Technical Skills

- **Languages:** Java | C++ | Python | JavaScript | HTML | CSS | React
- **Frameworks:** Spring | Mockito | JUnit
- **Tools:** IntelliJ | Eclipse | Jira | SQL | Power BI | Microsoft Office | G-Suite | Jira | Confluence
- **Methodologies:** Agile | Test-Driven Development (TDD) | DevOps

Professional Experience

Wells Fargo

New York, NY

Software Engineer

July 2023 – June 2025

- Developed and maintained Java applications for Wealth & Investment Management, improving first-time user experience by 15% through optimized, secure, and scalable code.
- Led the design and implementation of key features, ensuring seamless integration with existing systems and alignment with business objectives.
- Collaborated with cross-functional teams, including UX/UI designers, product managers, and QA teams, to deliver user-centric features on time, adhering to Agile methodologies and financial industry regulations.
- Conducted in-depth code reviews, enhancing security protocols by 20% and identifying performance bottlenecks for improved application efficiency.
- Wrote comprehensive unit tests with JUnit, increasing code coverage and ensuring reliable, bug-free software delivery.
- Debugged and resolved complex production issues, reducing production incidents by 25% and contributing to overall system stability and performance improvements.

Mastercard

New York, NY

Product Development Intern

January 2022- February 2022

- Developed a cancellation tracker that increased revenue by 10% by automating customer management processes and enhanced tracking of subscription cancellations.
- Improved customer security by implementing real-time alerts and secure authentication protocols within the tracker, reducing fraudulent cancellations.
- Explored and integrated Mastercard APIs to prototype a transaction monitoring tool, enhancing fraud detection efficiency by identifying suspicious transaction patterns.
- Collaborated with the data science team to implement machine learning algorithms within the monitoring tool, leading to more accurately identifying fraudulent activities.
- Conducted performance tests and optimizations, ensuring scalability and seamless integration with existing payments.

NYC Department of Education

New York, NY

Tech Support Intern

January 2022 – May 2022

- Investigated and documented software and hardware support issues across remote, VDI, and on-site users, ensuring high accuracy and customer satisfaction.
- Participated in incident response and root cause documentation, improving troubleshooting workflows and support ticket resolution quality.
- Collaborated with teams to ensure **audit-readiness and policy compliance**, aligning IT processes with operational quality standards.
- Documented incident resolution steps, improving IT support knowledge bases and onboarding workflows.

NASA L'Space Mission Concept Academy Computer Science Department

New York, NY
January 2022 - May 2022

- Coordinated with a multidisciplinary team, including engineers, scientists, and project managers, to define mission objectives, timelines, and deliverables for the proposed lunar exploration mission.
- Designed a computer system for the secondary payload, responsible for collecting and transmitting data, demonstrating advanced problem-solving and system integration capabilities.
- Developed software algorithms to process data collected from the lunar surface, ensuring accurate telemetry and robust communication between the payload and mission control.
- Presented findings and technical reports at various stages of the mission design process, refining the payload system based on feedback from NASA experts and peer reviews.

Education

Georgia Institution of Technology

Masters of Science in Cybersecurity

August 2025 –Present

City University of New York Hunter College

Bachelor of Arts in Computer Science

May 2023
