SUMMARY

Full Stack Java professional with over 5 years of extensive experience in all phases of Software Development Life Cycle (SDLC) such as Planning, Analysis, Design, Implementation, Testing and Maintenance of Web Based and Client-Server Architectures. Working experience on Java 8 and Java 11 features including Stream APIs.

- Expertise in Core Java concepts, such as Object-Oriented Design (OOD)/Object-Oriented Programming (OOP) skills, Multi-Threading, Generics, Exception Handling, Collections, Annotation, and some new features in Java 8.
- Experience in implementation of design patterns like MVC and Micro services, Factory, Abstract Factory, Singleton, Business Delegate and Data Access Object etc.
- Experience in developing Enterprise and Web applications using Java/J2EE and java-based technologies such as Servlets, JSP, Hibernate, Spring, EJBs, Struts, Web-Services, Java Mail, XML, JPA, JMS, and JDBC.
- Experienced in working with AWS Cloud platform and its services like: EC2, S3, ECS, ECR, CodePipeline, CodeBuild, CodeDeploy, Lambda, EKS, Elastic Beanstalk.
- Proficiently used Agile tools such as Jira or Azure DevOps to manage user stories, track sprint progress, and ensure visibility into project status for the entire team.
- Experience in implementing Web Services based in Service Oriented Architecture (SOA) using SOAP/ RESTful Web Services. Solid understanding of Micro Services, Spring boot, Pivotal Cloud Foundry.
- Experience in writing many test cases using Junit, Mockito, Cucumber framework.
- Utilized Docker to containerize applications, encapsulating dependencies, and runtime environments into portable, lightweight containers for consistent deployment across different environments.
- Coordinating with the Quality Assurance team and resolving the QA defects.
- Hands on experience in Web Application Development using Client Script design technologies like React JS, React - native, Angular JS, jQuery as well as HTML, CSS, XML, XSLT, Java Script.
- Expertise in designing and building RESTful APIs using popular web frameworks like Spring, Knowledge of HTTP methods like GET, POST, PUT, PATCH, and DELETE, and their use in building RESTful APIs.
- Proficient in using JSON and XML formats for data exchange between client and server. Familiarity with authentication and authorization mechanisms for RESTful APIs, including OAuth2 and JSON Web Tokens (JWT).
- Capability to build tables, stored procedures, indexes, create jobs in SQL Server, use SQL Server Management Studio and tools such as query analyzer, activity monitor and query profiler.
- Experience in Configuration Management, setting up version policies, building schedule using SVN, CVS and Git.
- Excellent communication and interpersonal skills with the ability to work individually as well as collaboratively in a team. Ability to adapt to modern technologies.

SKILLS

Programming: Java 7,8,11, J2EE, Python, C, C++, PHP

Platforms: Mac OS, Windows 8/9/10/11, Linux

Client Scripting: jQuery 1.8,1.9, Angular JS, Node.JS, JavaScript, bootstrap, HTML/CSS

Server Scripting: JSP1.2,2.1, JSP-EL, JSTL, Custom Tags.

Cloud Technologies: AWS (EC2, ECR, ECS, RDS, Lambda), Azure, Kubernetes

Web/App Servers/ Containers: WebSphere, Apache, Tomcat, JBoss EAP, WebLogic and Docker

Java/ORM Frameworks: Spring 3.x/4.x, Spring Boot, MVC, Hibernate 3.0, 3.1, 4.1, Kafka.

Version Control: Tortoise SVN, Git, GitHub

Middleware Technologies: SMTP, JMS, Kafka, Spring Integration

Databases: MySQL, Mongo DB, Firebase, Sybase, Dynamo DB, PostgreSQL.

CI/CD: ANT 1.9, Maven, Gradle, Jenkins, Azure DevOps.

Webservice Specifications and tools: Restful, JAX-RPC, JAX-WS, JAX-RS, SoapUI 4.0.

Defect Tracking: JIRA, Bugzilla, ServiceNow

CERTIFICATIONS

Microsoft Azure Cloud Developer Associate and Fundamentals.

PROFESSIONAL EXPERIENCE

Precision Tech Corp

Feb 2024 – July 2024

Sr. Software Engineer

- Involved in design and development on an agile platform to develop processes on Software Development life cycle (SDLC).
- Implemented TDD practices to enhance code quality by writing modular, testable, and maintainable code that adheres to SOLID principles and design patterns.
- Knowledge of how to use the new Java 8 features like Lambdas, Streams, and Date-Time API. Practical knowledge of using Java 8's Concurrency API to create multi-threaded apps.
- Implemented spring framework for Dependency Injection, support for the Data Access Object (DAO) pattern and integrated with Hibernate.
- Designed and developed the REST based Microservices using the Spring Boot, Spring Data with JPA (Java Persistence API) and Used Swagger to interact with API endpoints of the Microservices.
- Involved in migrating monolithic applications in Microservices Architecture and Developed Microservices using

AWS platform built upon Spring Boot Services.

- Implemented all the functionality using Spring IO / Spring Boot, Thyme leaf and Hibernate ORM.
- Executed Java2EE components using Spring MVC, Spring IOC, spring transactions and spring security modules.
- Wrote CRON jobs to do auto backups for disaster recovery.
- Secured REST APIs using industry-standard authentication and authorization mechanisms such as OAuth 2.0, JWT (JSON Web Tokens), or API keys, to protect sensitive data and prevent unauthorized access.
- Configured Swagger-UI and registered Microservices with Eureka server for service health monitoring.
- Monitored application performance using Spring Actuators and AWS CloudWatch, achieving 95% proactive issue resolution.
- Integrated microservices with Netflix Cloud Eureka for dynamic service discovery and registration, enabling automatic detection and management of services within a distributed system and API Gateway for centralized API management.
- Well-versed with Java heap, garbage collection algorithms, and memory leaks and proficiency in Java memory management.
- Implemented the authentication of the application using Spring Security and OAuth2.0.
- Implementing Oracle, SQL Queries & PL/SQL - stored procedures, functions, triggers, sequences and built-in functions to retrieve and update data from the databases.
- Setting up databases in AWS using RDS, Storage using S3 buckets and configuring instance backups to S3 buckets.
- Integrated RedisQ with Kafka to cache and synchronize data between microservices, ensuring consistency and availability across distributed systems.
- Set up and optimized Kafka brokers and Zookeeper ensembles to manage distributed messaging and ensure fault tolerance and high availability.
- Integrated Prometheus with Grafana to create comprehensive dashboards for visualizing metrics and performance data, enhancing operational awareness.
- Developed custom Grafana panels and visualizations to meet specific project requirements, including time-series graphs, heatmaps, and alert panels.
- Configured and managed a Continuous Delivery pipeline using AWS services Automated the build, test, and deployment processes with AWS CodePipeline, integrated with GitHub for source control and Amazon ECR for Docker image storage.
- Deployed and orchestrated containerized applications with Amazon ECS utilized for managing container clusters, ensuring efficient deployment of Docker images into production environments with seamless release management.
- Involved in using SonarQube for code review.
- Responsible for Continuous Integration (CI) and Continuous Delivery (CD) process implementation for databases using tools like Jenkins.
- Used Maven for project dependency management and Log4j for logging Involved in activities like code review, performance improvement and used JIRA for bug reporting.
- Project migration into cloud environment using Kubernetes, Docker container.

Environments: Java8, Mockito, REST, Spring (Boot,MVC), JWT, Microservices, Netflix Eureka, ORM Hibernate, Bash Scripting, Sybase, MYSQL, PL/SQL, AWS (S3, RDS, ECR, ECS), Jenkins CI/CD, Swagger, Postman, Docker, Git, JIRA.

Tata Consultancy Services

Oct 2021 – Aug 2022

Software Engineer

- Orchestrated the development of accessible and standards-compliant UIs using React.js, resulting in a 50% increase in user engagement through seamless integration with Spring Boot for REST API connectivity.
- Proficiently utilized React.js for creating dynamic and responsive user interfaces, leveraging JSX syntax and virtual DOM for efficient rendering, and managed application state using React hooks and Redux.
- Spearheaded the development of innovative functionality that significantly improved system performance, achieving a remarkable 70% reduction in time and effort dedicated to reviewing draft reports.
- Initiated optimization of MongoDB interactions using Mongo Template, resulting in a 40% reduction in query execution time, enabling faster data updates and retrievals.
- Developed Use Case Diagrams, Object Diagrams, and Class Diagrams in UML to model system requirements and design.
- Implemented classical Model-View-Controller (MVC) architecture using the Spring Framework for structured and maintainable application development.
- Utilized Spring Rest Template or Web Client to send HTTP requests and receive responses from microservices endpoints, ensuring reliable communication.
- Utilized Apache Kafka for log aggregation, monitoring, and event-driven architecture, facilitating scalable and resilient microservices communication through messaging and creating producers/consumers for APIs.
- Integrated Apache Kafka seamlessly with the Spring Kafka framework, leveraging the Spring ecosystem for streamlined development and configuration.
- Employed Spring Boot Actuators to expose endpoints for monitoring and managing microservices, including health checks, metrics, and application information.
- Built Docker images by writing Dockerfiles and configured Jenkins jobs to trigger deployment processes on AWS, integrating with AWS services such as Elastic Beanstalk, EC2, and Lambda for scalable and resilient application deployment.
- Set up and managed AWS ECS clusters for orchestrating Docker containers, ensuring efficient and scalable container management.
- Integrated EKS with AWS services including IAM roles for fine-grained access control, CloudWatch for

comprehensive monitoring and logging, and Elastic Load Balancing (ELB) for efficient load distribution.

- Connected AWS Lambda functions to services like API Gateway, S3 and SQS, enabling serverless application development and integration.
- Employed AWS CodePipeline, Code Commit, and CodeDeploy to construct Continuous Integration and Continuous Deployment (CI/CD) pipelines for automated code delivery.
- Implemented best practices for deploying Java applications on AWS, including setting up auto-scaling, load balancing, and monitoring solutions to ensure high availability and performance.
- Expertise in mocking dependencies and external systems using Mockito annotations for streamlined test setup, with integration of SonarQube for code quality analysis.
- Expertise in implementing parameterized tests for comprehensive testing of various input scenarios. Familiarity with JUnit annotations, such as @Test, @Before, and @After, for effective test case management.
- Utilized Postman for API testing and Git as a version control tool, ensuring efficient code management and collaboration.

Environments: Core Java, Junit, React.JS, RESTful, Spring MVC, Actuators, Kibana, Oracle, Mongo DB, Kafka, Elastic Beanstalk, AWS Lambda/SQS/CloudWatch, AWS CI/CD, Swagger, Postman, Sonar Cube, Docker, Git, Service Now.

Accenture

Jan 2019 - Oct 2021

Application Development Analyst

- Validated infotainment modules using Agile methodologies and Azure DevOps, effectively managing user stories and tracking progress to ensure timely delivery and high-quality outcomes.
- Developed Spring MVC applications and standards-compliant user interfaces using HTML, CSS, and JavaScript, incorporating REST APIs and implementing CRUD operations on MySQL databases for efficient data management.
- Used Angular to develop various Single Page Applications for making quick and incremental updates to UI of the application we used Built-in AJAX HTTP Service with observables.
- Worked with NPM package manager tools and created reusable templates using Angular directives.
- Engaged with Node.js for building server-side applications, leveraging its non-blocking I/O model to handle concurrent requests efficiently.
- Leveraged Node.js for real-time applications such as chat applications and live data feeds, using WebSockets for bi-directional communication between clients and servers.
- Implemented Servlets and JSPs for dynamic web page generation, enhancing user interaction and experience.
- Designed and implemented RESTful APIs using the Spring Framework, following RESTful conventions for GET, PUT, POST, DELETE, and UPDATE requests to facilitate seamless communication between services.
- Integrated SMTP server with JavaMail API for efficient email transmission and used Java Messaging Services (JMS) to send messages to queues for reliable and asynchronous information exchange.
- Managed transactions and concurrency in MySQL, utilizing transaction isolation levels and locking mechanisms to maintain data consistency and integrity in multi-user environments.
- Enhanced operational efficiency by optimizing SQL code for selective notifications based on factors like location, parts availability, and shipments.
- Utilized modern JavaScript features from ECMAScript 6 (ES6) and later versions, including arrow functions, template literals, de-structuring, and spread syntax, to write concise and maintainable code.
- Customized business templates in IBM Forms, tailoring formats to meet specific requirements and streamline workflow processes using Java Drools for business rule management.
- Configured and deployed applications on Apache Tomcat Application Server, ensuring a stable and scalable runtime environment.
- Utilized AppDynamics' advanced analytics and diagnostic tools to drill down into performance metrics, identify root causes of issues, and implement corrective actions.
- Supported UNIX requests for various applications and developed ANT scripts for building .war and .ear files, ensuring a systematic and efficient build process.
- Used SVN for version control and JIRA for issue tracking, ensuring effective management of code changes and project tasks.
- Leveraged Log4j for enhanced debugging capabilities, strategically embedding log statements with varying log levels (DEBUG, INFO, ERROR) to capture granular information during runtime.

Environments: Java SE 1.7, Servlets, JSP, JSTL, Azure DevOps, Eclipse, SVN, SOAP, WSDL, EJB, Hibernate, SQL, SQL Server, Apache Ant, Log4J.

EDUCATION

Bachelor Of Engineering in Computer Science, Osmania University (2015-19)

Master of Science in Computer Science, Rowan University (2022 –23)
