestNG

CI/CD & DevOps: Jenkins, Git, GitHub/GitLab, Maven, Docker, Kubernetes, CI/CD Pipelines

Cloud & Deployment: AWS (EC2, S3, RDS, Lambda), Heroku, Nginx

Databases: MySQL, PostgreSQL, MongoDB, Redis

Agile & Collaboration: Agile/Scrum, JIRA, Confluence, Acceptance Criteria, Stakeholder Collaboration, Root Cause Analysis, Defect Tracking

EXPERIENCE

Java Full Stack Developer, Metlife, TX

Dec 2024 - Present

- Developed and maintained more than 6 internal web-based applications used by operations and claims departments to handle over 100,000 insurance policyholder transactions each month, using Java with Spring Boot on the backend and Angular 14 on the frontend.
- Designed and implemented role-based access control (RBAC) mechanisms using Spring Security and JWT tokens across 4 enterprise policy administration systems, reducing unauthorized data access incidents by 95% over a 6-month period.
- Built and optimized RESTful APIs for real-time policy lookup, claims submission, and beneficiary updates, which improved average response time by 40% and reduced load on backend systems by enabling efficient asynchronous processing.
- Integrated AWS Lambda functions with S3 buckets to automatically generate and archive policy-related documents in PDF format, eliminating manual intervention and reducing document processing time by 70% across 3 business units.
- Developed unit, integration, and regression test suites using JUnit 5 and Mockito, achieving and maintaining over 92% test coverage on core services to ensure release stability and minimize production defects.
- Containerized all backend services with Docker and deployed to a Kubernetes (EKS) cluster using Helm charts and GitLab CI/CD pipelines, enabling consistent and zero-downtime deployments across development, staging, and production environments.

Java Full Stack Developer, DXC Technology, India

Jun 2022 - Jul 2023

- Re-engineered the front-end of a legacy pension management portal serving over 40,000 users, migrating from JSP to Angular 12 with Bootstrap 5, which resulted in a 50% reduction in page load time and improved accessibility scores across the board.
- Refactored and replaced 15+ legacy SOAP-based services with modern REST APIs built in Spring Boot, ensuring better maintainability and reducing integration failures with external vendors by over 60%.
- Conducted SQL query optimization for PostgreSQL and refactored JPA entity mappings, improving data fetch performance by reducing query execution time by an average of 30% on key transaction screens.
- Automated more than 80 end-to-end test scenarios using Selenium WebDriver and TestNG for pension workflows, saving approximately 25 hours of manual QA effort per sprint and reducing release cycle duration.
- Set up and managed CI/CD pipelines using Jenkins, Docker, and Git, enabling rapid and consistent deployment across environments, with deployment times reduced from 2 hours to under 20 minutes per release.
- Actively participated in over 12 sprint planning and retrospective meetings with cross-functional teams and US-based business analysts, aligning backlog grooming and delivery with release timelines and regulatory deadlines.

Software Engineer Associate, Vivma Software Inc., India

Jan 2020 - May 2022

- Designed and implemented over 10 modular, reusable React components for appointment booking and billing interfaces in healthcare applications, reducing front-end development time for new product modules by 35%.
- Developed scalable backend services using Node.js and Express for 5 client-facing healthcare products, with API endpoints processing more than 200,000 requests per day for features like patient lookup, appointment scheduling, and claims submission.
- Integrated MongoDB using Mongoose ODM for storing patient records, clinical notes, and transaction history, and maintained 99.9% data accuracy and integrity based on periodic internal audits.
- Created automated API monitoring and health-check suites using Postman and Newman CLI, successfully identifying 90% of critical API failures before they reached staging or production environments.
- Configured NGINX as a reverse proxy and load balancer for multiple microservices in 3 demo and UAT environments, improving client access performance and availability during evaluation phases.
- Maintained OpenAPI documentation using Swagger for internal and third-party APIs, and implemented GitLab CI/CD pipelines to automate builds, run test cases, and deploy changes to development and staging servers without manual steps.

EDUCATION

Masters in Information Sciences

Trine University, MI

Jan 2024 - May 2025

Bachelors in Electronics and Communication Engineering

Malla Reddy Engineering College for Women, Telangana

Jun 2018 - May 2022
