

LIKITHA BHUPATHIRAJU

Data Analyst

Houston, TX, 77058 | (346) 810-2739 | Likitha3455@gmail.com | <https://www.linkedin.com/in/sailikithab/>

SUMMARY

Around 4 years' experience in data analyst with leveraging advanced analysis techniques and proficiency in a Python, R, SQL, and SAS along with NumPy, Pandas, Matplotlib, Seaborn, and SciKit-learn, enabling efficient data wrangling, statistical analysis, and predictive analysis. Well-versed in applying ML algorithms, including Regression, Random Forest, SVM, Logistic Regression, K-Means clustering, and Deep Learning models to solve complex business problems.

Expertise with 5 major DBMS i.e. MySQL, PostgreSQL, SQL Server, Oracle, and MongoDB with excellent skills in visualizations and reporting using Tableau, Power BI, and advanced Excel functions to create interactive, informative visuals.

SKILLS

Programming Languages: Python, R, MATLAB, Excel, PyCharm, git, Jupyter

Data Analysis and ML Libraries: NumPy, Pandas, Scikit-learn, TensorFlow, Keras, NLTK, OpenCV, OpenAI

Statistical Analysis & ML Techniques: Clustering, Classification, Hypothesis Testing, ANOVA, PCA, Time Series Analysis, Correlation, Multivariate Analysis, Bayes Law, A/B testing, Data warehousing.

Big Data Technologies: SQL, PySpark, Apache Kafka, Azure, Databricks, Amazon AWS, Google Cloud

Data visualization Tools: ETL, Power BI and Tableau

Databases: SQL, PostgreSQL, MS SQL Server, MongoDB, MySQL

[Certifications: Microsoft Certified: Power BI Data Analyst Associate]

EDUCATION

Master in Management Information Systems

Dec 2024

Lamar University, TX, USA

EXPERIENCE

Kaiser Permanente, USA – Data Analyst

Jan 2025 – Present

- Developed interactive dashboards in Power BI to track hypoglycemia incidents across clinics. Utilized DAX functions to compute custom metrics, such as the percentage of post-discharge hypoglycemic events, and integrated dynamic filters and trend visualizations, allowing administrators to analyze incidents by time period and patient demographics.
- Streamlined teleconsultation workflows by implementing SQL stored procedures to cleanse and deduplicate patient records, resolving inconsistencies across multiple systems. Created centralized Power BI dashboards to monitor completed consultations, pending follow-ups, and no-shows, reducing no-show rates by 10%.
- Enhanced medical reconciliation processes by analyzing medication data and physician notes using Python and SQL, identifying and correcting discrepancies that led to a 20% decrease in medication errors. Used data visualization tools like Power BI to track improvements over time and share progress across departments.
- Performed time series analysis on patient readmission rates using R, identifying seasonal patterns affecting hospital capacity.
- Provided recommendations to allocate resources effectively during peak periods, improving care efficiency by 15%.

Cigna Healthcare, USA – Data Analyst Intern

Jul 2024 – Dec 2024

- Led various data analysis projects using agile methodology, collaborating with cross-functional teams to deliver timely insights and data-driven solutions that improvised business decision-making by 20%.
- Operated Python and libraries such as NumPy, Pandas, and Matplotlib to clean, manipulate, and visualize large datasets, reducing data processing time by 30% and transforming raw data into actionable insights.
- Built and deployed machine learning models using techniques like regression, random forest, logistic regression, and support vector machines, improving predictive accuracy for key business outcomes by 25%.
- Developed and automated 10+ interactive reports in Tableau, providing stakeholders with real-time insights and visualizations that enhanced decision-making and improved KPI tracking efficiency by 15%.

Cognizant, India – Data Analyst

Oct 2019 – Dec 2022

- Led data analysis projects following SDLC and Waterfall methodologies, ensuring clear documentation, structured processes, and timely delivery of insights and solutions.
- Utilized R and SQL to analyze large datasets and designed interactive visualizations with ggplot2 and Tableau, providing actionable insights for data-driven decision-making.
- Leveraged SAS to perform advanced statistical analysis and data manipulation, creating detailed reports and visualizations that provided actionable insights, supporting key decision-making processes across departments.
- Applied machine learning algorithms such as k-Means clustering, SVM, KNN, and deep learning techniques to build predictive models, enhancing business strategies and operational efficiencies.
- Implemented self-executing data extraction and reporting processes using SQL and Excel, reducing data processing time by 40% and ensuring timely, accurate reports delivered to leadership on a weekly basis.
- Implemented and optimized ETL pipelines using Apache NiFi, ensuring efficient extraction, transformation, and loading of data from multiple sources into the data warehouse, reducing processing time by 30%.
- Developed complex DAX measures to ensure accurate, consistent, and dynamic reporting across multiple data models.
- Created automated dashboards and reports in MS Excel, using advanced features such as Pivot Tables, VLOOKUP, and HLOOKUP to support business teams in tracking KPIs and performance metrics efficiently.
