

# Christopher Amaya

Software Engineer

Over five years working as a full-stack engineer in an agile environment with experience in mobile and web development, design, documentation, microservices, and databases. Seeking a challenging and collaborative environment to continue utilizing and improving my skill-set.

## Work History

**Developer** 2022-05 - 2025-02

- Mortgage Coach & TrustEngine, Irvine, CA*
- Led development of a React dashboard to visualize and modify data using a CRUD Express service.
  - Spearheaded the adoption of accessibility principles, ensuring compliance with WCAG "AA" and "AAA" standards to meet legal requirements.
  - Built feature flag system with AWS Lambda and Split.io for feature management.
  - Created testing tools and strategies to improve QA team efficiency.
  - Delivered React Native app with multidisciplinary team, approved on both stores.
  - Researched, planned, and hired for React Native app technical implementation.
  - Collaborated with product team to strategize and estimate under tight deadlines.
  - Transitioned team and product from waterfall to agile development model.
  - Gained experience working with Cursor and other AI technologies to maximize productivity.

**Software Engineer** 2021-05 - 2022-05

- JPMorgan Chase & Co., Dallas, TX*
- Delivered an experimental project that stakeholders loved that increased performance of data analytics
  - Established "discoverability" practice by testing multiple libraries, and preparing teamwide demos
  - Created and researched our first unit (Jest/RTL) and integration (Cypress) tests
  - Engaged in user testing and feedback with our UX team. Learned basic UX standards and provided a voice from engineering
  - Independently built tickets as UX reported suggestions and bugs appeared
  - Documented designs using sequence diagrams, class diagrams, and API mappings
  - Onboarded new engineers by providing documentation, personal knowledge, and online courses
  - When mistakes were made between teams, collected feedback and provided new lines of communication to fill gaps. Separated areas of discussion and documentation for better organization
  - Regularly communicated with other teams, management, stakeholders, product, UX, and more

**Software Engineer** 2018-11 - 2020-04

- Digital Map Products, Irvine, CA*
- Fully designed and implemented a microservice in express.js that would sync with databases, run API calls utilizing Agenda library, and in-house APIs to time and check records in database. Later staged using Docker Hub, Kubernetes, and Kong
  - Constructed outline of project that requested several API's on over 200 million records using Camunda. Utilized and edited API's across the company that broke data-sets apart, and recombined data into one table. Wrote MySQL and SQL scripts on output to link keys between records. Created Python script to generate MySQL/SQL statements
  - Regularly utilized tools like Postman, Source Tree/Bitbucket, Jira, SSMS, VSCode, and others in day-to-day challenges.

## Education

**B.S in Computer Science and Engineering, The University of California, Irvine**  
September 2012 - March 2017

## Contact

**Address**

## Skills

React/Redux/ReactQuery/Hooks  
React Native  
Node.js  
Express.js  
Jest & React Testing Library  
jQuery  
Cypress Component and E2E Testing  
Cucumber  
REST  
HTTP  
HTML  
CSS  
Android  
Kubernetes  
Docker Hub  
Javascript  
Typescript  
Python  
Flask  
SQL  
MySQL  
C#  
Java  
Split.io  
AWS Lambda  
AWS Secrets Manager  
Accessibility (WCAG)  
Visual Studio Code  
Git  
Git Hub  
Bitbucket  
Jira  
Agile Development Methodologies  
Documentation
