

Professional Summary:

- Over **5+ years** of experience in designing, developing, and testing Client/Server Web-based Applications using **Microsoft .NET Framework** and **SQL Server** with **Agile** and **Waterfall** Development Methodology.
- **Professional experience** across all stages of the **SDLC (Software Development Life Cycle)**, including requirement gathering, analysis, design, coding, debugging, testing, deployment, and documentation. Demonstrated expertise in delivering projects for **banking** and **healthcare**, adhering to industry-specific regulatory and compliance requirements.
- **Expert in Microsoft Technologies** including **C#, ASP.NET, MVC, Entity Framework, ADO.NET, SQL Server, WCF, Web API RESTful Services**, and **IIS**, delivering secure and scalable applications for the **banking** and **healthcare** sectors with a focus on performance and compliance.
- Implemented **Azure Key Vault** for **secure storage of sensitive banking and healthcare data** such as **API keys, secrets**, and **connection strings**, ensuring regulatory compliance with standards like **PCI DSS, HIPAA**, and **GDPR** for secure access in **.NET** applications.
- Worked on **Azure Site Recovery** and **Azure Backup**, deploying instances in **Azure environments** and **data centers**, migrating critical **healthcare** and **banking data** to the cloud. Leveraged **Log Analytics** to monitor and analyze data from all **Azure Resources**, identifying and resolving issues promptly to ensure system availability.
- Configured **Azure Multi-Factor Authentication (MFA)** as part of **Azure AD Premium** to securely authenticate users, ensuring compliance with stringent **security protocols** in banking and healthcare environments. Created **custom Azure templates** for quick deployments, **PowerShell scripting**, and ensuring seamless failover configuration for **Azure SQL DB** with **Geo-Replication** across regions.
- Developed **Single Page Applications (SPA)** using **Angular, jQuery, Blazor Web Assembly**, and **Bootstrap CSS** to deliver responsive and interactive **banking** and **healthcare** user interfaces. Wrote unit test cases for **Web APIs** and **Azure Functions** to ensure the quality of the applications and services.
- Developed **custom Knockout.js bindings** to integrate backend data models with dynamic UI components, improving the responsiveness and functionality of banking and healthcare applications.
- **Experience in implementing Single Sign-On (SSO)** authentication and authorization using **Azure Active Directory (AAD)**, ensuring secure access management for banking and healthcare applications and enhancing user experience.
- Strong expertise in **frontend technologies** like **HTML, CSS, JavaScript, Angular**, and **React**, delivering seamless and intuitive user interfaces for **banking** and **healthcare** portals and mobile applications.
- Proficient in designing and consuming **RESTful** and **SOAP Web Services** for integrating **third-party banking services, payment gateways**, and **healthcare systems** while ensuring compliance with security and data privacy standards.
- Extensive experience in **SQL Server** and **Oracle databases**, writing complex **SQL queries**, stored procedures, functions, triggers, and views to support **banking and healthcare data operations**, with a strong focus on optimization and data integrity.
- Expertise in **data exchange** using **XML** and **JSON** formats, ensuring seamless and secure data flow across different systems and platforms in the banking and healthcare sectors.
- Proven experience in **report development** and **business intelligence solutions** using **SSRS** and **SSIS**, delivering actionable insights for **banking operations, financial reporting**, and **healthcare analytics**.
- Strong proficiency in **Object-Oriented Programming (OOP)** and **Design Patterns** such as **Singleton, Factory**, ensuring maintainable and scalable code in complex financial and healthcare systems.
- Proficient in **React** for developing modern web applications and **Blazor** for rich client-side user experiences in **full-stack C#** development, enabling the creation of secure, responsive, and high-performance applications.
- Hands-on experience in creating and maintaining **SSIS packages** for **data migration** and integration, including **importing/exporting** data from flat files, **XML, Excel**, and **Oracle databases**, ensuring data consistency in **healthcare** and **banking systems**.
- Experienced in **unit testing** software solutions, conducting thorough root cause analysis, debugging, and ensuring **robust, error-free applications** in highly regulated environments.
- Led the **migration of classic ASP applications** to **ASP.NET** and **C#**, as well as the migration of **MS Access** to **SQL Server**, improving performance and scalability of banking and healthcare applications.
- Proficient in **CI/CD** using **Jenkins** and other automated deployment tools, streamlining the development lifecycle and ensuring faster, more reliable delivery of applications for banking and healthcare systems.

Technical Skills:

.Net Technologies	ASP.NET, VB.NET, C#, ADO.NET, WCF, WPF, LINQ, Blazor, Visual Studio Entity Frameworks, ASP.NET MVC.
Languages	C, C#, VB.

Scripting Languages	JavaScript, VB script, jQuery, Angular, TypeScript, Gulp JS, Node JS, React JS, Ext JS
Web Technologies	ASP, XML, XAML, XSD, XSLT, JSON, HTML 5, CSS, Bootstrap, SCSS.
Web Services	IIS, IBM Web Sphere, REST, SOAP.
Version Controls	Team Foundation Server (TFS), SVN, Visual Source Safe (VSS).
Development Tools	Microsoft Visual studio, Microsoft Visual Basic, C#, Java Script, N-Hibernate.
Database	Microsoft SQL Server, Oracle, IBM DB2, Mango DB
Reporting Tools	Crystal reports, SSRS.
Operating Systems \ Design Pattern	MS Windows, MVC, MVVM, Singleton, Factory, Repository
IDE's and Tools\ Database	Visual Studio \ SQL Server / Oracle
Clouding Computing\ Migration & Reporting Tools	Azure, AWS/ SSIS, SSRS and SSAS

Work Experience

Client: Wells Fargo, San Francisco, CA

Apr 2024 – Present

Role: Sr Full Stack Dot Net Developer

Responsibilities:

- Designed and developed abstract classes, interfaces, and business logic components in C# to facilitate complex banking operations like transaction processing, fund transfers, and account management, ensuring high code reusability and scalability.
- Extensive experience with **Oracle RDBMS, SQL Server, and Azure SQL for handling** large-scale transactional data in the banking domain. Wrote optimized **T-SQL** queries, stored procedures, and triggers for high-performance data operations, including risk analysis, fraud detection, and real-time financial reporting.
- Developed RESTful APIs using ASP.NET Core Web API** to integrate third-party financial services, payment gateways, and external banking systems. Ensured secure data exchange and compliance with regulatory standards like **PCI DSS and GDPR**.
- Designed algorithms using graph **data structures** (adjacency list, adjacency matrix) for projects like **social networks, route optimization**, or network connections.
- Led the migration of the banking systems to Azure, including services such as **Azure SQL Database, Azure Data Factory, and Azure Data Lake** for better scalability, cost optimization, and enhanced disaster recovery.
- Created a Common Domain Model for the banking application using **Domain-Driven Design (DDD) principles**. Published the model via web services using **Azure SQL Server and C# .NET** to provide seamless access for the finance team through a SharePoint Web Portal.
- Implemented **Single Sign-On (SSO) using Azure Active Directory** to secure the application and provide seamless access control for employees and customers, with support for multi-factor authentication (**MFA**) and authorization rules.
- Designed and implemented dynamic and secure banking web portals and customer-facing applications using **React.js, CSS, and Ant Design**. Enhanced customer experience with responsive and intuitive user interfaces.
- Led the design and development of microservices for modularizing core banking functionalities such as customer account management, transaction history, and payment processing using **.NET Core, Docker, and Kubernetes**.
- Automated build, testing, and deployment pipelines in **Azure DevOps** to ensure faster and more reliable delivery of banking application features and bug fixes, significantly reducing release cycle time.
- Utilized **Knockout.js** for complex client-side data binding, enabling real-time updates of transaction data, customer information, and account statuses on the user interface.
- Implemented custom data models and business intelligence solutions using **Azure Data Lake, Azure Analysis Services, and HDInsight** to provide the banking team with powerful tools for fraud detection, risk analysis, and operational insights.
- Developed solutions integrating **MongoDB** for non-relational data storage, particularly for transaction logs, and utilized the **MongoDB .NET Driver for CRUD** operations and complex queries.
- Developed **WCF Services** for secure communication between internal banking applications to exchange sensitive data such as transaction records, customer profiles, and payment history.
- Deployed banking applications using **Azure Resource Manager (ARM) Templates** and monitored system performance using Azure Application Insights to ensure the availability and reliability of mission-critical financial services.

- Led efforts in implementing secure data storage and transaction workflows, adhering to financial industry regulations and ensuring data privacy, transparency, and compliance through **SSO, OAuth 2.0, and JWT** for secure authentication.
- Developed features such as real-time notifications for account activities, customized dashboards for users to view transaction summaries, and two-factor authentication (2FA) for enhanced security in financial transactions.
- Spearheaded the migration of the legacy Angular 2.0 banking application to **Angular 4/5** and upgraded **.NET 4.5** applications to **.NET Core 1.0**, significantly improving performance, scalability, and maintainability.
- Utilized **Azure Databricks, Apache Spark, and Spark SQL** to process large-scale transactional data, supporting real-time risk assessments, customer behavior analysis, and regulatory reporting.
- Designed and implemented custom **SSAS (SQL Server Analysis Services)** cubes to generate analytical reports and assist in decision-making related to financial portfolio management and fraud detection.
- Integrated various frameworks such as **Blazor, Telerik, and Radzen Blazor Components** to provide modern UI components and improve the overall banking application experience.

Client: Cigna Health, Nashville, TN

Nov 2022 – Mar2024

Role: Dot Net Developer

Responsibilities:

- Followed **agile development methodology** during the project life cycle.
- Developed and tested many features for dashboard using **Python, Bootstrap, CSS, JavaScript and JQuery**.
- Performed ETL using **Azure Data Bricks**. Migrated on-premise **Oracle ETL process to Azure Synapse Analytics**.
- Expert in developing JSON Scripts for deploying the Pipeline in **Azure Data Factory (ADF)** that process the data.
- Expert in using Databricks with **Azure Data Factory (ADF) to compute large volumes of data**.
- Used **WCF Services** for communications and to do atomic transactions.
- Used **LINQ** to query the database and filter the result as **XML**.
- Integrated **Splunk** with .NET applications to collect, index, and analyze application logs for real-time monitoring and troubleshooting.
- Led the development of cross-platform mobile applications for iOS and Android using **.NET MAUI and Xamarin**.
- Scheduled jobs to run the SSIS packages on daily basis using Azure SQL Server Agent.
- Integrated Blazor applications with third-party services and APIs, such as Azure services, RESTful APIs, GraphQL endpoints, and OAuth/OpenID Connect providers for authentication and data integration.
- Skilled in containerizing .NET Core applications using Docker and managing container clusters using AWS ECS (Elastic Container Service) or AWS EKS (Elastic Kubernetes Service).
- Used MS Visio and Lucid charts to make **ERD and UML** charts
- Optimized **joins** by using **INNER JOIN, LEFT JOIN, or CROSS JOIN** appropriately, ensuring minimal data retrieval.
- Familiar with React's component-based architecture, allowing for modular and reusable UI components, enhancing code maintainability and scalability.
- Developed and maintained backend APIs using **ASP.NET Core** to support mobile applications built with **Swift and Kotlin**.
- Monitored the health and performance of the SQL Server using **SQL Server Management Studio (SSMS), SQL Profiler, and Performance Monitor**.
- Integrated **AI-powered services** like **Azure Cognitive Services** (e.g., **Text Analytics, Computer Vision, Speech-to-Text, and Language Understanding (LUIS)**) into .NET applications to enhance functionality.
- Orchestrated all Data pipelines using Azure Data Factory and built a custom alerts platform for monitoring.
- Developed Rich User Interface for POC using XAML for WPF and Silverlight, **ASP.NET, IIS for Web with .NET3.5**, Visualstudio.NET2008 and Expression Blend and was responsible for converting Silverlight3.0 to Silverlight4.0 and configuring and hosting Silverlight application on IIS
- Involved in mentoring new and existing staff on **WPF, Silverlight and WCF**
- Designed and developed table/matrix style reports using **SSRS** and included them in the Application.
- For Transferring Data from file to another type of file through **SSIS** as an **ETL Tool**.
- Skilled in monitoring serverless Functions performance, health, and resource utilization using platform-specific monitoring tools, dashboards, and alerts.
- Used various controls in **.NET Framework**, example Grid View control to display data in tabular form and Data Page control for paging
- Experience in using build/deploy tools such as **Jenkins, Docker and OpenShift** for Continuous Integration & Deployment for Microservices.
- Developed Web Pages using **C#, ASP.Net, HTML, CSS, BOOTSTRAP, AJAX, JavaScript, JQuery, and XSLT**.

- Used VB script scripting language as a tool for regular windows job and another batch processing.

Environment: ASP.NET 4.0, C, ADO.NET, .Net Framework 4.0, Typescript, Azure, Web Services, VB.NET, REST API, MVC, JavaScript, jQuery, OAuth, XML, HTML, CSS, Ajax

CAPGEMINI, Hyderabad, India

Sep 2018 Aug 2021

Role: Dot Net Developer

Responsibilities:

- Developed Object Oriented approach for analysis and designing N-Tier architecture.
- Developed the presentation layer using **ASP .NET Web Forms, JavaScript, jQuery** and **CSS**.
- Designed and implemented database using Azure **SQL Server**.
Reviewing **unit tests** (using frameworks like **xUnit, NUnit, or MSTest**) and ensuring that the code is properly tested and that the tests are comprehensive.
- Used **CQRS patterns** to enable efficient handling of **read-heavy** and **write-heavy** workloads by optimizing queries and commands independently.
- Handling **JSON** requests and responses, setting up route handlers, and building clean, well-structured API endpoints.
- Created user-defined stored procedures and functions using Azure **SQL Server**.
- Developed reusable Terraform modules to provision resources such as virtual networks, storage accounts, and Azure App Services, supporting the deployment of .NET applications.
- Designed and implemented interactive, real-time features utilizing **HTML5's** local storage, **WebSockets**, and service workers.
- Worked on **high availability setups** for both **RabbitMQ** and **Elasticsearch**, ensuring consistent message delivery and quick search results in production environments.
- Designed relational **database schemas** in **PostgreSQL** to support business requirements, ensuring data integrity, normalization, and performance optimization.
- Actively participated in **code reviews**, providing constructive feedback to ensure adherence to coding standards, design patterns, and best practices (e.g., SOLID principles) for .NET applications.
- Coordinated **code deployment** with Continuous Integration/Continuous Deployment (CI/CD) pipelines integrated into version control systems like **GitHub Actions, GitLab CI, or Jenkins** to automate builds, tests, and deployment..
- Styled the **Vue.js** components using **CSS, SCSS, or CSS frameworks** like **Bootstrap** or **Vuetify** for consistent and responsive design across different screen sizes.
- Worked with **NoSQL databases** like **MongoDB** for handling unstructured or semi-structured data, ensuring scalability and flexibility in large data sets.
- Experience developing custom .NET applications or UIs that interact with **SAP** data, either through **SAP Gateway** or by calling **SAP BAPI** functions.
- Integrated **iTextSharp** to generate dynamic **PDF documents**, including invoices, reports, and contracts, automating document workflows and reducing manual intervention by **50%**
- Implementing **GraphQL APIs** in .NET using libraries like **GraphQL.NET** for more flexible querying.
- Integrated **Next.js frontend** with **ASP.NET Core backend APIs** to deliver data-driven dynamic web applications, ensuring seamless communication between the front-end and the .NET back-end.
- Worked on building screens with **ASP.Net MVC, JavaScript, jQuery, HTML, XHTML, CSS** and Unit testing.
- Extensively used **XML, XSLT and XSD** for data transfer across different systems.
- Worked with MVVM pattern and developed view-models using **typescript**.
- Extensively worked in ADO.NET for back-end connectivity to manipulate and retrieve data from **SQL Server db**
- Implemented appropriate error handlers for Run Time and Design Time Errors using **C#.NET**.
- Familiar with testing and debugging React applications using tools like Jest, Enzyme, or React Testing Library to ensure code quality and reliability.
- **Integrated Kendo UI components** such as grids, charts, and date pickers into **ASP.NET MVC** and **Web API** applications, enhancing user interactivity and performance for large data sets.
- Worked with **SSIS, SSAS, SSRS, and Crystal Reports**.

Environments: C# .NET, Entity Framework, ASP.NET MVC 4, HTML 5, CSS, XML, Visual Studio 2010, GIT, SQL SERVER 2008, IIS, JQUERY, SSRS, Office 2007 and Agile Methodology.

Education:

Master's in computer science - Campbellsville University, KY
