SUMMARY

Results-driven Java Developer with 6+ years of experience designing and implementing enterprise-scale applications using Java/JEE, Spring ecosystem, and modern web technologies. Demonstrated expertise in developing scalable microservices architectures, implementing CI/CD pipelines, and leveraging cloud infrastructure to deliver high-performance solutions. Proven track record in real-time data processing with Apache Kafka, securing APIs with OAuth 2.0, and orchestrating containerized applications using Kubernetes. Adept at utilizing infrastructure-as-code practices with Terraform and collaborating within Agile/Scrum environments. Committed to delivering innovative, robust solutions that drive business value and exceed technical excellence standards.

EDUCATION

Valparaiso University, Valparaiso IN || *Master of Science in Information Technology*

EMPLOYMENT HISTORY

BANK OF AMERICA | ATLANTA, GEORGIA | JAVA DEVELOPER

NOV 2024 – PRESENT

Project Summary: Served as a Java Developer within the Risk and Finance Technology team, contributing to the development, enhancement, and maintenance of enterprise-scale financial applications. Focused on risk assessment systems, regulatory reporting platforms, and financial data processing solutions while ensuring high performance, security, and reliability across large-scale banking infrastructure.

Responsibilities:

- Collaborated as a DevOps team member supporting end-to-end delivery of risk and finance applications, improving deployment stability by 35% through enhanced automation and monitoring practices.
- Developed and optimized Spring Boot microservices utilizing Java and Spring Core framework, resulting in a 30% improvement in system scalability and API response performance.
- Designed, implemented, and maintained CI/CD pipelines using Jenkins, GitHub, Maven, and XL Release, achieving a 40% reduction in build and release cycle time.
- Deployed and managed containerized applications on OpenShift platform, leveraging Ansible for automated environment configuration and reducing manual deployment effort by 45%.
- Administered artifact repositories using JFrog Artifactory, decreasing dependency conflicts and versioning issues by 25% across development, testing, and production environments.
- Implemented Redis caching solutions and supported AWS cloud services integration, reducing database load and improving application response times by 35%.
- Monitored application performance and production deployments using Splunk, Postman, and Unix/Linux tools, achieving a 30% reduction in incident resolution time through proactive logging analysis and troubleshooting.

Environment: Java, Spring Boot, Spring Core, IntelliJ IDEA, OpenShift, Ansible, GitHub, Maven, Jenkins, XLR, JFrog Artifactory, AWS, Redis, SQL, Unix/Linux, Postman, Splunk, Angular, JavaScript, CI/CD Pipelines, Jira, Agile/Scrum.

AMERICAN EXPRESS | NEW YORK NY | JAVA DEVELOPER

JUN 2021 – NOV 2024

Project Summary: The project at American Express, headquartered in New York, NY, spanned from June 2021 to the present, focusing on leveraging advanced Java/JEE technologies combined with popular front-end frameworks such as Angular, React, and VueJS. The initiative aimed to tackle several critical aspects of application development, including enhancing scalability, robustness, and efficiency, thereby providing a seamless and dynamic user experience across various platforms.

Responsibilities:

- Spearheaded Java/JEE backend and JavaScript/TypeScript frontend projects using Angular, React, and VueJS, focusing on scalability and robust system performance.
- Reduced build and deployment times by 30% through the strategic implementation of CI/CD pipelines using GitHub, Maven, and Jenkins.
- Improved data retrieval speeds by 25% using AWS tools like EMR, ECS, and Redshift, coupled with advanced SQL database optimization techniques.
- Provided critical production support and maintenance for web services, ensuring 99.9% uptime and minimal downtime while effectively troubleshooting issues.
- Collaborated closely with cross-functional teams to enhance system efficiency and user experiences using Spring Core, Spring Boot, and Spring MVC.
- Successfully optimized web application performance, increasing system scalability and robustness by implementing innovative solutions with Angular, React, and VueJS.

Environment: Java, JEE, JavaScript, TypeScript, Angular, React, VueJS, CI/CD, GitHub, Maven, Jenkins, AWS, EMR, ECS, Redshift, SQL, Spring Core, Spring Boot, Spring MVC.

CAPITAL ONE | MCLEAN, VA | JAVA DEVELOPER

JAN 2020 – MAY 2021

Project Details: As a java developer, the main project was to modernize an existing suite of applications by shifting them to a more scalable microservices architecture and improving the front-end user experience to meet the growing demands of our customer base. The application needed to handle increasing loads with high responsiveness and robust security measures due to the sensitive nature of the data being processed.

Responsibilities:

- Contribute the development of dynamic web applications using Angular 11, enhancing user interfaces with lazy loading, reactive forms, and NgRx for state management.
- Designed and deployed RESTful microservices with Spring Boot, improving scalability by integrating cloud-native patterns and Redis for distributed caching.
- Boosted system responsiveness by 40% employing Apache Kafka for real-time data streaming and establishing an event-driven architecture.
- Implemented OAuth 2.0 and JWT to secure API access and authenticate users, ensuring robust security across all application layers.
- Automated infrastructure management using Terraform and Kubernetes, resulting in a 50% reduction in deployment times in AWS environments.
- Developed and maintained CI/CD pipelines with Jenkins and GitLab CI, streamlining integration and deployment processes for continuous delivery.

Environment: Angular 11, lazy loading, reactive forms, NgRx, Spring Boot, cloud-native patterns, Redis, Apache Kafka, OAuth 2.0, JWT, Terraform, Kubernetes, AWS, Jenkins, GitLab CI.

WELLS FARGO BANK | NEW YORK, NY | JAVA DEVELOPER

JAN 2018 – DEC 2019

Project Detail: The project aimed to overhaul an existing application to address performance bottlenecks, improve user engagement, and ensure robust scalability to accommodate future growth. The application required integration with other systems and efficient data management to support complex business processes. With a focus on modernizing the technology stack and optimizing infrastructure, the project targeted substantial improvements in system performance and user experience.

Responsibilities:

- Mastered Spring technologies (Core, Boot, MVC) for robust back-end development and implemented agile methodologies for project lifecycle management.
- Optimized database operations by developing and maintaining SQL stored procedures, triggers, and joins, enhancing data management efficiency.
- Utilized SOAP-based web services (JAX-WS, JAX-RPC, JAXB) and SOAP UI for effective cross-system communication and debugging.
- Designed the presentation layer using JSP, HTML, CSS, AJAX, JavaScript, jQuery, and Apache Wicket, creating intuitive and responsive user interfaces.
- Enhanced service integration by adopting a Microservices architecture with Spring Boot, leveraging Swagger and Cassandra for better scalability.
- Increased system responsiveness by 40% with Java multithreading in image download applications, improving processing efficiency.
- Reduced deployment times by 50% on Pivotal Cloud Foundry through streamlined management of Java and PostgreSQL services.

Environment: Java/J2EE, Swagger, JSP, JSTL, EJB 2.0/3.0, Rabbit MQ, JMS, MVC, DAO, Struts, Hibernate, Spring Boot, Junit, JBoss, Oracle 8i/9i/10g, SQL Server, MySQL, Eclipse SVN, GIT, Cassandra DB, ClearCase, UML, Jenkins.

TECHNICAL SKILLS

Programming Languages:	Java/JEE (Backend Development), JavaScript/TypeScript (Dynamic Frontend Development), SQL/NoSQL (Database Management)
Frameworks and Libraries:	Spring (Boot, MVC, Security), Angular, React, VueJS
CI/CD and Version Control:	Jenkins, Maven, GitLab CI, GitHub, SVN, GIT
Databases	OracleDB, SQL Server, MySQL, MongoDB, Cassandra, Redis
Cloud Platforms:	AWS (EC2, S3, RDS, Lambda), Azure, Google Cloud Platform
Security Technologies:	OAuth 2.0, JWT, SSL/TLS, OWASP
API and Web Technologies:	REST, GraphQL, gRPC, HTML5, CSS3, Bootstrap, jQuery
Big Data and Streaming:	Apache Kafka, Hadoop, Spark
Containerization	Docker, Kubernetes
Development Methodologies	Agile, Scrum, Kanban.
