SUMMARY

Data and BI Analyst with around 4 years of experience delivering analytics and BI solutions across healthcare, finance, and Operations domains using Python, SQL, Power BI, BigQuery, and Looker. Experienced in data quality improvement, EDA, cloud cost optimization, and KPI dashboarding, translating complex data into accurate, actionable insights within Agile environments.

SKILLS

Programming & Query Languages & Methodologies: Python, SQL, PL/SQL, R, SAS, SDLC, Agile, Waterfall

Data Analysis & Statistics: Data Cleaning, Data Wrangling, Exploratory Data Analysis (EDA), Statistical Analysis, Predictive Analysis, Feature Engineering, Data Mining

Analytics & ML Libraries: NumPy, Pandas, SciPy, Scikit-learn, TensorFlow, PySpark, Matplotlib, Seaborn, ggplot2

Data Visualization & Reporting: Tableau, Power BI, Looker, MS Excel (Pivot Tables, VLOOKUP), Ad-hoc Reporting

Databases & Data Management: MySQL, PostgreSQL, SQL Server, Oracle, Data Warehousing, Data Modeling, Data Architecture

Cloud & Analytics Platforms: AWS, Azure, Google Cloud Platform (GCP)

Development & Version Control Tools: Git, GitHub, GitLab, Visual Studio Code, PyCharm, Jupyter Notebook

EXPERIENCE

Centene

USA

Data Analyst

Jan 2025 - Present

- Led end-to-end data analysis projects on healthcare operational datasets using Python, SQL, and Pandas, improving data accuracy by 32% and enabling faster downstream reporting for cross-functional stakeholders.
- Optimized BigQuery analytical tables using date-based partitioning on transaction and event timestamps, cutting data scanned per query by 45–55% and contributing to \$1,500 in monthly cost savings.
- Monitored and controlled BigQuery query costs by optimizing table design and query patterns, reducing monthly query spend by \$1,200–\$1,800 while maintaining analytical accuracy.
- Conducted exploratory data analysis (EDA) and statistical analysis on member utilization and claims-related data, identifying trends that contributed to a 15% improvement in predictive insights for operational planning.
- Developed executive-ready KPI dashboards in Looker, translating complex analytical outputs into actionable insights and reducing ad-hoc reporting requests by 28%.
- Partnered with business and technical teams in an Agile SDLC environment, delivering data-driven solutions on time with a 95% sprint completion rate while maintaining strong documentation standards.

Accenture

India

Data Analyst

April 2022 - May 2024

- Streamlined enterprise data ingestion processes by 35% by automating pipelines using Azure Data Factory and secure API to ingest invoice, supplier, and payment data from SAP and NetSuite into SQL Server, eliminating legacy SFTP-based transfers.
- Accelerated analytics delivery by designing and scheduling SQL Server Agent jobs to orchestrate recurring ETL refreshes, ensuring dashboards and reports consistently reflected up-to-date operational and financial data.
- Improved data quality and reliability by optimizing SQL stored procedures, joins, and transformation logic, enabling consistent movement of clean, validated data from staging to production tables.
- Reduced reporting errors and rework by implementing Python-based data validation scripts and SQL anomaly checks to detect missing, duplicate, and mismatched records prior to downstream reporting.
- Enhanced stakeholder visibility by 20% by developing Power BI dashboards showcasing supplier invoice trends, payment aging, and spend analysis, enabling finance and operations teams to proactively monitor performance and investigate issues.

Business Analyst

August 2021 - April 2022

- Partnered with finance, procurement, and operations teams to gather and document business requirements for invoice, supplier, and payment reporting from SAP and NetSuite, ensuring alignment between business needs and technical solutions.
- Translated stakeholder requirements into functional specifications, data mappings, and validation rules, reducing ambiguities and minimizing rework during development and testing.
- Led User Acceptance Testing (UAT) for financial and operational reports by creating test cases, validating ERP-to-SQL data accuracy, and coordinating issue resolution, enabling faster sign-off and smoother releases.
- Investigated data discrepancies identified during UAT and stakeholder reviews, collaborating with developers to resolve root causes and reduce post-release reporting defects by 20%.
- Supported change management and releases in Agile and Waterfall environments, ensuring stakeholder approvals, data sign-off, and reporting readiness.

EDUCATION

Master of Science in Business Analytics

May 2025

University at Buffalo (North Campus)

Buffalo, NY
