

GEETH SANDEEP YEMINEDI

Cloud Engineer

☎ (331)-246-3380 | ✉ sandeep@jobtechmail.com |  LinkedIn

SUMMARY

Cloud Engineer with 3+ years of experience in designing scalable, compliant cloud solutions on AWS and Azure. Enabled service availability improvements, operational cost reductions and cybersecurity incident decreases through innovative DevOps practices, data analytics platforms, and proactive incident response. Demonstrated success in collaborating cross-functionally to deploy mission-critical applications and engineer secure, high-performing cloud environments.

SKILLS

Methodologies: Agile, SDLC, Waterfall

Programming and Scripting Languages: Python, SQL, Java, JavaScript, Bash, PowerShell

Database Management: MySQL, PostgreSQL, MongoDB, Elasticsearch

Cloud Platforms: AWS (EC2, S3, RDS, Lambda, Amazon Elastic Container Service, beanstalk), Microsoft Azure (Azure Functions, Azure SQL Database), Google Cloud Platform (GCP), IaaS, PaaS

Infrastructure as Code (IaC): Terraform, AWS CloudFormation, Azure Resource Manager (ARM) Templates

Containerization and Orchestration: Docker, Kubernetes

Automation and Configuration Management: Ansible, Chef, Puppet

Monitoring and Logging: Amazon CloudWatch, Azure Monitor, Prometheus, Grafana

Networking Fundamentals: TCP/IP, IP Configs, DHCP, Virtual Private Clouds (VPCs), Load Balancing, DNS Management

Security: Identity and Access Management (IAM), AWS Security Hub, Azure Security Center, Network Security Groups/Firewalls

DevOps and CI/CD: Git, GitHub/GitLab, Jenkins, Azure DevOps

Soft Skills: Strong problem-solving abilities, Effective communication skills, Team collaboration experience, Adaptability

EDUCATION

Master of Science in Information Technology and Management

April 2024

Indiana Wesleyan University, Marion, IN

Bachelors of Business Administration

October 2021

Acharya Nagarjuna University, Guntur, India

WORK EXPERIENCE

Cloud Engineer | PNC Financial Services, Chicago

August 2023 – Current

- Designed scalable cloud infrastructure solutions on the **AWS** platform, leveraging IaC tools like **Terraform** and **CloudFormation**, to modernize PNC's mission-critical financial applications, increasing system uptime and reduction in operational costs.
- Collaborated with development teams to deploy and optimize cloud-native applications, utilizing **Docker** and **Kubernetes** for containerization, and implemented CI/CD pipelines using Jenkins and Azure DevOps, improving service availability by 45% and reducing user-facing incidents.
- Played a key role in developing a "Policy-as-Code" service that automated compliance checks for code deployments, reducing the time required for regulatory reviews from 37 days to near real-time and ensuring adherence to SDLC standards. Also applied **IAM** and **AWS Security Hub** to enhance data security and governance across the organization.
- Engineered robust disaster recovery strategies, including multi-regional data replication and failover mechanisms using **Amazon CloudWatch**, to safeguard against service disruptions and data loss, exceeding the organization's recovery time objective of 4 hours by 25% and successfully validating the strategies through simulated disaster testing.
- Leveraged monitoring and logging tools, including **Amazon CloudWatch** and **Grafana**, to proactively identify and address performance bottlenecks in the cloud infrastructure, contributing to a 20% reduction in cybersecurity incidents by quickly remediating vulnerabilities and optimizing network configurations.

Cloud Engineer | Citus Infotech, India

January 2021 – October 2022

- Implemented **Azure-based**, HIPAA-compliant infrastructure solutions using **Terraform** and **Azure Resource Manager Templates** to modernize mission-critical healthcare applications such as electronic medical records and patient portals, resulting in a 30% improvement in system availability and reduced operational costs.
- Collaborated cross-functionally with software development teams to deploy and optimize cloud-native healthcare applications, utilizing **Docker** and **Kubernetes** for containerization, and deployed CI/CD pipelines using **Jenkins** and **Azure DevOps**, improving deployment efficiency and reducing time-to-market for new features based on feedback from development stakeholders.
- Developed a cloud-based data analytics platform that enabled healthcare researchers to leverage big data insights, improving clinical outcomes through data-driven decision-making, such as early disease detection and personalized treatment plans, while ensuring compliance with patient privacy regulations through the implementation of **IAM** and **Azure Security Center**.
- Engineered secure telehealth solutions hosted on the cloud, including features like virtual consultation rooms, remote patient monitoring, and electronic prescriptions, ensuring compliance with HIPAA regulations and utilizing **Azure Monitor** and **Grafana** for proactive performance monitoring, leading to a 50% increase in patient satisfaction scores.
- Provided technical support and incident response for cloud services, proactively identifying and addressing performance bottlenecks or security threats using **Ansible** and **Prometheus**, reducing unplanned downtime and improving mean time to resolve incidents, maintaining uninterrupted access to critical healthcare applications.
