SUMMARY

QA Engineer with 2 years of experience in test automation, manual testing, and data validation across health insurance systems and AI platforms. Successfully built automated test frameworks and contributed to quality improvements.

SKILLS

Testing & QA: Test Automation, Database Testing, API Testing, Defect Tracking, Integration Testing

Languages & Tools: Python, SQL, Java, Jira, Git, Postman, Teradata, MySQL, AWS, Excel

Technologies & Frameworks : SAP BO, Looker, Behave(BDD/Gherkin), Pytest, Pandas, Selenium

Certifications: AWS Certified Cloud Practitioner(May 2025)

WORK EXPERIENCE

AI Quality Analyst

May 2025 - Present

Freelance

Remote

- Worked on platforms such as Stellar AI, Volga Partners, and Mercor performing quality validation on AI model outputs for enterprise clients.
- Evaluated 1000+ Generative AI outputs across text, image, and audio formats, identifying defects and accuracy issues.
- Created 10+ domain-specific prompts and evaluation criteria for software development tasks, evaluating outputs across 4 LLMs.
- Performed data annotation and validation following structured guidelines, ensuring dataset quality for AI model training.

Technical Consultant

January 2023 - October 2024

CGI - Cigna Healthcare

Hartford, CT

- Provided technical consulting services for Cigna Healthcare CRM transformation, delivering both software development and quality assurance solutions across multiple system migration phases.
- Built a Behavior-Driven Development (BDD) test automation framework in Python, converting 10+ manual database test scenarios into an automated validation process using Gherkin syntax.
- Performed database testing across CRM systems using SQL queries in Teradata, validating data integrity and correct UI interactions resulting in critical bug fixes that improved client satisfaction.
- Validated BI reports during Looker to SAP BO migration, identifying data and filter inaccuracies, resulting in multiple UAT approvals and successful migration of 30+ reports.
- Developed a data processing pipeline in AWS using Lambda and Node.js to extract and map CRM notification data, enabling batch processing of thousands of records.
- Developed REST API endpoints for a CGI internal employee management system using Spring Boot and Java, handling CRUD operations for 500+ employee data records.

PROJECTS

NB CARES | *Python, Django, JavaScript, HTML/CSS*

- Led a development team of 4 during university capstone project, developing a web application that enabled local non profits to collaborate and connect with low income residents, promoting self sufficiency and community support in the city.
- Continued post-graduation development and maintenance, implementing event calendar enhancements and resolving authentication issues for live production system serving multiple organizations

EDUCATION

Central Connecticut State University

B.S in Computer Science-Honors

New Britain, CT

December 2022
