Experience

Stores.com, Carrollton, TX

Dec 2024 – Present

Software Development Engineer

Node.js | Express | React | Restify

- Optimized inventory recovery using a Node.js cron job and JSforce to autonomously re-list stranded inventory to e-commerce channels (via Salesforce), achieving a 75% increase in sell-through rate.
- Engineered automated evidence retrieval and staging for Stripe disputes by consuming Stripe webhooks, compiling data from internal microservice APIs, and submitting via Stripe API, reducing support agent handle time by 80%.
- Instrumented React dashboards to visualize real-time analytics, directly querying the PostgreSQL database to monitor warehouse efficiency, customer support agent performance, and user conversion metrics.
- Developed and launched core e-commerce features including a points and rewards system, shopping cart checkout, and reworked "Buy Now" page leading to 12% uplift in user conversions.
- Architected internal utility tools such as a warehouse location mapping system, a multifaceted item search engine, and an AI-backed merchandising event planner, used regularly across various operational departments.

Software Development Engineer Intern

May 2024 – Dec 2024

Projects

Freelance Project

Sep 2025

Bar Web App

Next.js | Python | Flask | SQLAlchemy

- Designed, developed, and launched web app for local bar with event advertising and ticketing features, utilizing React and Tailwind for architecting responsive, mobile-first UIs.
- Engineered a performant RESTful API to manage ticket lifecycles, implementing asynchronous QR code generation/emailing, and role-based authorization for admin tools such as ticket management and scanner.

Academic Project

Nov 2024

Warehouse Management System

C# | .NET | MAUI | MySQL | Docker

- Developed a cross-platform (iOS/Android/Desktop) inventory management app using .NET MAUI and C#, supporting real-time updates and managing a database of 10,000+ simulated SKUs.
- Implemented a secure authentication system and defined role-based access control to restrict inventory modification based on staff permission levels, ensuring data integrity.
- Leveraged Docker to containerize MySQL database, ensuring standardized development and simplifying environment setup for the entire team.

Technical Skills

Programming Languages: JavaScript/TypeScript, Python, C#, C/C++, PHP

Frameworks & Libraries: Express, Restify, React, Flask, Django, FastAPI, Next.js

Databases/Caching: MongoDB, PostgreSQL, Redis, MySQL, SQLite

Operating Systems: macOS, Windows, Linux (Ubuntu)

Tools: GitHub, Claude Code, GitHub Copilot, Spec Kit

DevOps & Testing: Azure, Docker, GitHub Actions, Puppeteer, Mocha, Pytest
