### ***Professional Summary***

Recent Computer Science MSc graduate with a strong foundation in programming, cybersecurity, and software development. Certified in CompTIA Security+ and experienced in applying cybersecurity techniques to real-world scenarios. A collaborative problem-solver and quick learner passionate about leveraging technology to deliver impactful solutions in dynamic tech environments.

### **EDUCATION**

**University of Bridgeport** | Bridgeport, CT

Master of Science in Computer Science | May 2025

**Relevant Coursework:** OOP With Design Patterns, Deep Learning, Data Mining, Web-Based Applications Development, Ethical Hacking, Cyber Security, Network Security

**SUNY Buffalo State University** | Buffalo, NY

Bachelor of Science in Fashion & Textile Technology | May 2020

### **CERTIFICATIONS**

- CompTIA Security+ (SY0-701) | Exp. 05/27/2027

### **TECHNICAL SKILLS**

- **Programming Languages:** C#, Python, JavaScript, C++, HTML
- **Tools & Frameworks:** VS Code, Microsoft SQL Server, PyCharm, Power BI, Jupyter Notebook, .NET, JQuery
- **Operating Systems:** Windows, Linux, macOS
- **Other Skills:** Database Design, Scientific Analysis, Mathematical Modeling, Adobe Creative Suite, PLM, RLM

### **PROJECTS**

**ArcFaceV2:** Implemented and experimented with the ArcFace loss function, tailored for challenging multi-class classification tasks like face recognition. Utilized cosine distance instead of Euclidean distance to enhance robustness and achieve better class separation in high-dimensional spaces.

**BrickGame:** Developed a game in C++ using an object-oriented approach. Designed classes such as BrickArchitecture to manage boundaries and bricks, and Ball to handle movement and interactions with game elements. Enhanced object-oriented programming skills while creating a dynamic and interactive gameplay experience.

**Valentine-S-Day:** Built a Valentine's Day-themed website using HTML and Javascript, offering users creative options to plan a date with their special someone. The site includes interactive features for date ideas and a user-friendly design to enhance the romantic experience.

**NNDecisionBoundary:** This project builds a deep linear neural network from scratch, exploring activation functions, gradient descent methods, and dropout. Using the moon dataset, it visualizes decision boundaries to study underfitting, overfitting, and generalization. Experiments with layers, neurons, and activation types reveal how architecture impacts performance.
