Data Analyst

EXECUTIVE SUMMARY

- Over 4+ years of experience in Data Analysis including Data Extraction, Manipulation, cleansing, Validation, and forecasting.
- Excellent data exploration and manipulation skills using Python libraries.
- Involved in all the phases of the project life cycle, including data acquisition, data cleaning, data engineering, statistical analysis, testing and validation and data visualization.
- Conducted a variety of data analysis such as predictive modelling, statistics, Machine learning, Data Mining, and other data analysis techniques to extract insights from structured and unstructured data.
- Created dashboards using stack bars, bar graphs, scattered plots, and geographical maps in Power BI.
- Built reports and dashboards to monitor KPIs (Key Performance Indicators) to understand drivers of KPI changes.
- Domain knowledge and experience in Retail, Healthcare and Production industries.
- Expertise in transforming business resources and requirements into manageable data formats and analytical models, designing algorithms, building models, developing data mining and reporting solutions that scale across a massive volume of structured and unstructured data.
- Proficient in managing entire data science project life cycle and actively involved in all the phases of project life cycle including data acquisition, data cleaning, data engineering, statistical analysis, testing and validation and data visualization.
- Knowledgeable in Machine Learning algorithms and Predictive Modeling including Regression Models, Decision Tree, Random Forests, Sentiment Analysis, Naïve Bayes Classifier, SVM, Ensemble Models.
- Knowledgeable in Natural Language Processing (NLP) and Text Mining.
- Proficient in Python packages NumPy, Pandas, Scikit-learn, Matplotlib and Seaborn used in Data analysis and Data visualization.
- Hands on Experience in writing SQL and PL/SQL queries.
- Proficient in data visualization tools such as Power BI, Python-Matplotlib/Seaborn, Microsoft Visio to create visually powerful flow charts and reverse engineer database relationships.
- Excellent in building interactive reports and dashboards with customized parameters and user - filters using Tableau.
- Experienced in Agile methodology and SCRUM process.
- Strong business sense and ability to communicate data insights to both technical and nontechnical clients.
- Used state-of-art models like XG Boost, Random Forest, SVM with help of Scikit-learn and found best model which will help at the time of deployment.
- Proficient in data mining techniques like Association, classification, Outlier detection, Clustering.
- Involved in the entire Data science project life cycle and actively involved in all the phases including Data extraction, Data cleaning, Statistical analysis, and Data visualization with large data sets of structured and unstructured data.

- Excellent communication skills. Successfully working in fast-paced multitasking environment both independently and in collaborative team, a self-motivated enthusiastic learner.
- Gathered and loaded data into Power BI from various sources including SQL Server, Web sources and Excel files.
- Assembled large, complex data sets that meet functional / non-functional business requirements.
- Designed and executed analytic projects, generated insights to support business decisions using advanced analytical and visualization techniques such as descriptive, predictive, and prescriptive analytics.
- Communicating with and supporting various internal and external stakeholders.
- Worked with technology and analytics team to support the development of tools and dashboards.
- Local to Prospect Heights, IL and would give preference to a remote assignment.

TECHNICAL SKILLS

Databases	Oracle, MySQL, SQLyog, Microsoft Access, SQL Server
Programming Languages	Python, SQL, SAS
Machine Learning	Regression analysis, Clustering, Classification, Recommendation systems, Association Rule mining, Natural language processing, Predictive Modeling
Data Analysis / Visualization Tools	Power BI, Microsoft Visio, Excel, Python - Matplotlib / Seaborn, Weka
Cybersecurity	Proofpoint, Python Scripting, Fortinet NSE-1
HR	Workday Learning Partner, SharePoint

Knowledge Areas:

- Cloud Technologies: Amazon S3, Amazon EC2
- Methodologies: Agile, Scrum, Lean Six Sigma, Waterfall
- Operating Systems: Windows, Mac, Linux, Unix.

PROFESSIONAL EXPERIENCE

Client: Caterpillar Inc - East Peoria, IL
Present

June 2021 -

Role: Data Analyst/Developer

Responsibilities:

- Combine data and perform cleansing, consolidation, cross referencing, and Data Analytics from different data sources
- Tested and standardized data to meet the business needs using excel, SQL, and other tools
- Developed dashboards, metrics, or workbooks from multiple data sources using Power BI including quick filters, parameters, etc. to handle views efficiently
- Created and developed parameterized, drill down and AD Hoc reports when necessary
- Handled relevant data effectively per the training function, courses, as well as anticipated needs
- Executed the phishing program per the plan and provide data analytics when applicable
- Tackled relevant scenarios with on-going challenges/incidents in the cybersecurity space

- Compiled phishing result, provide relevant data analytics for user awareness metrics, and generate ad-hoc or requested reports
- Leveraged the result of the data analytics for targeted phishing and provide feedback for user awareness learning and incorporate it into the related projects
- Became fully knowledgeable of the phishing program, its vendor support, and developing / maintaining the vendor relationship; know the contract terms in business application
- Provide relevant data to decision makers. Be proactive and curious look for insights and opportunities within the data that can provide a positive business impact.
- Kept up with the industry phishing programs and become familiar with other vendors/ phishing programs or solutions that are available in the marketplace as well as its pro and cons

Environment/Tools: Python, SQL, Excel, Workday, SharePoint, Proofpoint, Power BI

AdvanSoft International- Arlington Heights, IL

Feb 2021 –

May 2021

Data Analyst

Responsibilities:

- Participated in all phases of project life including data collection, data mining, data cleaning, developing models, validation, and reports creating.
- Used clustering technique K-Means to identify outliers and to classify unlabeled data.
- Developed segmentation models using K-means Clustering in order to discover new segments of users.
- Created Power BI dashboards using stack bars, bar graphs, scattered plots, and geographical maps.
- Evaluated statistical information to determine risk.
- Interaction with Business Analyst, SMEs, and other Data Architects to understand Business needs and functionality for various project solutions.
- Carrying out specified data processing and statistical techniques such as sampling techniques, estimation, hypothesis testing, time series, correlation and regression analysis using Python.

Environment/Tools: Python, PyCharm, Power BI, Machine learning, MySQL

Illinois Department of Public Health, Springfield, IL

Feb 2020 –

Dec 2020

Data Analyst

Responsibilities:

- Participated in ETL process, including data analysis, data profiling, and data validation and data mapping.
- Conduct a variety of tasks such as: predictive modelling, statistics, machine learning, data mining, and other data analysis techniques to extract insights from structured and unstructured data.
- Analyzed data in a variety of formats (xlsx, csv, json and others)
- Used SSIS for data integration and SSRS for creating reports.

- Implemented Machine Learning, Computer Vision, Deep Learning and Neural Networks algorithms using TensorFlow and designed Prediction Model using Data Mining Techniques with help of Python, and Libraries like NumPy, SciPy, Matplotlib, Pandas, and Scikit-learn.
- Used Scikit-learn in modeling various classification and clustering algorithms including support vector machines, random forests, gradient boosting, k-means.
- Implemented Classification using supervised algorithms like Logistic Regression, Decision trees, KNN, Naive Bayes, Random Forest etc.
- Responsible for design and development of advanced Python programs to prepare to transform and harmonize data sets in preparation for modeling.
- Handled importing data from various data sources, performed transformations.
- Created Entity-Relationship diagrams and Data flow diagrams using MS Visio.
- Gathered and loaded data into Power BI from various sources (SQL Server and excel files) including Web sources.
- Perform data analysis and data modeling to create source to target mappings.
- Developed different types of Power BI Reports, working at the data model to fit needs and discovering data to best answer the business requirements.
- Implemented Agile Methodology for building an internal application.
- Interaction with Business Analyst, SMEs, and other Data Architects to understand Business needs and functionality for various project solutions.

Environment / Tools: SAS, Python, PyCharm, Tableau, MS Visio, Machine learning,

University of Illinois at Springfield-Springfield, IL

Oct 2019-

Jan 2020

Data Analyst

Responsibilities:

- Produced monthly reports using advanced Excel spreadsheet functions.
- Coordinated statistical data analysis, design, and information flow.
- Participated in requirements meetings and data mapping sessions to understand business needs.
- Used SQL for data cleaning and formatting to decrease the processing time and increase quality of data.
- Visualized data to better understand effects of policies and gain actionable insights.

Environment/Tools: MS Excel, SQL Server, MS Word

MASAS, Hyderabad, Telangana, India

01/2017

-

07/2019

Data Analyst/Business Intelligence Analyst

Responsibilities:

- Involved in translating business requirements into technical design specifications.
- Based on business requirement, developed SQL DB to implement the business rules and transformations.
- Worked with Business Intelligence Manager to plan BI strategies, create BI road map and budget plans to deliver on organizations Business Intelligence needs.
- Supported business growth through strategic planning and process improvement.

- Business Data modeling and reporting using Microsoft Excel, SQL and Power BI.
- Data governance and Data quality management using Python libraries.
- Built Inventory Management, Employee Management system for better management.
- Built software for intelligent inventory flow management.
- Increased online sales by better targeted marketing to retail customers using clustering.
- Written and modified Scripts to automate the data loading using Python.
- Writing and Debugging SQL stored procedures, Views and User Defined Functions.
- Created database objects like tables, views, indexes, stored-procedures, triggers, and user defined functions.
- Developed administrative tasks using SQL for performing daily Backups and Recovery procedures.
- Worked with the developing team in the Writing functions for Upload download functionality, Data transfer and migration.
- Prepared daily and weekly status reports and collaborated with other team members.
- Created and managed schema objects such as tables, views, constraints, indexes, functions, procedures and triggers and maintained Referential Integrity.
- Coordinate development activities by managing the technical requirements in a requirements traceability matrix.
- Co - Authoring and preparing Graphical depictions of Narrative Use Cases, creating UML Models such as Use Case Diagrams, Activity Diagrams and Flow Diagrams using MS Visio.
- Checking the integrity of the newly added features and their effect to the existing ones with integrity testing and regression testing.

Environment / Tools: SQLyog, MySQL, Python, Power BI, Machine Learning, MS Visio, Machine Learning,

EDUCATION

- Master of Science in Computer Science - Dec 2020
University of Illinois, USA
- Bachelor of Engineering in Information Technology – April 2019
Osmania University, INDIA
