**Citizenship**  
United States

### Education

- Alma Mater:** New York City College of Technology, City University of New York
- Major:** Bachelor of Technology in Computer Information System
- Specialization:** Database Systems
- GPA:** 3.81/4.00
- Graduated on:** Dec, 2022

### Technical Summary

**Relational Databases:** Oracle 18c - SQL Developer, SQL Data Modeler, MySQL, MS Access, MS SQL Server, Alteryx

**Non-relation Databases:** Redis, Neo4j, MongoDB

**Data Visualization Tools:** Orange, PowerBI, Tableau

**Programming Languages:** Java, Python, SQL, HTML, Cypher

**Software:** Eclipse, MS Visual Studio, Quickbook, Workday

### Certifications

**Mar 2021**  
Network Assurance - by Texas A&M Engineering Extension Service

**Dec 2020**  
Information Security Basics - by Texas A&M Engineering Extension Service

### Honors

**Dec 2022**  
Honors of "Cum Laude" - for outstanding result in NYC College of Technology

**Jan 2021 & Aug 2021**  
"Dean's Honor List" - for outstanding result in NYC College of Technology

**Dec 2017 & Jul 2016**  
"Presidential Scholar" & "Dean's Honor List" - for outstanding result in Northern Virginia Community College

### Languages

- English
- Bengali
- Hindi
- Urdu

### Experience

**Data Analyst, Transportation NFI Industries** Oct, 2023 – Present

- Spearheading data visualization projects by extracting millions of rows of data from data warehouse by using MS SQL Server and Alteryx; creating dashboards for visualization by using Power BI to highlight key KPIs, driving operational excellence and enhancing data-driven decision-making for department heads and senior leadership, by increasing overall customer safety and company revenue
- Creating and running SQL queries to extract, connect and clean millions of rows of data by leveraging complex SQL techniques such as group by, joins, if-else statements etc. in MS SQL Server to use for visualization
- Developing DAX queries for different types of indexing in Power BI as part of data cleaning process and then creating advanced Power BI dashboards containing major graphs/charts such as Bar Chart, Pie Chart, Matrix, Table, Trend analysis, Mapping etc. with the use of different Power BI tools – slicer, card, info etc.
- Utilizing different tools in Alteryx such as join, formula (if else), union, sort, filter, date-time etc. to clean data extracted from MS SQL Server and complex excel sheets
- Generating and sharing multiple reports from Excel and Power BI namely safety bonus report, driver pay report, driver termination across different business groups and department heads
- Granting access to new users of the dashboards and training them how to navigate the tools to generate information that they need

**Data Analyst, Database Knowledge Service Team Cooley, LLP** Mar, 2023 – Sep, 2023

- Validating the migration of data (about 4 TB in size) from HighQ (previous data storage platform) to Box (newly built data storage platform) with required steps and notes in SharePoint
- Collaborating with different teams to share the issues & errors faced in the data migration process
- Cleaning data in pre migration phase to ensure the cleaned data are transferred into the new storage platform

**IT Intern, Database Management & Development Surgery Partners** Mar, 2021 – Dec, 2022

- Generated reports by running UltiPro Payroll Extract (Payroll Database) on Visual Studio
- Created 'Insert Scripts' for new and missing records in internal Payroll Database by using complex statements using MS SQL Server
- Ran the 'Insert Scripts' in a Development Environment to verify if the script was correctly running or not; submitted a standard change so that the Production team could run this in the Production Environment
- Included NoLock to the tables so that Table Team or Database Management team could view the data in 'Read only' mode when the other team updates it which resulted into less data redundancy
- Added new 'Entities' or 'Facilities' to different applications' database by using complex SQL command such as if-else statements

### Project Work

**Accident Data Dashboard and Report** Jun, 2024 – Aug, 2024

- Purpose: A dashboard for Accident Data and a subsequent automated report was required to be created for Safety Department for their analysis and decision making
- Utilized Alteryx for initial cleaning of data by linking different data sets and removing null values
- Created a Power BI dashboard with different graphs:
  - ⇒ Pie Chart: To show percentage of different types of accidents
  - ⇒ Trend Line Chart: To show different types of accidents for last three years
  - ⇒ Stacked Bar Chart: To show different types of accidents by experience of the drivers
- Identified through dashboard that comparatively newer drivers (0 to 6 months) tend to have more accidents

**Data Warehousing Project: Census Data Analysis** Jan, 2022 – Apr, 2022

- Created a Data Warehouse Architecture (with a staging area and data marts) using data from the census of 2010 to 2020 which will provide the future trends and forecasts for employment in technology for specific minority demographics and their regions
- Initiated the SSIS Design process by performing ETL process with MS Visual Studio
- Created 'Dimension' and 'Fact' table, loaded data from staging area and uploaded the keys to create the diagram in MS SQL Server
- Initiated the SSAS Design process by analyzing basic data mining of the data by creating view, cube and deployment
- Initiated the SSRS Design process using Orange and Power BI tools for Data Visualization
