SUMMARY.

Data Analyst with almost 4 years of experience leveraging Python, SQL, and advanced analytics to drive business intelligence and operational efficiency. Expertise in ETL pipeline development, predictive modeling, statistical analysis, and data visualization delivering actionable insights. Proficient in Tableau, Power BI, cloud platforms, and regression techniques for comprehensive data mining and strategic decision-making support.

SKILLS

Methodologies: SDLC, Agile, Waterfall

Programming Languages: Python (Pandas, NumPy, SciPy, Matplotlib, Seaborn, TensorFlow), SQL, R

Database: Microsoft SQL Server, PostgreSQL, MySQL

Data Visualization Tools and Platforms: Tableau, Power BI (with Copilot AI), Microsoft Excel (Advanced)

Statistical Analysis: A/B testing, Descriptive Statistics, Predictive Analytics, Hypothesis Testing, Regression Analysis, Time Series Analysis, Exploratory Data Analysis, Trend Analysis

Cloud Platforms: AWS (S3, EC2, Redshift), Microsoft Azure, Snowflake

ETL Tools: Alteryx, Talend

Big Data Technology: Hadoop, Apache Spark, Apache Kafka

Version Control: Git, GitHub

Soft Skills: Critical thinking, Problem-solving, Attention to detail, Communication Skills, Team Collaboration, Stakeholder Management

EDUCATION

Master in Computing and Information Systems

May 2024

Youngstown State University, Ohio

Bachelor of Technology in Electronics and Communication Engineering

September 2021

Sree Dattha Group of Institutions, India

PROFESSIONAL EXPERIENCE

Data Analyst | Cardinal Health, Ohio

January 2024 - Current

- Built **Python ETL pipelines** processing 500K patient records weekly from EHR system, reducing pharmacy inventory discrepancies by 34% through automated data validation and cleansing protocols.
- Developed **SQL-based** readmission risk models analyzing 18-month patient data, achieving prediction accuracy that helped clinical teams reduce 30-day readmissions by 12% across facilities.
- Created **Tableau** executive dashboards consolidating clinical data, identifying \$450K in duplicate pharmaceutical orders through cross-referenced inventory analysis and vendor comparisons.
- Conducted **A/B testing** on medication adherence protocols using **Python** statistical libraries, measuring patient compliance rates that improved chronic disease management outcomes by 19% quarterly.
- Migrated legacy reporting to **Azure Snowflake** infrastructure, enabling real-time analytics that reduced monthly financial reporting cycles from 72 hours to 8 hours processing time.
- Applied **regression analysis** on insurance claims patterns using **R**, detecting billing anomalies through statistical outlier identification that prevented \$180K in fraudulent reimbursement requests annually.

Data Analyst | Sage Softtech, India

August 2020 - July 2022

- Automated **MySQL** data integration using **Python APIs** for 6 banking clients, processing 85K daily transactions while reducing data sync errors by 41% through validation scripts.
- Built customer churn prediction models using **Python ARIMA analysis** on transaction histories, achieving accuracy that helped retain 240 high-value accounts worth \$890K.
- Designed **Power BI** executive dashboards with **DAX** calculations for portfolio risk assessment, enabling investment managers to identify opportunities generating 22% returns on 4 products.
- Enhanced fraud detection algorithms using **logistic regression** in **Python**, analyzing transaction patterns that reduced false positives by 38% while maintaining fraud identification accuracy rates.
- Implemented **Alteryx** data quality workflows processing 200K records daily, eliminating manual verification tasks that saved 15 analyst hours weekly through automated validation rule engines.
- Developed customer segmentation models using **Python clustering algorithms** on demographic data, identifying 3 profitable segments that increased targeted marketing conversion rates by 28%.
- Participated in **Agile** and **SDLC** project teams using **Git** for **version control**, collaborating with business analysts to refine data models and ensuring continuous process improvement for efficient project delivery.
