SUMMARY

Software Engineer with 2+ years of experience in Python backend development, building scalable APIs and web applications using FastAPI, Flask, and Django. Skilled in database optimization, microservices, CI/CD, and cloud infrastructure (AWS, Docker), delivering high-performance, maintainable solutions. Hold a Bachelor's degree.

EXPERIENCE

Software Engineer

12/2023 – Present

LeadHit San Francisco, CA

A B2B company providing online marketing tools for e-commerce. Their platform tracks user behavior on client websites to enable targeted and bulk email campaigns, personalized product recommendations, and on-site engagement widgets

- Drove a 9% reduction in infrastructure TCO through comprehensive optimization: consolidated critical logic by routing legacy Celery tasks to the new Dramatiq service via API, and streamlined data storage by deduplicating elements across 4 redundant structures and pruning non-utilized indexes.
- Accelerated bulk email generation by 88%, cutting end-to-end job time from 45 min -> 10 min through schema redesign and optimized batching algorithms.
- Migrated a Django + Celery monolith to a service-oriented stack using Flask, FastAPI, and Dramatiq, improving request throughput by ~35% and enabling independent deployment pipelines.
- Optimized database queries and algorithms through profiling and selective indexing, improving system response time by ~35% and supporting higher user concurrency.
- Cut production and user-reported issues by ~40% by refactoring a codebase and implementing robust error handling.

PROJECTS

- [ArtBrut.co.ua](#) - social-impact web platform for artists with mental disabilities.

Self-initiated full-stack project; acquired by a major healthcare organization

- Launched a socially-driven platform showcasing artworks by psychiatric clinic patients, with all proceeds donated to support the institutions.
- Architected and developed the full-stack solution using Django, PostgreSQL, and Docker, deployed on a low-cost cloud (<\$500 total project cost) and designed for scalability.
- Promoted the platform via organic channels, including Meta groups and Google Maps listings, drawing attention from well-known medical organizations within 3 months.
- Secured a 6-figure investment/acquisition from a major healthcare organization within 6 months, leading to full integration of the platform into their operations.
- Managed technical operations, including database maintenance, Docker deployment, and performance optimization for growing traffic.
- [Backyard Bridge](#)
An online version of a popular multiplayer card game in Kyiv, Ukraine.

SKILLS

- Languages & Frameworks: Python, JavaScript, Flask, FastAPI, Django, Aiogram, HTML, CSS
- Backend & System Design: REST API, WebSockets, RabbitMQ, Celery, Microservices, API Design, System Design,DDD, SOA, Design Patterns, Clean Architecture, End-to-end delivery
- Databases & Infrastructure: PostgreSQL, MongoDB, Redis, SQLite, Docker, CI/CD, Git, Linux, Nginx, AWS, Azure, Serverless
- Methodologies & Principles: Agile, Scrum, OOP, SOLID, TDD, Unit Tests, RESTful API

EDUCATION

Bachelor's degree

2006 – 2011

Irpin PC of NULES of Ukraine

Kyiv, Ukraine
