Objective:

Seeking a full-time software engineering position with a development team passionate about developing a quality product from start to finish. I am willing to relocate anywhere in the United States or work remote.

Education:

University of Minnesota, 2010-2014
Minneapolis, MN

Bachelor of Science in Computer Science - GPA: 3.63

NETSCOUT – Agile software engineer – Apr 2015 – Oct 2016
Colorado Springs, CO

Upgrade and maintenance of flagship packet capture and network analysis system
(*C++, C, Java, JavaScript, SQL (Postgres), Linux drivers*)

- Made full-stack contributions to agile development project
- Coordinated daily with five scrum teams and more than 50 engineers
- Owned from start to finish several major features
- Improved legacy code, including stability and performance fixes
- Investigated and fixed many critical software bugs reported by clients at remote sites
- Educated sales team on new feature owned and implemented by myself that helped close \$11 million dollar deal with major client

Application, API, and infrastructure development for mobile network testing application
(*Android, Java, Go, REST, AWS, Docker, Chef, Micro-service architecture*)

- Quickly ramped-up to full productivity on unfamiliar tools
- Developed Android app full-stack from core services to UI design and everything in between
- Relieved QA bottleneck by automating time-consuming tests using Robotium
- Assisted build-out of cloud infrastructure on AWS, using Amazon EC2, S3, and OpsWorks

2017 – 2024 – Out of the field for personal reasons

Solo Projects – See my portfolio at *nepulusoft.com*

(*Javascript, Pixi.js, jQuery, jQuery-UI, HTML, CSS*)

TinyEMDR – an open-source web-based Eye-Motion Desensitization and Reprocessing tool

(Rust, MongoDB, TypeScript, Pixi.js)

Monument (working title) – Work-in-progress massively multiplayer online (MMO) video game about worshiping savage gods in an untamed wilderness

(Javascript, Pixi.js, jQuery, jQuery-UI, HTML, CSS)

Strandships (on hold) – Work-in-progress single-player indie video game about building factories and space rockets
strandships.tumblr.com

Skills:

- Seasoned agile developer
- Self-starter, will take responsibility for my part of the project with minimal oversight
- Quick ramp-up on new projects and unfamiliar languages or tools
- Comfortable with large and/or long-running projects
- Good communication with teammates to coordinate changes to requirements, timeline, or implementation strategy, to review code and fix bugs, and to empower other engineers with specific knowledge they may need
- Experience optimizing and debugging performance-critical, highly-parallel programs
- Experience with object-oriented, imperative, and functional programming

Programming languages, frameworks, and tools:

Proficient:

C++, Java, C, Javascript, Rust, Python, HTML5, Linux/Unix,
Multi-threading, Unit testing, JSON, Git, GDB, Valgrind, Pixi.js, jQuery-UI, Love2D, SDL

Some Experience:

Android, Go, AWS, Docker, REST, Micro-services, Async architecture, Lua, jQuery, TypeScript, CSS, SQL, MongoDB, Linux drivers, Bash, Make, XML, Scheme, x86 Assembly, OpenGL, GLSL
