SUMMARY

Software Engineer with 5+ years of hands-on experience in Java development, focused on building and supporting high-performance backend systems for real-world applications. Experienced in designing clean, scalable services and gradually expanding expertise into AI-driven features and intelligent automation, using Python for data handling and AI workflows. Known for writing maintainable code, understanding business requirements, and collaborating effectively with cross-functional teams to deliver reliable, practical, and impactful software solutions.

SKILLS

Programming Languages: Java (Core Java, Java 8+), Python (basic for automation), SQL, Bash, JavaScript, TypeScript

Backend Development: Spring Boot, Spring Security, Flask, Node.js, RESTful API Development, Microservices Architecture

Frontend Technologies: React.js, MaterialUI, HTML5, CSS3

Data & Analytics: SQL Queries (Joins, Window Functions), Python-based ETL, Data Modeling, Machine Learning Basics (scikit-learn), Metrics and Dashboard Development

Object-Oriented Design: OOP Principles, Design Patterns, Modular Code Design

Databases: SQL, MySQL, PostgreSQL, Database Design, Query Optimization

Cloud & DevOps Tools: AWS (EC2, S3), Jenkins, CI/CD Pipelines

AI & Intelligent Systems: AI Feature Integration, Model Integration, Data Processing, AI API Consumption

Tools & Technologies: Git, Maven, Gradle, CI/CD Basics, Docker (basic), Linux

Testing & Quality: JUnit, Unit Testing, Debugging, Code Review, Performance Optimization

Development Practices: Agile/Scrum, SDLC, Version Control, Code Quality Standards

EXPERIENCE

Cigna Healthcare, Software Engineer

Aug 2025 – Present

Dallas, TX

- Built and maintained 8 RESTful services in Java and Spring Boot, defining clear API contracts and versioning to support 11 business modules handling 1.4M requests monthly with 99.9% uptime.
- Modeled data in MySQL and PostgreSQL while creating optimized queries for reporting and validation, improving aggregation performance by 37% across 3 major analytics dashboards.
- Deployed microservices through Jenkins pipelines integrated with Docker containers, reducing deployment time from 25 minutes to under 8 minutes and eliminating manual intervention in 95% of cases.
- Authored Postman collections and OpenAPI documentation for 10 core APIs, raising integration accuracy by 22% and reducing onboarding time for new developers by 30%.
- Designed observability using structured logs and Grafana dashboards, defining 12 service metrics that cut mean time to recovery (MTTR) by 41% during incident triage.
- Developed Node.js utilities to automate test execution and log parsing, shortening local debugging time by 28% and supporting React and Angular teams with stable API endpoints.

JPMorgan Chase & Co., Software Engineer Intern

Dec 2024 – May 2025

Dallas, TX

- Developed 5 Java Spring Boot APIs for real-time transaction processing handling 2.8M requests daily with under 200 ms latency, while managing versioning and Git workflows for consistent releases.
- Constructed 7 Python- and SQL-based ETL workflows automating batch data refreshes from 4 sources, improving reliability by 35% and reducing manual reconciliation by 20 staff hours monthly.
- Refined SQL queries and stored procedures in MySQL and PostgreSQL, lowering query execution time by 46% and enhancing overall database throughput for 3 internal finance systems.
- Deployed containerized microservices using Docker on AWS EC2 with S3 for object storage, increasing deployment consistency by 32% and ensuring full environment parity across stages.
- Authored Jenkins pipelines and Postman regression suites supporting 3 testing tiers, reducing integration defects by 27% and enabling automated verification before each release.
- Used MongoDB for rapid prototype creation and ad-hoc operational analytics, collaborating with analytics teams to define 10 KPIs visualized in internal dashboards tracking system performance.

Citius Tech, Software Developer
Hyderabad, India

Jan 2021 – Jul 2023

- Delivered 9 Spring Boot microservices enabling real-time data exchange between 4 healthcare platforms, handling over 2.5M transactions monthly while maintaining 99.8% service uptime and sub-250 ms response time.
- Reconstructed 30+ SQL queries with indexed joins and partitioned tables, improving reporting speed by 63% and lowering overall database load by 18% across multiple high-traffic modules.
- Designed user authentication and authorization framework in Spring Security for 3 enterprise tools, supporting 500+ clinicians and administrators with secure, role-based access control.
- Configured CI/CD pipelines using Jenkins and Maven for 5 production services, shortening release cycles from 10 days to 3 days and reducing manual deployment errors by 42%.
- Refined internal data models and REST API payloads to remove redundancy, cutting average response size by 19% and improving downstream analytics processing time by 28%.
- Collaborated with 6 engineers and QA specialists to stabilize ETL workflows written in Python, achieving 97% data accuracy during nightly batch processing across multiple hospital data systems.

Hexaware Technologies, Software Developer
Hyderabad, India

Jul 2019 – Dec 2020

- Designed Python Flask services integrated with PostgreSQL, exposing 12 REST endpoints for fraud detection workflows processing over 4M daily transactions with 99.8% reliability and consistent sub-300 ms response times.
- Built React.js dashboards and collaborated on Angular-based admin panels linked to backend APIs, providing near real-time reporting that reduced manual fraud audit time by 38%.
- Authored 25+ SQL queries using window functions and CTEs while optimizing indexes, achieving a 52% reduction in query latency across 3 core database schemas.
- Decomposed 2 legacy monolith systems into 10 containerized microservices deployed on AWS EC2, cutting deployment time by 45% and improving scalability for cross-region workloads.
- Partnered with 3 data scientists to integrate baseline machine learning models in scikit-learn, improving anomaly detection precision by 21% and enriching fraud investigation outcomes.
- Practiced object-oriented principles and modular design patterns across 14 components, reducing maintenance overhead by 33% and ensuring consistent code readability across development teams.

EDUCATION

Master's in Computer and Information Sciences
University of North Texas | Denton, TX

Aug 2023 – May 2025

Bachelor's in Computer Science and Engineering
BV Raju Institute of Technology | Medak, Telangana, India

Aug 2015 – May 2019
