

Kura Jaya Prakash | Software Engineer

IL, USA | +1 (314)-220-9051 | jayaprakashk0507@gmail.com | [LinkedIn](#)

SUMMARY

Software Engineer with 5+ years in **Java, Spring Boot, React.js**, and **AWS/GCP**. Skilled in developing **microservices architectures** and **REST APIs**, optimizing cloud applications, and implementing **CI/CD pipelines**. Proven ability to improve system performance, reduce operational costs, and ensure high-quality code through automated testing. Strong background in **Agile methodologies**, fostering cross-functional collaboration to meet project deadlines. Committed to building scalable, robust, and efficient software solutions.

SKILLS

Programming & Scripting Languages: Java, Python, JavaScript (ES6+), TypeScript, and C#, with strong SQL knowledge proficient in HTML5, CSS3, and responsive UI development.

Frameworks & Libraries: React.js, Angular, Node.js, Express.js, Spring Boot, and .NET Core, applied RESTful and microservices architecture to build scalable, high-performance applications.

Databases & Storage: relational databases (MySQL, PostgreSQL, Oracle, SQL Server) and NoSQL (MongoDB), strong in writing optimized queries, stored procedures, and database performance tuning.

Cloud Platforms & Services: AWS (EC2, S3, Lambda, RDS), Microsoft Azure, and GCP for deploying and managing cloud-native applications and scalable backend services.

DevOps & Automation Tools: Docker, Kubernetes, Jenkins, GitHub Actions, and Terraform to build CI/CD pipelines, automate deployments, and manage containerized applications.

Testing & Quality Assurance: unit, integration, and API testing with JUnit, Selenium, Cypress, Postman, and PyTest, ensured software reliability through automated testing practices.

System Design & Development: REST APIs, GraphQL, and event-driven systems; applied object-oriented programming (OOP) principles and design patterns for maintainable codebases.

Agile & Collaboration Tools: Agile (Scrum/Kanban) with JIRA, Confluence, Git, Bitbucket, and Microsoft Teams; contributed to sprint planning, backlog grooming, and cross-functional collaboration.

Additional Expertise: API integration, CI/CD monitoring, version control best practices, and performance optimization for both frontend and backend applications.

PROFESSIONAL EXPERIENCE

Software Engineer | Elevance Health | IL, USA

Dec 2024 – Present

- Led the development of a **microservices-based healthcare platform** using **Java, Spring Boot**, and **AWS** (EC2, Lambda, RDS), optimizing system integration, reducing downtime by 25%, and improving efficiency by 20% for better patient data processing.
- Designed and implemented **REST APIs** to enable seamless communication between various internal and external systems, improving data retrieval speeds by 40% and enhancing user experience for 10,000+ active users.
- Systematized CI/CD pipelines** with **Jenkins** and **GitHub Actions**, achieving a 30% reduction in deployment time, enabling weekly updates, and ensuring continuous delivery without production downtime or disruptions.
- Performed **database optimization** by refactoring SQL queries and introducing indexing in **SQL Server** and **PostgreSQL**, improving query performance by 35%, ensuring faster retrieval of patient records and reducing server load by 20%.
- Collaborated within **Agile Scrum** teams to improve sprint velocity by 15%, ensuring that mission-critical healthcare features were delivered on time, while increasing cross-functional collaboration with stakeholders.

Software Engineer | Mphasis | India

Mar 2021 – Jul 2023

- Developed high-performance **React.js** and **Node.js** applications for client-facing portals, optimizing system responsiveness and achieving a 35% reduction in page load times, which significantly improved user engagement and retention.
- Engineered and maintained **cloud-native applications** on **AWS** and **GCP**, utilizing services like **Lambda**, **S3**, and **EC2**, which resulted in a 40% increase in system availability and a 25% reduction in cloud infrastructure costs.
- Guided the creation of computerized **testing frameworks** using **JUnit** and **Selenium**, increasing code coverage by 50% and reducing production defects by 30%, ensuring higher-quality releases and faster delivery cycles.
- Integrated multiple **RESTful APIs** and **GraphQL** to ensure smooth communication between applications, contributing to 40% faster data exchange, and improved backend performance, essential for large-scale client projects.
- Streamlined the deployment process using **Jenkins**, **Docker**, and **GitHub Actions**, reducing manual interventions by 70% and optimizing the development pipeline for higher accuracy and faster releases.

Associate Software Engineer Hexaware Technologies India	Jun 2019 – Feb 2021
- Designed and implemented microservices architecture using Spring Boot and Java, improving system scalability and reducing response time by 30% for high-traffic applications, enhancing customer satisfaction and system reliability. - Optimized database queries in Oracle and MySQL, reducing query execution times by 25%, which resulted in improved system reliability during peak traffic, providing consistent services for over 50,000 users. - Built and deployed cloud-native applications on AWS, leveraging EC2, S3, and Lambda, which improved system deployment efficiency by 40%, and reduced infrastructure costs by 20%. - Developed and integrated mechanized unit and integration testing using PyTest and JUnit, leading to a 98% pass rate, thereby reducing post-release defects, and ensuring robust, error-free production releases. - Collaborated with cross-functional teams using Agile Scrum methodologies via JIRA and Confluence, resulting in a 15% increase in team productivity and more efficient sprint execution to meet project deadlines.	

EDUCATION

Master’s Degree in Cybersecurity Operations	Aug-2023 - May 2025
Webster University, USA	
Bachelor’s degree in computer science engineering	July-2017 - June 2021
Sri Indu college of engineering and technology, Hyderabad, India
