

WORK EXPERIENCE

Software Engineering Intern - Guggenheim Partners (New York, NY)

June 2020 - Aug 2020

- Developed automated python system for extracting client data from Microsoft Exchange server resulting in a 5% wait time reduction
- Developed automated business intelligence gathering and IT budget tracking processes, resulting in a 5% increase in productivity
- Optimized C++ codebase through code refactoring and algorithm optimization, resulting in a 10% decrease in processing time, enhanced system performance, and improved data processing capabilities
- Collaborated with cross-functional teams including Investment Banking, Sales & Trading, and Compliance to understand process pain points, system interactions, and inefficiencies

PROJECTS

Customer Churn Prediction (Google Advanced Data Analytics Certificate)

June 2025

- Used R and SQL to clean, analyze, and visualize customer data from a telecom company
- Built logistic regression and decision tree models to identify customers who are most likely to churn
- Created interactive visualizations using ggplot2 and Shiny to help stakeholders explore churn patterns and high-risk segments
- Recommended data-driven retention strategies, contributing to a simulated improvement in customer lifetime value

Marketing Campaign Dashboard (IBM Data Analyst Certificate)

May 2025

- Analyzed large marketing datasets using Python (Pandas, NumPy) and SQL to uncover key campaign trends and ROI
- Built dynamic dashboards in Excel and Tableau visualizing KPIs including click-through rate, conversion, and engagement
- Applied A/B testing principles to evaluate campaign performance across audience segments
- Presented insights and visual storyboards to stakeholders, supporting more targeted and effective marketing decisions

Capstone Project: Smart City Traffic Pattern Analysis

Sept 2021 - May 2022

- Led the development of a traffic system designed to alleviate urban area congestion
- Leveraged advanced automated machine learning techniques and algorithms, including Decision Trees, Random Forest, and Gradient Boosting, to predict future traffic patterns
- Utilized Python and R libraries including Dplyr, Matplotlib and Seaborn, to generate intuitive data visualizations for diverse stakeholder audiences

EDUCATION

CUNY John Jay College Of Criminal Justice New York, NY

June 2022

Bachelor of Science - Computer Science and Information Security; Minor in Public Administration

Relevant Coursework: Introduction to Computer Science, Advanced Data Structures, Computer Architecture, Computer Algorithms, Statistics and Probability

SKILLS

Technical Skills: Javascript, HTML/CSS, Python, R, Java, C++, Git Version Control, Node.js, Object-oriented design, Microsoft Excel (Pivot Tables, V-Lookups, Index Match, etc.), Tableau, SQL
