Summary

Experienced Data Analyst and Software Engineer skilled in data analysis, software development, and D365 ERP F&O performance optimization. Experience in Excel, SQL, Power BI, Python, and cloud platforms like AWS and Azure. Certified in AI, Data Analysis, and DevOps with a strong background in Agile methodologies and adept in thriving in both independent and collaborative environments. Currently on F-1 STEM OPT visa which is valid for two years from July 13 and does not require employer sponsorship during this period.

Experience

Vandoo LLC

July 2023 - September 2024

Data Analyst

Newark, NJ

- Implemented Oracle PL/SQL solutions including packages, procedures, functions, triggers, views, and exception handling for data operations, utilizing DDL and DML statements to manage table structures using Linux in Oracle 12c database.
- Scheduled a job in Unix to perform the following tasks 5 minutes after current time: find all running processes, determine disk usage, create and sort a file with 5 records, store them in another file, and display system status.
- Developed a password validation program using Python ensuring adherence to specified criteria, including lowercase and uppercase letters, numbers, special characters, and length constraints, enhancing security measures for user registrations.
- Provisioned and configured EC2 instances on AWS cloud platform, including launching and connecting to instances, as well as creating volumes and snapshots for data management and backup purposes.
- Worked on projects involving financial concepts including Forex, FIX, STP, SWIFT, brokerage accounts, shares, commodities, common stock, equity, face value, cash flow, currency forwards, and IPOs.

Sonata Software Ltd (Microsoft Vendor)

August 2018 - August 2021

Senior Systems Analyst

Bengaluru, India

- Performed full lifecycle implementations of Dynamics 365 Finance and Operations ERP, which included project planning, requirements gathering, design, configuration, testing, deployment, and post-go-live support.
- Translated customer requirements into technical specifications, integrating Agile, Waterfall and SDLC methodologies, and deployed test environments for performance testing using LCS (Lifecycle Services) TIE (Test Integration Environment) on Azure cloud.
- Conducted comprehensive performance testing and load testing using Visual Studio Load Test on Microsoft D365 ERP Finance and Supply Chain modules, including Accounts Payable, Accounts Receivable, General Ledger, Procurement and Sourcing, Master Planning, etc. Additionally, conducted performance testing for the Data Import and Export Framework in different environments running in VMs using Windows Operating Systems running on Hyper-V servers.
- Wrote SQL queries and developed tables, views, stored procedures, functions, triggers, joins, and indexes in T-SQL used in conducting performance testing in MS SQL Server.
- Improved ERP performance by over 20% through SQL Server by using query optimization through methods such as partitioning, parallel processing, plan guides and Query Store, and through performance analysis tools like Microsoft Dynamics Trace Parser and Azure Portal to analyze performance issues and monitor ERP performance.
- Expertise in Dynamics 365 configuration, workflow management, and customization, ensuring tailored solutions to meet specific business needs.
- Created, triaged and resolved bugs related to performance issues in Azure DevOps, providing detailed root cause analysis for developers, so that they could customize ERP code in order to resolve the issues.
- Provided insights about the ERP performance to stakeholders through dashboards, presentations and reports using Power BI, Excel and PowerPoint.
- Developed and customized code for the Watchdog application, written in C# and .NET, integrated with SQL queries through REST APIs in Visual Studio, to monitor and automatically mitigate various performance metrics such as CPU usage and memory utilization, while managing code changes using Git.
- Reduced the time taken to execute a portion of the performance testing process by around 50% by automating the installation of authentication certificate from certificate store and appending certificate thumbprint in XML configuration files as part of performance testing using PowerShell.
- Queried and analyzed large volumes of structured data using Kusto Query Language, in order to query and analyze performance metrics of the ERP during performance testing process, in order to identify performance bottlenecks.
- Reduced the time and effort required to execute the order-to-cash process for a single item in D365 F&O by automating it using X++, which is an OOPS language.
- Captured point-in-time images of databases using Azure containers and snapshot technology to apply data compression before storing database backups for future reference in Azure Blob Storage containers.
- Independently created comprehensive documentation for performance tests and analysis using Microsoft Word and Microsoft OneNote, demonstrating excellent attention to detail.

Volunteering/Part Time

CrowdDoing

February 2024- Present

Data Analyst

Remote

- As a data analyst volunteering for CrowdDoing's Nature Counter initiative, analyzed a dataset of different physical activities performed in different settings using Excel, SQL and Power BI (with DAX for data modelling and calculations), found performing outdoor activities in nature burns about 34% more calories per kilogram than other physical activities (1.64 cal/kg vs. 1.22 cal/kg), encouraging people to spend more time outdoors in nature.

Remotasks

January 2024 - March 2024

Software Engineer - AI Consultant

Remote

- Assessed software engineering prompt responses on Remotasks against predefined criteria like accuracy, relevance, coherence, verbosity, and safety and providing feedback to enhance the quality of LLM or AI bot in Remotasks platform.

Education

New York University

September 2021 - May 2023

MS in Computer Engineering (GPA - 3.4/4)

Brooklyn, NY

Relevant Coursework: Probability and Stochastic Processes, Internet Architecture and Protocols, Data Structure and Algorithms, Introduction to Machine Learning, Deep Learning, Principles of Database Systems, Introduction to Java

National Institute of Technology Karnataka, Surathkal

August 2014 - May 2018

Bachelor of Technology in Electronics and Communication Engineering

Mangaluru, India

Projects

Gesture based interaction for computer operations | *Python, Machine Learning, OpenCV, MediaPipe, Autopy* | [Link](#)

- Implemented virtual control modules for zoom, volume, mouse, and PowerPoint slides navigation using hand gesture detection.

Real-time driver drowsiness detection | *Python, Pandas, Numpy, OpenCV, JavaScript* | [Link](#)

- Implemented drowsiness detection using eye tracking, OpenCV, and JavaScript, with alarm triggering functionality.

Banking Facility Availability Prediction with ML | *Python, Pandas, Numpy, Scikit-Learn, TensorFlow* | [Link](#)

- Created ML models to predict loan repayment, customer satisfaction, and credit default probabilities for banks.

Image cartoonification and caption generation | *Python, NLP, Computer Vision, Keras, OpenCV, TensorFlow* | [Link](#)

- Applied OpenCV filters for image cartoonification and used LSTM RNN with VGG-16 features for caption generation.

Brickbreaker game | *Java, JDBC, MySQL, GUI, Network connectivity(TCP/IP), Multithreading* | [Link](#)

- Developed a brickbreaker game with different levels, user score storage using JDBC and MySQL, and multiplayer functionality.

Social Media Content Data Analysis | *Data Analysis, Microsoft Excel, VLOOKUP, Microsoft PowerPoint* | [Link](#)

- Analysis identified travel, science, and healthy food as top Social Buzz categories. To enhance user engagement, scaling the platform in August and May with factual and healthy eating posts could be effective.

Discovering NASA Astronauts | *Python, SQL, Microsoft Excel, Data Analysis, Data Cleaning* | [Link](#)

- Prepared NASA astronaut data with Python and extracted valuable insights using SQL, uncovering insights on status, military ties, gender distribution, life expectancy, majors, education, geography, and spaceflight experience for around 350 astronauts.
