SUMMARY

Data Analyst with experience delivering actionable analytics solutions across supply chain and consumer goods domains. Strong background in forecasting, inventory analytics, and dashboard automation, with hands-on ownership of SQL pipelines, ETL workflows, and Power BI reporting used by global planning teams. Proven ability to translate complex operational data into clear, decision-ready insights that improve forecast accuracy, reduce risk, and drive measurable business outcomes. Currently pursuing a Master's degree in Data Science, Analytics and Engineering at Arizona State University.

RELEVANT SKILLS

Analytics & Business Insight: Predictive Forecasting, Time Series Analysis, Statistical Analysis, Ad-hoc Analysis, Root Cause Analysis, Executive & Stakeholder Reporting, Data Storytelling, Machine Learning Models, Model Evaluation, Forecast Smoothing, ANOVA Testing.

Data Engineering & Automation: ETL and ELT Pipeline Design, Report Automation, Shell Scripting, Data Validation & Quality Checks, Workflow Optimization.

Software & Tools: Python, SQL, SAS, R, Tableau, Power BI (dashboards, exploratory builds), Databricks, Excel, NumPy, Pandas.

Domain Expertise: Digital Supply Chain Management & Analytics (MRP, MPS, Capacity Planning, Inventory Management, Supplier & Planner Collaboration), Consumer Packaged Goods (CPG), Semiconductor Operations.

WORK EXPERIENCE

Supply Chain Analyst, Intern

06/2025 - 12/2025

Skyworks Solutions, Inc., San Jose, United States

- Designed and **delivered interactive Power BI dashboards** integrating SAP ERP and Excel data to monitor forecast accuracy, inventory gaps, lead times, and material readiness across global manufacturing sites.
- Rebuilt legacy reporting logic into a unified SQL pipeline powering a new Expiring Inventory dashboard, consolidating **expiry risk, scrap valuation, and segmentation logic** into a single scalable data model.
- Automated reporting workflows by integrating SAP ERP extracts with downstream analytics layers, **reducing manual reporting effort by 40%** while maintaining data accuracy and auditability.
- Enabled Copilot-friendly dashboards to support **natural-language insights**, improving accessibility of analytics for planners and non-technical stakeholders during operational decision-making.
- Partnered with supply chain planners and sourcing teams to analyze component-level demand and supply mismatches, supporting corrective planning actions that **improved forecast accuracy** and reduced shortage risk.
- Identified the top three drivers of inventory discrepancies through component-level analysis and recommended process improvements that **reduced stockouts by 10%**.
- Developed **KPI frameworks** to track inventory turns, on-time delivery performance, and material availability, strengthening risk visibility and supporting day-to-day planning and escalation decisions.

Data Analyst

09/2022 - 03/2024

LatentView Analytics, Chennai, India

- Built and deployed a predictive forecasting model used by **client planning teams** that improved forecast accuracy by 14% and supported demand and inventory planning decisions tied to an estimated **\$1.2B in revenue impact**.
- Owned the end-to-end forecasting pipeline, coordinating **more than 10 SAS** and shell scripts to automate data ingestion, smoothing, transformation, and validation, ensuring reliable inputs for recurring forecasting and planning cycles.
- Identified key business and data quality pain points through large-scale data mining and exploratory analysis, and collaborated with **cross-functional teams** to design solutions that improved forecasting accuracy, data reliability, and operational decision-making.
- Reduced total pipeline runtime from more than ten hours to 2.5 hours by modularizing workflows, reusing promotional datasets, and introducing parallel execution, **enabling faster forecast refreshes and tighter planning timelines**.
- Designed and maintained **Power BI & Tableau dashboards** tracking forecast accuracy, bias, coverage, sales trends, and warehouse efficiency used in weekly operational and performance reviews across **more than 1,000 retailers**.
- Built logic to detect and reprocess new products, reconcile forecasts against historical sales, and address missing segments using historical shipment data, **ensuring full customer-level coverage** for planning and reporting teams.
- Analyzed sales and inventory trends to uncover demand drivers and seasonality patterns, providing insights that supported improvements in **inventory turnover** and **demand planning accuracy**.
- Collaborated closely with supply chain and business teams to translate client feedback into analytical solutions, delivering recurring insights through **data storytelling** and **executive-ready visualizations**.
- Standardized and profiled large CPG datasets to improve data reliability and reduce manual intervention, supporting **reproducibility, auditability, and smoother team onboarding**.

EDUCATION

Arizona State University

08/2024 - 05/2026

Master of Science in Data Science, Analytics & Engineering (Electrical Engineering)

GPA: 3.67

Coursework: Statistical Machine Learning, Artificial Neural Computation, Time Series Analysis & Forecasting, Statistics for Data Analysts, Probability and Random Processes, Mathematical Foundations of ML, Data Mining, Data Processing at Scale.

Easwari Engineering College (Anna University)

08/2017 - 04/2021

Bachelor of Engineering in Electronics and Communication Engineering

GPA: 3.49
