SUMMARY

Full Stack Developer with a proven track record of building robust, scalable, and secure web applications. Experienced in both front-end and back-end development, with a strong understanding of web standards and cloud architecture. Proficient in designing responsive UIs, implementing RESTful APIs, and integrating databases for high-performance applications. Skilled in working with event-driven systems and deploying cloud-native solutions, with a focus on optimizing performance and security. Experienced in Agile development, test-driven design, and collaborating across teams to deliver end-to-end solutions.

TECHNICAL SKILLS

Programming languages: C, JAVA, JAVASCRIPT, PYTHON, GO, SQL

Frameworks: DropWizard, SPRING BOOT, SPRING BATCH, SPRING SECURITY, HIBERNATE, PYMONGO, FASTAPI, FLASK, REAct JS, BOOTSTRAP, KAFKA

Web Development: HTML5, CSS3, THYMLEAF

J2EE Standards: JSP, SERVLETS

Databases: MYSQL, ORACLE, MONGODB

Operating System: Windows, Linux

IDE and Environment: ECLIPSE, INTELLIJ, VISUAL STUDIO CODE, POSTMAN, SQL DEVELOPER, MYSQL WORK-BENCH

Testing Tools: MOCKITO, JUNIT

AWS Services: EC2, RDS, DYNAMODB, LAMBDA, API GATEWAY, S3, CLOUD WATCH, COGNITO, CODE COMMIT

EXPERIENCE

General Motors
Software Engineer

Jan 2024 - Present
Michigan, United States

Our team developed GM's Blue Flag web app for bench booking and managing vehicle hardware tests, streamlining component testing and issue tracking. It optimizes efficiency, facilitates bench reservations, and ensures smooth communication for engineers and technicians.

Responsibilities

- Designed and implemented the client-side application using Angular, emphasizing responsive design for seamless usability across different browsers and devices.
- Developed and maintained RESTful APIs using Java Spring Boot, adhering to best practices for API design, documentation, and versioning.
- Ensured efficient data handling and processing within the application, optimizing database queries and data caching strategies.
- Managed continuous integration and continuous deployment (CI/CD) pipelines using tools like Jenkins, automating build, test, and deployment processes to achieve rapid and reliable software delivery.
- Integrated Kafka to manage real-time data streams, enabling efficient handling of messaging and event-driven architecture within the system.

Aorton INC
Software Intern

August 2023 - December 2023
North Carolina, United States

Involved in the development of the Truist loans web app, simplifying loan applications, status tracking, and account management for borrowers, advisors, and loan officers. It ensures intuitive interaction and security throughout the loan process.

Responsibilities

- Developed a full-stack web application using Angular 16 for the frontend and Go (Echo) for the backend, following the MVC pattern for service architecture.
- Developed RESTful APIs using Go (Echo) and handled database operations with Squirrel for PostgreSQL, ensuring efficient data access and management.
- Documented API endpoints with Swagger for easy integration and client consumption.
- Followed Angular and Go style guides to maintain clean, readable, and scalable code throughout the application.
- Managed back-end error handling to return meaningful errors, such as checking for duplicate usernames during user creation.
- Used Git for version control, ensuring code quality and team collaboration through branch management, pull requests and managed tasks and issues using project management tools like JIRA or GitHub Issues.

Involved in developing and designing a Web Application named "WorldCheck," a TCS internal web app for client background checks, utilizing REST-based microservices with DropWizard.

Responsibilities

- Developed an application using agile Methodology that included grooming, sprint planning, biweekly sprints, Standup meetings and Retrospective.
- Application was developed using React JS along with HTML5, CSS3, Javascript, Typescript, Bootstrap.
- Developed and implemented Restful webservice and used Spring Boot framework.
- Worked on bugfixing and supported the production application.
- In this project, We have used various Technologies and Tools like JSON, XML, JDBC, Angular, Bootstrap, DropWizard, Junit Testing, SonarQube, Github, Jenkins (CICD pipelines) following Agile methodology.
- Experienced in implementing Hibernate with database technology such as Oracle, PostgreSQL.
- Used OAuth2.0 for authentication and authorization of the application.
- Expertized in writing high quality code with full automated unit test coverage (Junit, Mockito, etc)

Designed and Implemented web application to manage the test request workflow for vehicles, enabling users to track test requests, save test results, and generate downloadable test reports. The application ensures efficient workflow management and compliance, supporting vehicle release processes.

Responsibilities

- Developed and maintained high-performance, scalable, and secure Java applications within an Agile environment.
- Utilized Core java concepts Collections, Streams, Exception Handling, Multithreading proficiently.
- Designing and deploying the project on AWS while utilizing services like Amazon EC2, Amazon RDS, and Amazon S3 for fault tolerance and high availability
- Optimized database queries and improved data access layer, resulting in the reduction of application response time.
- Actively participated in code reviews, providing constructive feedback and ensuring adherence to coding standards.
- Worked with Bitbucket, Git or equivalent code management systems with best practices.
- Using AWS API Gateway to manage and secure API endpoints and allow seamless front- and back-end system communication.

EDUCATION

ACADEMIC PROJECTS

- Developed an ExamPortal named "CrackIt!" using Angular 12 with Angular Material for web design and the Spring Boot framework for the backend. And used Spring Data JPA to communicate backend code with an Oracle database, Restful web services to integrate frontend with backend functionality, and industry-standard HTTP, Spring Boot.
- This project is a web-based application that allows users to create, take, and grade exams online. It is useful for educational institutions, organizations, and businesses that need to assess the knowledge and skills of their students or employees.

- Developed a web-based application using Angular for frontend design and the Spring Boot framework for the backend. And used Spring Data JPA to communicate backend code with a MySQL database and implemented Restful web services.
- This application allows customers to make table reservations through the Restaurant Management System, providing guests with a simple and practical way to reserve tables. The project includes functions for managing reservations based on table availability.

- Developed "JOB4U," an Online Job Portal inspired by LinkedIn, utilizing HTML and Bootstrap for frontend design, and Go (Golang) for backend development and security.
- This web-based application allows job seekers to search and apply for job openings. It includes features like job search with filters for location, title, and industry, as well as user registration and login. Employers can post jobs, review resumes, and manage applications via a dedicated dashboard, streamlining the job search process.
