

Geetha Boggula

QA Automation Engineer

📞 943-300-6048

✉ boggula.geetha3@gmail.com

OBJECTIVE

To leverage my **5+ years** of experience as a QA Automation Engineer in contributing to innovative projects where I can utilize my expertise in automated testing frameworks, scripting languages, and quality assurance methodologies to enhance product quality, streamline processes, and drive continuous improvement.

EDUCATION

Auburn University at Montgomery, Alabama, USA

RELEVANT SKILLS

- **Languages:** HTML5, XML, CSS3, PL/SQL, C, C++, Java, J2EE, JavaScript, Python
- **Testing Tools:** Selenium WebDriver/RC/IDE/ GRID, QTP, HP QC, ALM, Junit, JMeter, Cypress, Playwright, Jenkins, JIRA, Cucumber, SoapUI, Rest API, Appium, Postman, Test Complete
- **Build & CI Tools:** Ant, Maven, Jenkins, Hudson, Cruise Control
- **Methodologies:** Agile-Scrum, Waterfall, TDD
- **Mobile Testing Tools:** APPIUM, Perfecto Mobile
- **Bug Tracking Tools:** HP ALM/Quality Center, JIRA
- **Version Control Tool:** GIT, Subversion (SVN)
- **Database Tools:** SQL Server, MS Access, Oracle, MySQL
- **Operating Systems:** Windows variants, UNIX, Mac

PROFILE SUMMARY

- **5+ years** in Manual and Automation testing as well as hands-on experience working in Development & Testing Methodologies such as **Agile**, experience in testing with extensive knowledge of Automation Framework Design & Implementation using the **Selenium Tool**.
- Conducted Data Validation Testing (back-end) using **SQL** queries.
- Proven ability in developing **BDD/TDD scripts** with **Cucumber** and writing step definitions for behavior.
- Extensively automated **Regression** and **Functional test** suites by developing test cases and test suites using **Selenium WebDriver**
- Experience in **API manual** and **automation testing** using **Postman**
- Find, isolate, document, regress, and track bugs through resolution via **Jira**. Identifying objects of App using **UI Automator**, **Appium Inspector** tool for **Android** and **Xcuitest driver** for **ios** based devices.
- Performed functional testing to identify various critical points in the application and automated it by using **WebDriver IO** with **Mocha** frameworks for **Java Script**. Involved in solving **EDI** issues on production and monitor & document **EDI** request to solve issues appropriately.
- Performed **Web Services** Testing and **XML** validation by creating test case suite using **REST ASSURED**. Used **CSS** Selector to identify objects.
- Performed **API Level testing** for web services, enhanced the Test harness and developed many Test suites using **XML** and **Python**.
- In depth understanding of **Agile (Scrum)** and Waterfall methodologies to adapt goal-driven, fast-paced, and high-pressure environments.
- Experience in authoring load, performance, and endurance test scripts in **LoadRunner**. Responsible for implementation of **Hybrid Test Automation** Framework build using **Selenium WebDriver**, **TestNG** and **Maven** technologies under **Java** platform utilizing industry leading harness design patterns and approaches.
- Extensive experience in developing scalable and reliable **Serverless** architectures using **AWS Lambda**. Experience in developing **C++ services** using web services architecture, **SOAP**, **WSDL** and **XML**.
- Used **Maven**, **Selenium Grid** to execute **Selenium** automation suites on different platform, browser combinations in parallel.
- Hands-on experience on **Playwright testing** for end-to-end test framework for **AngularJS** applications and other **JavaScript** applications.
- Responsible for defect tracking, defect reporting and defect reproducing. Used **Jenkins** to configure with **GitHub** and **Maven**. Used **WebDriverWait**, **wait.until**, Expected Condition. Visibility of Element Located is Element Present or check status completed to handle the Ajax content.
- Experienced in writing Test Cases and Test Scenarios using **TestNG** for Test Driven Development (**TDD**) and **Cucumber** for Behavioral Driven Development (**BDD**) Frameworks. Involved in system integration and user acceptance testing (**UAT**) on later stages of **SDLC**. Worked with manual testing and automated test cases of different application on **Windows** Environment. Hands-on experience on working **Cypress** for angular application end to end testing.

RELEVANT EXPERIENCE

QA Automation Engineer Invesco

//
//

Apr 2024 - Present
Atlanta, Georgia, USA

Invesco Ltd. is an American independent investment management company. I design, develop, and maintain automated test scripts using tools like Selenium, Cucumber, or Appium to ensure thorough coverage of key functionalities in web and mobile applications.

Key Responsibilities and Achievements:

- Responsible for creating test scenarios for user stories and creating automation test suites using **Python, Selenium WebDriver**, and **Pytest framework**. Played a key role in production releases and perform **UAT** test of the system.
- Design and execute features of **ATDD** (Acceptance Test Driven Development)/**BDD** using **Selenium, Cucumber** for **Java**, and **Ruby**. Creating core **Python API** which will be used among all modules.
- Performed Regression testing on new builds, every modification in the application using **Selenium WebDriver**.
- Automation of **API's** using **Postman** and **REST ASSURED**, Automated the **API's** in **Postman** using **JavaScript**.
- Created and updated test cases in **Excel** sheets and generate **Traceability Matrix**. Performed the **Manual Testing** of the application before switching over to the automation phase. Involved in **UAT** Testing and Used **Quality Center** to report bugs. Involved in **REST APIs** based web services testing using **REST Assured** web services testing tool.
- Assisted Manager by providing automation strategies, **Selenium, Cucumber** Automation and **Jira** reports.
- Improved the front-end **JavaScript** functionality to provide a better user experience.
- Basic understanding/experience with **Docker** and/or **Kubernetes** or other container orchestration
- Developed the Automation Framework from scratch and enhance it by using **Selenium WebDriver, JUnit, Cucumber, Maven, Java, GitHub**. Designed and implemented **Cucumber, Appium, Maven** and **Java** based Framework from scratch.
- Executed **REST APIs** based web services **API testing** (**Java** client and **REST APIs**).
- Actively participated in **Agile Scrum** development including Sprint Planning, Daily Scrum, Backlog refinement, and Retrospective meeting. Worked in **DevOps**, installing, configuring, and integrating Automation scripts on Continuous Integration tools (**CI/CD**) like **Jenkins** for nightly test suite execution and working on knowledge on testing and configuring Amazon Web services (**AWS**).
- Using **Gherkins** language to test the behaviours of the Application (**BDD**) using **Cucumber** with **JUnit, Maven, Selenium**, and **Java** language.
- Worked extensively with Business and User Acceptance Testing resources to cover all functionality of System Integrated Testing and End to End Regression testing using the **SoapUI** tool.
- Developed and implemented robust **MVC** Pattern base testing with **Selenium WebDriver** which cut down the script development time in half. Experienced with testing **REST** and **GraphQL API** logic using **Postman**.
- Prepared Requirement Traceability Matrix (**RTM**) to trace test cases to functional requirements.
- Worked with manual testing and automated test cases of different application on **Windows** Environment.
- Experienced in load and performance testing tools **JMeter**, and **LoadRunner**. Wrote tests using **Java** web applications. Web controls testing - wrote automation to test the controls from end to end starting with invoking in Internet Explorer.
- Developed test cases in **Gherkins** and implemented cucumber to automate them.
- Designed and developed Webservice test automation using **Soap UI** and **Rest Assured**. Utilized **AWS Lambda** functions to perform serverless computing for test data generation and validation, reducing infrastructure costs by 30%.
- Involved in **SOA testing** for **Payments API's** using **REST ASSURED** and **Java** framework for web services testing.
- Assisted and mentored the other testers with technical issues and automation scripts.

Environment: Agile, API testing, API Testing, Appium, ATDD, BDD, C, Cucumber, Cypress, Gherkins, Git, Java, JavaScript, Jenkins, JUnit, LoadRunner, Maven, Playwright, Postman, Python, REST Assured, REST ASSURED, Ruby, SDLC, Selenium, Selenium WebDriver, SoapUI, TDD, TestNG, UAT, XML

QA Automation Engineer Regions bank

//
//

Apr 2023 - Mar 2024
Atlanta, Georgia, USA

Regions Bank QA ensures secure, reliable, and user-friendly banking services through rigorous testing of digital platforms, core services, and regulatory compliance.

Key Responsibilities and Achievements:

- Worked on project building tools like **Maven** in adding dependencies by maintaining in pom.xml file.
- Updated **Test Plans** and **Test Cases** periodically to manage changes in requirements.
- Developed and executed test scripts using **Playwright** to validate the functionality and usability of web applications.
- Responsible for defect tracking, defect reporting and defect reproducing. To create maven automation project for website (**Eclipse**) or mobile app (**Appium**) from the scratch.
- Involved with working in all phases of **SDLC** methodologies. Responsible for implementation of **Hybrid Test Automation Framework**, **Page Object Model** using **Selenium** WebDriver, **TestNG** and **Maven** and **Java**
- Implemented Automated execution of tests (nightly and need based) using **Maven** and **Jenkins**.
- Involved in writing automation scripts for mobile native applications using **Appium**, **Core java** and **Selenium**.
- Implemented **Maven** for Project building, and **Git** for code management repository.
- Performed **API Level testing** for web services, enhanced the Test harness and developed many Test suites using **XML** and **Python**. Automated test cases using Cypress/ writing and running automation test scripts
- procedures by utilizing advanced tools and techniques. Expertly handled **Postman** and **SoapUI** for manual testing and implemented **Rest Assured Java** Library for efficient **Automated API Testing**.
- Test automation for web application (**SWAP module**) using **Cucumber**.
- Used Jira for bug tracking and reporting, also followed up with development team to verify bug fixes and update bug status. Experienced in testing applications manually as well as using automated testing tools like **Quality Center/ALM**.
- Proficient with testing **REST APIs**, **Web & Database testing**. Performed functional testing to identify various critical points in the application and automated it by using **WebDriver IO** with **Mocha** frameworks for **Java Script**.
- Performed **GUI**, **Functional** and **Regression testing** by automated using **Selenium**, **JUnit**, **Ant**, and **Jenkins**.
- Extensive experience in Web Services, **SOAP**, and **REST API Testing** using **UFT API**, **Restful API**, **RestSharp**, **Parasoft SOA**, **Apache JMeter**, **Postman**, and **SoapUI**.
- Followed **Agile** testing methodology, participated in daily **SCRUM** meetings and testing each **SPRINT deliverables**.
- Participated in building **TestPlans**, defined Test Scenarios, and developed Test Cases corresponding to the test requirements to maximize the verification coverage of system variables.
- Implemented Wireless Handset Automation framework, scripting & execution **Sanity**, **Regression**, **Stress & Boundary test** cases for mobile applications on Android, **Apple**, **RIM**, **BREW & WinM** platforms on various Blackberry, iPhones & iPads using **Device Anywhere Automation Tool**.

Environment: Agile, API Testing, Appium, BDD, C, C#, CI/CD, Cucumber, Cypress, Java, JavaScript, Jenkins, JUnit, LoadRunner, Maven, POM, Postman, POSTMAN, Python, Quality Center/ALM, Ruby

QA Analyst

//

Jul 2020 - Nov 2022

(Cognizant)Sanofi

//

Hyderabad, India

Sanofi S.A. is a French multinational pharmaceutical and healthcare company. I identified, documented, and tracked the defects using tools like JIRA, Bugzilla, or Azure DevOps. Communicate issues and collaborate with cross-functional teams to resolve them.

Key Responsibilities and Achievements:

- Used Protractor for end-to-end test frameworks for AngularJS applications. Generating test cases using **TestNG** and **BDD (cucumber)**. As a member of the Scrum team participated in daily standup meetings, project status meetings as well as retrospective meetings and iteration reviews.
- Integrated Automation scripts (**Selenium WebDriver API**) in Continuous Integration tools (**Jenkins**) for nightly batch run of the Script. Created Project plan on **Jenkins**, configured scheduled using **Cron job**.
- Using **Postman** validated **REST API** Web Service Call by sending **JSON Request** and **JSON Response**.
- Prepared **UAT** Test reports indication clearly the areas of Risk, Recommendation.
- Created tractability matrices, test plan and bug reports and other test related documents. Performed **Manual Testing** to check the flow of the application. Uploaded test cases executed test cases and logged defects in Jira.
- Executed the Test Cases and Test Scripts by using Quality Centre. Performed manual test case execution for **REST API** using **SOAP-UI**. Proficient in **JavaScript** libraries such as **D3.js** integrating them with **React.js**

- Responsible for DEVOPS server (Ansible tower, Docker, PostgreSQL & Webservices) monitoring and performance through SPLUNK. Developed **BDD** and **TDD** script with **Cucumber** and written step definition for Gherkin based features.
- Selected the Test Cases to be automated and performed functional testing of the front end using **Selenium (IDE and Web Driver)** & created **Data Driven framework** using **JUnit**. Used **Postman** for **API testing** to verify the **CRUD** operations.
- Created Load Runner Scenario utilized user scripts into real Performance Test, utilized different Load Runner monitoring tools, identified bottlenecks and analyzed the performance of Application Server and Database Server.
- Created Automation framework for Frontend AngularJS testing using **Protractor** and **Cucumber/Chai libraries**
- Developed automation scripts to test storage appliances in **Python**.

Environment: SDLC, Selenium, Selenium Web Driver, Selenium WebDriver, STLC, TestNG, UAT, XML, BDD, TDD, Python, JUnit, API Testing, Agile, API testing, Appium, BDD, C, CI/CD, CSS, Cucumber, Cypress, Git, HTML, Java, JavaScript, Postman, POSTMAN, REST Assured, SDLC, Selenium, Selenium WebDriver, SOAP, SOAP UI, STLC, TestNG, UAT, XML

Software Test Engineer Wells Fargo

//
//

**Jun 2019 - Jun 2020
Hyderabad, India**

Wells Fargo & Company is an American multinational financial services company with a significant global presence. I conducted the performance and load testing using tools like JMeter or LoadRunner to ensure applications can handle expected traffic volumes without compromising performance.

Key Responsibilities and Achievements:

- Used **Firebug** and **XPath** for the web-based application testing with selenium for the commands and locator application.
- Develop **DI jobs** and transformations for data preparation and storage in **AWS Redshift** to prepare data for machine learning. Java programming to build automation test scripts. Worked on **Automation Tool** for the Application using **UFT Tool**. Responsible for providing a regular status report to the upper management.
- Good working knowledge of major Operating Systems such as **Windows** and **Mac OS**. Configured **Selenium Web-Driver**, **TestNG**, **Maven** tool and created selenium automation scripts in java using **TestNG** prior to agile release.
- Worked with the development team to understand technical design and architecture for test planning.
- Upgraded a legacy **Java** based Jbehave framework to a modern **Playwright** Framework, ensuring alignment with business requirements. Designed, implemented, and thoroughly tested the new framework.
- Implemented open-source tools **Appium**, and **Selenium Web Driver** for cross-browser and cross-platform.
- Worked closely with other members of the development team through the full systems lifecycle including requirements Capture, Design, Development, Testing, and Deployment. Developed Test Framework in **Selenium** for UI Regression Test Automation and implement testing framework in **Jenkins** for Continuous Integration.
- Developed a page object model framework using **Java**, **Selenium WebDriver API**, **Test-NG**, **Maven**, and **Jenkins**.
- Used **Appium** tool to be tested automation test scripts on both **IOS** and Android platforms for native and mobile websites on mobile devices. Used **Git** as repo for version control. Worked with merge conflicts.
- Created automation scripts using new framework with **CYPRESS tool**. Implemented Continuous Integration and Continuous Deployment (**CI/CD**) using **Jenkins** for running the **Smoke Test** on a nightly basis automatically.
- Developed modular & robust automation framework using **Selenium WebDriver**, **Cucumber**, **TestNG** and **Java**.
- Analyzed business requirements, documented business requirements specifications, wrote **Test Plans and Test Cases**.
- Extensively involved in identifying test cases to automate. Automate those test cases using **Selenium WebDriver**, **JUnit**, and **Java (Eclipse IDE)**. Involved in Webservices Testing using the **Soap UI tool**. Validated request and response **XML**.

Environment: API testing, Appium, BDD, C, CI/CD, Cucumber, CYPRESS, Firebug, Git, IDE, Java, JavaScript, Jenkins, JUnit, Mac OS, Maven, Playwright, Postman, Python, Selenium, Selenium Web Driver, Selenium WebDriver, SOAP, SQL, TDD, TestNG, UAT, UFT, Windows, XML, XPath
